MBS MacBase Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

Function: Performs the undo operations in the last undo group (whether top-level or nested), recording the operations on the redo stack as a single group.
Notes: Raises an NSInternalInconsistencyException if any undo operations have been registered since the last enableUndoRegistration message.

41.16.25 Properties

41.16.26 Handle as Integer

MBS MacBase Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

Function: The internal uses reference to the NSUndoManager object.
Notes: (Read and Write property)

41.16.27 groupsByEvent as boolean

MBS MacBase Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value that indicates whether the receiver automatically creates undo groups around each pass of the run loop.
Notes:

True if the receiver automatically creates undo groups around each pass of the run loop, otherwise false.
(Read and Write computed property)

41.16.28 levelsOfUndo as Integer

MBS MacBase Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

Function: Returns the maximum number of top-level undo groups the receiver holds.
Notes:

An integer specifying the number of undo groups. A limit of 0 indicates no limit, so old undo groups are never dropped.

When ending an undo group results in the number of groups exceeding this limit, the oldest groups are dropped from the stack. The default is 0.
(Read and Write computed property)

Chapter 42

Cocoa Threading

42.1 class NSOperationMBS

42.1.1 class NSOperationMBS

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to do operations in Cocoa.
Notes:

Requires Mac OS X 10.5.

The NSOperation class manages the execution of a single encapsulated task. Operations are typically scheduled by adding them to an operation queue object (an instance of the NSOperationQueue class), although you can also execute them directly by explicitly invoking their start method.

Operation objects are single-shot objects, that is, they perform their task once. You cannot reuse the same NSOperation object to perform a task (or a slight variant of the task) multiple times in succession. Attempting to execute an operation that has already finished results in an exception.

When manually executing operations, you are responsible for making sure the object is ready to execute. Starting an operation that is not in the ready state generally results in an exception being thrown. If you use an operation queue to manage the execution, the NSOperationQueue object ensures that the operation is executed only when it is ready.

42.1.2 Methods

42.1.3 addDependency(op as NSOperationMBS)

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Makes the receiver dependent on the completion of the specified operation.
Notes:

op: The operation on which the operation is dependent. The same dependency should not be added more than once to the operation, and the results of doing so are undefined.

The dependent is not considered ready to execute until all of its dependent operations finish executing. If the receiver is already executing its task, adding dependencies is unlikely to have any practical effect. This method may change the isReady and dependencies properties of the dependent.

It is a programmer error to create any circular dependencies among a set of operations. Doing so can cause a deadlock among the operations and may freeze your program.

Please setup dependencies before you add the operation to a queue. Once the operation is in the queue it may be executed directly.

42.1.4 cancel

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Advises the operation object that it should stop executing its task.
Notes:

This method does not force your operation code to stop. The code for your operation must invoke the isCancelled method periodically to determine whether the operation should be stopped. Once cancelled, an operation cannot be restarted.

If the operation is already finished executing, this method has no effect. Canceling an operation that is currently in an operation queue, but not yet executing, causes it to be removed from the queue (although not necessarily right away).

42.1.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
See also:

• 42.1.6 Constructor(Handle as Integer) 9433

42.1.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: You can pass in handle to NSOperation object.
See also:

• 42.1.5 Constructor 9432

42.1.7 dependencies as NSOperationMBS()

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: the operations on which the operation is dependent.
Notes: The receiver is not considered ready to execute until all of its dependent operations finish executing.

42.1.8 dependenciesCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of the dependencies.

42.1.9 dependency(index as Integer) as NSOperationMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the dependency at the given index.
Notes:

The receiver is not considered ready to execute until all of its dependent operations finish executing.

Operations are not removed from this dependency list as they finish executing. You can therefore use this list to track all dependent operations, including those that have already finished executing. The only way to remove an operation from this list is to use the removeDependency method.

Available in Mac OS X v10.5 and later.

42.1.10 isCancelled as boolean

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a Boolean value indicating whether the operation has been cancelled.
Notes:

True if the operation was explicitly cancelled by an invocation of the operation's cancel method; otherwise, false. This method may return true even if the operation is currently executing.

Discussion
Canceling an operation does not actively stop the operation's code from executing. An operation object is responsible for calling this method periodically and stopping itself if the method returns true.

42.1.11 isConcurrent as boolean

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a Boolean value indicating whether the operation runs asynchronously.
Notes: True if the operation is asynchronous; otherwise, false if the operation runs synchronously on whatever thread started it. This method returns false by default.

42.1.12 isExecuting as boolean

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a Boolean value indicating whether the operation is currently executing.
Notes: True if the operation is executing; otherwise, false if the operation has not been started or is already finished.

42.1.13 isFinished as boolean

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether the operation is done executing.
Notes: True if the operation is no longer executing; otherwise, false.

42.1.14 isReady as boolean

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a Boolean value indicating whether the operation can be performed now.
Notes:

True if the operation can be performed now; otherwise, false.

Operations may not be ready due to dependencies on other operations or because of external conditions that might prevent needed data from being ready. The NSOperation class manages dependencies on other operations and reports the readiness of the receiver based on those dependencies.

Note: If the operation is cancelled before it starts, operations that are dependent on the completion of the receiver will never become ready.

42.1.15 Lock

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Locks the semaphore.
Example:

```
dim o as NSOperationMBS // your operation
dim myarray(-1) as window

o.lock
myarray.append window1
o.unlock
```

Notes:

You need to pair all calls to Xojo runtime into lock and unlock to make sure you don't crash. Xojo is not reentrant safe, so you need to lock.

Be aware that locking costs performance. You should do locks often, so in the time between two locks another thread can get a lock. Also you should group locks nearby so you don't waste too much time waiting for the lock. Finally you need your main application thread to run nice so it doesn't lock too much, too.

42.1.16 main

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Performs the operation's non-concurrent task.
Notes: This will just call to the work event.

42.1.17 removeDependency(op as NSOperationMBS)

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes the operation's dependence on the specified operation.
Notes: This method may change the isReady and dependencies properties of the operation.

42.1.18 start

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Begins the execution of the operation.
Notes: The default implementation of this method configures the execution environment for a non-concurrent operation and invokes the operation's main method. As part of the default configuration, this method performs several checks to ensure that the non-concurrent operation can actually run and generates appropriate KVO notifications for each change in the operation's state. If the operation's operation has already been performed, was cancelled, or is not yet ready to run, this method throws an NSInvalidArgumentException exception. If the operation is to be performed on a separate thread, this method may return before the operation itself completes on the other thread.

42.1.19 Unlock

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unlocks the semaphore.
Example:

```
dim o as NSOperationMBS // your operation
dim myarray(-1) as window

o.lock
myarray.append window1
o.unlock
```

Notes:

You need to pair all calls to Xojo runtime into lock and unlock to make sure you don't crash. Xojo is not reentrant safe, so you need to lock.

Be aware that locking costs performance. You should do locks often, so in the time between two locks another thread can get a lock. Also you should group locks nearby so you don't waste too much time waiting for the lock. Finally you need your main application thread to run nice so it doesn't lock too much, too.

42.1.20 waitUntilFinished

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Spend time waiting for the operation to finish.

42.1.21 Properties

42.1.22 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the internal used NSOperation reference.
Notes: (Read and Write property)

42.1.23 queuePriority as Integer

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The priority of the operation in an operation queue.
Notes:

The relative priority of the operation. The returned value always corresponds to one of the predefined constants. If no priority is explicitly set, this method returns NSOperationQueuePriorityNormal.

You should use priority values only as needed to classify the relative priority of non-dependent operations. Priority values should not be used to implement dependency management among different operation objects. If you need to establish dependencies between operations, use the addDependency method instead.

If you attempt to specify a priority value that does not match one of the defined constants, this method automatically adjusts the value you specify towards the NSOperationQueuePriorityNormal priority, stopping at the first valid constant value. For example, if you specified the value -10, this method would adjust that value to match the NSOperationQueuePriorityVeryLow constant. Similarly, if you specified +10, this method would adjust the value to match the NSOperationQueuePriorityVeryHigh constant.
(Read and Write computed property)

42.1.24 threadPriority as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The thread priority to use when executing the operation.
Notes:

A floating-point number in the range 0.0 to 1.0, where 1.0 is the highest priority. The default thread priority is 0.5.

Available in Mac OS X v10.6 and later.
(Read and Write computed property)

42.1.25 Events

42.1.26 Close

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The event called just before the operation object is destroyed.

42.1.27 Finished

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The event called after work has finished.
Notes:

This event is called asynchronously on the main thread, so you can do GUI stuff here to show the result.
Not called if object is released earlier.

42.1.28 Open

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The event called when the object is created.
Notes: Called on the main thread.

42.1.29 Work

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The event called for an operation to do the work.
Notes:

You should test isCancelled regularly to see whether operation was cancelled.

Please read on the ThreadMBS.Work event for more details.
(NSOperationMBS is a Mac OS X feature, but the ThreadMBS class, does nearly the same on all platforms)

42.1.30 Constants

42.1.31 NSOperationQueuePriorityHigh=4

MBS MacFrameworks Plugin, Plugin Version: 8.0.

Function: One of the constants for the priority property.
Notes: Operations receive high priority for execution.

42.1.32 NSOperationQueuePriorityLow=-4

MBS MacFrameworks Plugin, Plugin Version: 8.0.

Function: One of the constants for the priority property.
Notes: Operations receive low priority for execution.

42.1.33 NSOperationQueuePriorityNormal=0

MBS MacFrameworks Plugin, Plugin Version: 8.0.

Function: One of the constants for the priority property.
Notes: Operations receive the normal priority for execution.

42.1.34 NSOperationQueuePriorityVeryHigh=8

MBS MacFrameworks Plugin, Plugin Version: 8.0.

Function: One of the constants for the priority property.
Notes: Operations receive very high priority for execution.

42.1.35 NSOperationQueuePriorityVeryLow=-8

MBS MacFrameworks Plugin, Plugin Version: 8.0.

Function: One of the constants for the priority property.
Notes: Operations receive very low priority for execution.

42.2 class NSOperationQueueMBS

42.2.1 class NSOperationQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queues NSOperations for later execution.
Notes:

Available in Mac OS X v10.5 and later.

The NSOperationQueue class manages a set of NSOperation objects in a priority queue and regulates their execution. Operations remain in the queue until they are explicitly cancelled or finish executing. An application may create multiple operation queues, with each queue running up to its designated maximum number of operations.

A specific NSOperation object can be in only one operation queue at a time. Operations within a single queue coordinate their execution order using both priority levels and inter-operation object dependencies. Operation objects in different queues can coordinate their execution order using dependencies, which are not queue-specific.

Inter-operation dependencies provide an absolute execution order for operations. An operation object is not considered ready to execute until all of its dependent operations have finished executing. For operations that are ready to execute, the operation queue always executes the one with the highest priority relative to the other ready operations. For details on how to set priority levels and dependencies, see NSOperation Class Reference.

You should never manually start an operation while it is sitting in an operation queue. Once added, an operation stays in its queue until it finishes executing or is cancelled.

42.2.2 Methods

42.2.3 addOperation(op as NSOperationMBS)

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds the specified operation object to the operation queue.
Notes:

An operation object can be in at most one operation queue at a time and cannot be added if it is currently executing or finished. This method throws an NSInvalidArgumentException exception if any of these conditions is true.

Once added, the specified operation remains in the queue until it is executed or cancelled.

Please setup dependencies before you add the operation to a queue. Once the operation is in the queue it may be executed directly.

42.2.4 addOperations(ops() as NSOperationMBS, wait as boolean)

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds the specified array of operations to the queue.
Notes:

ops: The array of NSOperation objects that you want to add to the receiver.
wait: If true, the current thread is blocked until all of the specified operations finish executing. If false, the operations are added to the queue and control returns immediately to the caller.

An operation object can be in at most one operation queue at a time and cannot be added if it is currently executing or finished. This method throws an NSInvalidArgumentException exception if any of those error conditions are true for any of the operations in the ops parameter.

Once added, the specified operation remains in the queue until it its isFinished method returns true.

Available in Mac OS X v10.6 and later.

42.2.5 areAllOperationsFinished as boolean

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns whether all operations have been finished.
Notes: True if all operations have finished.

42.2.6 cancelAllOperations

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Cancels all queued and executing operations.
Notes: This method sends a cancel message to all operations currently in the queue or executing. Queued operations are cancelled before they begin executing. If an operation is already executing, it is up to that operation to recognize the cancellation and stop what it is doing.

42.2.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor creating a new operation queue.
Notes: On success the handle property is not 0.

42.2.8 currentQueue as NSOperationQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the operation queue that launched the current operation.
Notes:

Returns the operation queue that started the operation or nil if the queue could not be determined.

You can use this method from within a running operation object to get a reference to the operation queue that started it. Calling this method from outside the context of a running operation typically results in nil being returned.

Available in Mac OS X v10.6 and later.

42.2.9 isOneOperationExecuting as boolean

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether at least one operation is still executing.
Notes:

True if one of the operations is executing.
False if no operation is executing.

42.2.10 mainQueue as NSOperationQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the operation queue associated with the main thread.
Notes:

The returned queue executes operations serially on the main thread. The main thread's run loop controls the execution times of these operations.
Available in Mac OS X v10.6 and later.

42.2.11 operation(index as UInt32) as NSOperationMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a noperations currently in the queue at the given index.
Notes:

You can use this method to access the operations queued at any given moment. Operations remain queued until they finish their task. Therefore, the returned array may contain operations that are either executing or waiting to be executed.

Available in Mac OS X v10.5 and later.

42.2.12 operationCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of operations currently in the queue.
Notes:

The value returned by this method reflects the instantaneous number of objects in the queue and changes as operations are completed. As a result, by the time you use the returned value, the actual number of operations may be different. You should therefore use this value only for approximate guidance and should not rely on it for object enumerations or other precise calculations.

Available in Mac OS X v10.6 and later.

42.2.13 operations as NSOperationMBS()

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The operations currently in the queue.

42.2.14 waitUntilAllOperationsAreFinished

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Blocks the current thread until all of the receiver's queued and executing operations finish executing.
Notes: When called, this method blocks the current thread and waits for the receiver's current and pending operations to finish executing. While the thread is blocked, the receiver continues to launch already queued operations and monitor those that are executing. During this time, the current thread cannot add operations

to the queue, but other threads may. Once all of the pending operations are finished, this method returns.

42.2.15 Properties

42.2.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the internal used NSOperationQueue reference.
Notes: (Read and Write property)

42.2.17 isSuspended as boolean

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether the receiver is scheduling queued operations for execution.
Notes:

True if operations are being scheduled for execution; otherwise, false.
(Read and Write computed property)

42.2.18 maxConcurrentOperationCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of concurrent operations that the queue can execute.
Notes: (Read and Write computed property)

42.2.19 name as string

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of this queue.
Notes:

The default value of this string is "NSOperationQueue <id>", where <id>is the memory address of the operation queue. If you want to know when a queue's name changes, configure a KVO observer to observe the name key path of the operation queue.
Available in Mac OS X v10.6 and later.
(Read and Write computed property)

42.2.20 Constants

42.2.21 NSOperationQueueDefaultMaxConcurrentOperationCount=-1

MBS MacFrameworks Plugin, Plugin Version: 8.0.

Function: One of the constants to be used with the maxConcurrentOperationCount property.
Notes: The default maximum number of operations is determined dynamically by the NSOperationQueue object based on current system conditions.

Chapter 43

Cocoa Toolbar

43.1 class CustomNSToolbarItemMBS

43.1.1 class CustomNSToolbarItemMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The class for a custom toolbar item.
Notes:

Use this class if you need to fill events.
Subclass of the NSToolbarItemMBS class.

43.1.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5
- MBS Real Studio Plugins, version 11.3pr14
- MBS Real Studio Plugins, version 11.3pr4

43.1.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5
- MBS Real Studio Plugins, version 11.3pr14
- MBS Real Studio Plugins, version 11.3pr4

43.1.4 Methods

43.1.5 Constructor(itemIdentifier as string)

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.
Notes:

itemIdentifier: The identifier for the receiver. itemIdentifier is never seen by users and should not be localized.

The identifier is used by the toolbar and its delegate to identify the kind of the toolbar item.

43.1.6 Destructor

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

43.1.7 Events

43.1.8 Action

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: .

Function: The action event called when user clicks toolbar item.

43.1.9 allowsDuplicatesInToolbar as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: .

Function: Returns a Boolean value that indicates whether the receiver can be represented in the toolbar at more than one position.
Notes:

You use this event to override the default behavior in a subclass.
By default, if an item with the same identifier is already in the toolbar, dragging it in again will effectively move it to the new position.

If you leave this event empty (no code), you get the default behavior.

43.1.10 validate as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: .

Function: Validates a toolbar item.
Notes:

If this event is implemented and returns false, NSToolbar will disable theItem; returning true causes theItem to be enabled.

NSToolbar only calls this method for image items.
validateis called very frequently, so it must be efficient.

If you don't have code in this event, the plugin will simply return enabled value.
This methods may not be called if you set Autovalidates to true.

43.2 class CustomNSToolbarMBS

43.2.1 class CustomNSToolbarMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The toolbar class for the case you need to use the events.
Notes: Subclass of the NSToolbarMBS class.

43.2.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr13
- MBS Real Studio Plugins, version 13.1pr5
- MBS Real Studio Plugins, version 11.3pr4

43.2.4 Methods

43.2.5 Constructor(Identifier as string)

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: One of the standard toolbar item identifiers.

43.2.6 Destructor

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

43.2.7 Events

43.2.8 allowsSizeMode(mode as Integer, SuperAllows as boolean) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Whether to allow the given size mode.
Example:

```
Function allowsSizeMode(mode as Integer, SuperAllows as boolean) As boolean
# if DebugBuild then
System.DebugLog CurrentMethodName+" "+str(SuperAllows)
# endif

if mode = NSToolbarMBS.NSToolbarSizeModeSmall then
Return false
else
Return SuperAllows
end if

End Function
```

Notes:

If you have nothing in the event, the default behavior is to allow all.
You can return false for a mode to disable it. e.g. NSToolbarSizeModeSmall
SuperAllows parameter tells you if mode is enabled by default.

43.2.9 itemForItemIdentifier(identifier as string, willBeInsertedIntoToolbar as boolean) as NSToolbarItemMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: .

Function: Sent to request a new toolbar item; returns a toolbar item of the identified kind for the specified toolbar.
Notes:

itemIdentifier: The identifier for the requested item.
willBeInsertedIntoToolbar: True if the item will be immediately inserted into the toolbar. If flag is false the toolbar item is being requested for display in the toolbar customization sheet and should always be enabled or provide some other canonical representation. If you ignore this parameter the same toolbar item will be used in the toolbar and in the customization sheet.
Return Value
The toolbar item for the specified toolbar and identifier. Return nil to indicate that the identified kind of toolbar item is not supported. When an item is requested again, you may return the same NSToolbarItem object returned earlier or a different instance.

Implement this method to create new toolbar item instances. This method is called lazily on behalf of a toolbar instance, which must be the sole owner of the toolbar item. A toolbar may ask again for a kind of toolbar item already supplied to it, in which case this method may return the same toolbar item it returned before or a different one. If your delegate services multiple toolbars, each attached to a different window, it is best to return a different item for each toolbar—an NSToolbarItem object can only be in one toolbar at a time.

If the item is a custom view item, the NSView object must be fully formed when the item is returned. Do not assume that the returned item is going to be added as an active item in the toolbar, as it could be that it will be used only in the customization palette. (The customization palette makes a copy of the returned item.)

This event must be implemented if the associated toolbar is created programatically.

43.2.10 toolbarAllowedItemIdentifiers as string()

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: .

Function: Sent to discover the allowed item identifiers for a toolbar.
Notes:

An array of toolbar item identifiers for toolbar, specifying the contents and the order of the items in the configuration palette.

Every allowed item must be explicitly listed, even the standard ones. The identifiers returned should include all of those returned by toolbarDefaultItemIdentifiers:.

This event must be implemented if the associated toolbar is created programatically.

43.2.11 toolbarDefaultItemIdentifiers as string()

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: .

Function: Sent to discover the default item identifiers for a toolbar.
Notes:

Return an array of toolbar item identifiers for toolbar, specifying the contents and the order of the items in the default toolbar configuration.

During initialization of toolbar, this method is called only if a toolbar configuration for the identifier of toolbar is not found in the user preferences. This method is called during initialization of the toolbar customization palette.

This event must be implemented if the associated toolbar is created programatically.

43.2.12 toolbarDidRemoveItem(item as NSToolbarItemMBS, notification as NSNotificationMBS)

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: .

Function: Sent just after an item has been removed from a toolbar.
Notes: This method allows you to remove information related to the item that may have been cached.

43.2.13 toolbarItemAction(item as NSToolbarItemMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: The action event called when user clicks toolbar item.
Notes: Only for instances of CustomNSToolbarItemMBS, the plugin can forward the allowsDuplicatesInToolbar event to the CustomNSToolbarMBS, so you can handle it in a central place for all toolbar items.

43.2.14 toolbarItemAllowsDuplicatesInToolbar(item as NSToolbarItemMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Returns a Boolean value that indicates whether the receiver can be represented in the toolbar at more than one position.
Notes:

You use this event to override the default behavior in a subclass.
By default, if an item with the same identifier is already in the toolbar, dragging it in again will effectively move it to the new position.

If you leave this event empty (no code), you get the default behavior.

Only for instances of CustomNSToolbarItemMBS, the plugin can forward the allowsDuplicatesInToolbar event to the CustomNSToolbarMBS, so you can handle it in a central place for all toolbar items.

43.2.15 toolbarItemValidate(item as NSToolbarItemMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Validates a toolbar item.
Notes:

If this event is implemented and returns false, NSToolbar will disable theItem; returning true causes theItem to be enabled.

NSToolbar only calls this method for image items.
validateis called very frequently, so it must be efficient.

If you don't have code in this event, the plugin will simply return enabled value.
This methods may not be called if you set Autovalidates to true.

Only for instances of CustomNSToolbarItemMBS, the plugin can forward the allowsDuplicatesInToolbar event to the CustomNSToolbarMBS, so you can handle it in a central place for all toolbar items.

43.2.16 toolbarSelectableItemIdentifiers as string()

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: .

Function: Sent to discover the selectable item identifiers for a toolbar.
Notes:

Return an array of item identifiers that should indicate selection in the specified toolbar.

Toolbars that need to indicate item selection should return an array containing the identifiers of the selectable toolbar items.

If implemented, toolbar will display the currently selected item with a visual highlight. Clicking on an item whose identifier is selectable will automatically update the toolbar's selected item identifier, when possible. Clicking an item whose identifier is not selectable will not update the toolbar's selected item identifier.

43.2.17 toolbarWillAddItem(item as NSToolbarItemMBS, notification as NSNotificationMBS)

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: .

Function: Sent just before a new item is added to a toolbar.
Notes: If you need to cache a reference to a toolbar item or need to set up some initial state before a toolbar item is added, this is where to do it.

43.3 class NSToolbarItemGroupMBS

43.3.1 class NSToolbarItemGroupMBS

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: NSToolbarItemGroup is a subclass of NSToolbarItem which contains subitems.
Notes:

The views and labels of the subitems are used, but the parent's attributes take precedence.
Subclass of the NSToolbarItemMBS class.

43.3.4 Methods

43.3.5 Constructor(itemIdentifier as string)

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: The constructor.
Notes:

itemIdentifier: The identifier for the receiver. itemIdentifier is never seen by users and should not be localized.

The identifier is used by the toolbar and its delegate to identify the kind of the toolbar item.

43.3.6 SetSubItems(items() as NSToolbarItemMBS)

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Sets the subitems for the receiver.
Notes:

subitems: An array of instances of NSToolbarItem objects that form the subitems for the receiver.

You should call this method to set the subitems before returning the item to the toolbar. NSToolbarItemGroup objects cannot contain other NSToolbarItemGroup objects as subitems.

43.3.7 subitems as NSToolbarItemMBS()

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Returns the subitems for the receiver.
Notes: By default, an NSToolbarItemGroup instance has an empty array of subitems.

43.4 class NSToolbarItemMBS

43.4.1 class NSToolbarItemMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The class for Cocoa toolbar items.
Notes: Each item in an NSToolbar is an instance of NSToolbarItem.

43.4.4 Methods

43.4.5 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Constructor for creating an instanced based on an existing handle.
Notes:

Useful if you get a NSToolbarItem reference from a declare.
The object is retained.
See also:

- 43.4.6 Constructor(itemIdentifier as string) 9457

43.4.6 Constructor(itemIdentifier as string)

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.
Notes:

itemIdentifier: The identifier for the receiver. itemIdentifier is never seen by users and should not be localized.

The identifier is used by the toolbar and its delegate to identify the kind of the toolbar item.
See also:

- 43.4.5 Constructor(Handle as Integer) 9457

43.4.7 NSToolbarCloudSharingItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: A standard toolbar item identifier for cloud sharing via NSSharingServiceNameCloudSharing.
Notes:

It validates itself and modifies its appearance by using the NSCloudSharingValidation protocol. It sends performCloudSharing to the firstResponder.
Requires macOS 10.12 or newer.

43.4.8 NSToolbarCustomizeToolbarItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: One of the standard toolbar item identifiers.
Notes:

The Customize item. Shows the customization palette.

Deprecated. In OS X v10.7 and later the customization icon has been removed from the toolbar and customization palettes. This constant is ignored.

43.4.9 NSToolbarFlexibleSpaceItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: One of the standard toolbar item identifiers.
Notes: The Flexible Space item.

43.4.10 NSToolbarPrintItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: One of the standard toolbar item identifiers.
Notes: The Print item. Sends printDocument to firstResponder, but you can change this in toolbarWillAddItem if you need to do so.

43.4.11 NSToolbarSeparatorItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: One of the standard toolbar item identifiers.
Notes: The Separator item.

43.4.12 NSToolbarShowColorsItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: One of the standard toolbar item identifiers.
Notes: The Colors item. Shows the color panel.

43.4.13 NSToolbarShowFontsItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: One of the standard toolbar item identifiers.
Notes: The Fonts item. Shows the font panel.

43.4.14 NSToolbarSidebarTrackingSeparatorItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: One of the standard identifiers.
Notes: Requires macOS 11.0 or newer.

43.4.15 NSToolbarSpaceItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: One of the standard toolbar item identifiers.
Notes: The Space item.

43.4.16 NSToolbarToggleSidebarItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: A standard toolbar item identifier for sidebars.
Notes:

It sends toggleSidebar to the firstResponder.
Requires macOS 10.11 or newer.

43.4.17 validate

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: This method is called by the receiver's toolbar during validation.
Notes: You may invoke this method directly if you have disabled automatic validation for an item—typically you do this for performance reasons if your validation code is slow.

43.4.18 Properties

43.4.19 allowsDuplicatesInToolbar as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value that indicates whether the receiver can be represented in the toolbar at more than one position.
Notes:

Returns true to allow dragging the receiver into the toolbar at more than one position, otherwise false.

You use this method by overriding it in a subclass to always return true; typically, you wouldn't call it. By default, if an item with the same identifier is already in the toolbar, dragging it in again will effectively move it to the new position.
(Read only property)

43.4.20 autovalidates as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Whether this item auto validates.
Notes:

By default NSToolbar automatically invokes the receiver's validate method on a regular basis. If your validate method is time consuming, you can disable auto validation on a per toolbar item basis.
(Read and Write property)

43.4.21 Bordered as Boolean

MBS MacControls Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: When set on an item without a custom view, the button produced will have a bordered style.
Notes:

Defaults to false.

Requires macOS 10.15 or newer.
(Read and Write property)

43.4.22 ClassName as String

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: The name of this NSWindow class.
Notes: (Read only property)

43.4.23 ClassPath as String

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: The path of this NSView class.
Notes:

Useful for debugging to know what super classes the window has.
(Read only property)

43.4.24 Enabled as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the receiver is enabled.
Notes:

For a view item, this method calls isEnabled/setEnabled on the view if it responds and returns the result.
(Read and Write property)

43.4.25 Handle as Integer

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The internal reference to the NSToolbarItem object.
Notes: (Read and Write property)

43.4.26 image as NSImageMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The image for this toolbar item.
Notes:

For a custom view item (one whose view has already been set), this method calls setImage on the view if it responds. If image contains multiple representations, NSToolbarItem chooses the most appropriately sized representation when displaying.
(Read and Write property)

43.4.27 itemIdentifier as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The receiver's identifier.
Notes:

Returns the receiver's identifier, which was provided in the initializer.
(Read only property)

43.4.28 label as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The label, which normally appears in the toolbar and in the overflow menu.
Notes:

The length of the label should be appropriate and not too long. The label may be empty.
(Read and Write property)

43.4.29 MaxSize as NSSizeMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The maximum size.
Notes: (Read and Write property)

43.4.30 menuFormRepresentation as NSMenuItemMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The menu form representation.
Notes:

By default, this method returns nil, even though there is a default menu form representation.
(Read and Write property)

43.4.31 MinSize as NSSizeMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The minimum size.
Notes: (Read and Write property)

43.4.32 Navigational as Boolean

MBS MacControls Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Whether or not the item behaves as a navigation item (i.e. back/forward) in the toolbar.
Notes:

Navigation items may be specially positioned by the system outside the normal list of items of the toolbar in the order specified by toolbarDefaultItemIdentifiers.

Requires macOS 11.0 or newer.
(Read and Write property)

43.4.33 paletteLabel as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The label that appears when the receiver is in the customization palette.
Notes:

An item must have a palette label if the customization palette is to be used, and for most items it is reasonable to set paletteLabel to be the same value as label. One reason for paletteLabel to be different from label would be if it's more descriptive; another might be if there is no label.
(Read and Write property)

43.4.34 tag as Integer

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The tag value.
Notes:

You can use the tag for your own custom purpose.
(Read and Write property)

43.4.35 Title as String

MBS MacControls Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Set and get the title of an item.
Notes:

For custom views, this method will call setTitle:/title on the view if it responds.
(forwards to -view if it responds)

Requires macOS 10.15 or newer.
(Read and Write property)

43.4.36 toolbar as NSToolbarMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Returns the toolbar that is using the receiver.
Notes: (Read only property)

43.4.37 toolTip as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The tooltip to be used when the receiver is displayed in the toolbar.
Notes: (Read and Write property)

43.4.38 view as NSViewMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The custom view for this item.
Notes:

view: The view for the receiver. The view and all of its contents must conform to the NSCoding protocol if the toolbar supports customization.

Note that many of the set/get methods are implemented by calls forwarded to view, if it responds to it.
(Read and Write property)

43.4.39 visibilityPriority as Integer

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The visibility priority.
Notes: (Read and Write property)

43.4.40 Constants

43.4.41 NSToolbarItemVisibilityPriorityHigh = 1000

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the visibility priority constants.
Notes:

When a toolbar does not have enough space to fit all its items, it must push some items into the overflow menu. These values allow you to suggest a priority for a toolbar item.

Items with this priority are less inclined to be pushed to the overflow menu.

43.4.42 NSToolbarItemVisibilityPriorityLow = -1000

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the visibility priority constants.
Notes:

When a toolbar does not have enough space to fit all its items, it must push some items into the overflow menu. These values allow you to suggest a priority for a toolbar item.

Items with this priority will be the first items to be pushed to the overflow menu.

43.4.43 NSToolbarItemVisibilityPriorityStandard = 0

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the visibility priority constants.
Notes:

When a toolbar does not have enough space to fit all its items, it must push some items into the overflow menu. These values allow you to suggest a priority for a toolbar item.

The default visibility priority.

43.4.44 NSToolbarItemVisibilityPriorityUser = 2000

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the visibility priority constants.
Notes:

When a toolbar does not have enough space to fit all its items, it must push some items into the overflow menu. These values allow you to suggest a priority for a toolbar item.

Items with this priority are the last to be pushed to the overflow menu. Only the user should set items to this priority.

43.5 class NSToolbarMBS

43.5.1 class NSToolbarMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: NSToolbar and NSToolbarItem provide the mechanism for a titled window to display a toolbar just below its title bar.

43.5.4 Methods

43.5.5 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Constructor for creating an instanced based on an existing handle.
Notes:

Useful if you get a NSToolbar reference from a declare.
The object is retained.
See also:

• 43.5.6 Constructor(Identifier as string) 9468

43.5.6 Constructor(Identifier as string)

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.
Notes:

Initializes a newly allocated toolbar with the specified identifier.
identifier is never seen by users and should not be localized.
See also:

• 43.5.5 Constructor(Handle as Integer) 9467

43.5.7 insertItemWithItemIdentifier(identifier as string, atIndex as Integer)

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Inserts the specified item at the specified index.
Notes:

Identifier: The identifier of the item to insert.
index: The index at which to insert the item.

If the toolbar needs a new instance, it will get it from itemForItemIdentifier. Typically, you should not call this method; you should let the user reconfigure the toolbar.

43.5.8 items as NSToolbarItemMBS()

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Returns the receiver's current items, in order.

43.5.9 NSToolbarDidRemoveItemNotification as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification identifiers.
Notes: Posted after an item is removed from a toolbar. The notification item is the NSToolbar object that had an item removed from it. The userInfo dictionary contains the following information: item: The NSToolbarItem object that was removed.

43.5.10 NSToolbarWillAddItemNotification as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification identifiers.
Notes: Posted before a new item is added to the toolbar. The notification item is the NSToolbar object having an item added to it. The userInfo dictionary contains the following information: item: The NSToolbarItem object being added.

43.5.11 removeItemAtIndex(index as Integer)

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Removes the specified item.
Notes:

Typically, you should not call this method; you should let the user reconfigure the toolbar.

Index is zero based.

43.5.12 runCustomizationPalette

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Runs the receiver's customization palette.

43.5.13 validateVisibleItems

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Called on window updates to validate the visible items.
Notes:

You typically use this method by overriding it in a subclass. The default implementation of this method iterates through the list of visible items, sending each a validate message. Override it and call super if you want to know when this method is called.

In Mac OS X v 10.6 and later toolbars no longer automatically validate for some events, including: NSLeftMouseDragged, NSRightMouseDragged, NSOtherMouseDragged, NSMouseEntered, NSMouseExited, NSScrollWheel, NSCursorUpdate, NSKeyDown. In addition, validation for NSKeyUp and NSFlagsChanged events is deferred with the timer restarting for every new deferrable event. So a sequence of key events will not trigger any validation at all, until either a pause of .85 seconds, or an event other than NSKeyUp or

NSFlagsChanged is processed. This change was made as an optimization.

To trigger validation for a single toolbar manually, send the toolbar a validateVisibleItems message. To trigger validation for all toolbars, invoke NSApplication's setWindowsNeedUpdate passing true.

43.5.14 visibleItems as NSToolbarItemMBS()

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Returns the receiver's currently visible items.
Notes: Items in the overflow menu are not considered visible.

43.5.15 Properties

43.5.16 allowsExtensionItems as Boolean

MBS MacControls Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the toolbar can add items for Action extensions.
Notes:

When true, the toolbar can dynamically create toolbar items for Action extensions in the toolbar configuration panel. To be included, an extension needs to set the NSExtensionServiceAllowsToolbarItem key to true in its Info.plist.

The default value is false.
(Read and Write property)

43.5.17 allowsUserCustomization as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether users are allowed to modify the toolbar.
Notes:

True if users are allowed to modify the toolbar, false otherwise. The default is false.

If the value is false, then the Customize Toolbar… menu item is disabled and other modification is disabled. This attribute does not affect the user's ability to show or hide the toolbar.
(Read and Write property)

43.5.18 autosavesConfiguration as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the receiver autosaves its configuration.
Notes:

True if the receiver autosaves its configuration, otherwise false. The default is false.

When autosaving is enabled, the receiver will automatically write the toolbar settings to user defaults if the toolbar configuration changes. The toolbar's configuration is identified in user defaults by the toolbar identifier. If there are multiple toolbars active with the same identifier, they all share the same configuration.
(Read and Write property)

43.5.19 centeredItemIdentifier as String

MBS MacControls Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: The center item identifier.
Notes:

The item with the specified identifier will be positioned in the absolute center of the Toolbar relative to the window assuming space allows. When the window shrinks, the highest priority is to have the most items visible. Thus, centering is broken first (it'll be pushed off to the left/right as necessary). Next, items will be shrunk down a little at a time towards their min size, at the same rate. Finally, items will be removed based on their visibility priority.

This property is archived.
(Read and Write property)

43.5.20 configurationDictionary as dictionary

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The receiver's configuration as a dictionary.
Notes:

Set/get a dictionary containing configuration information for the toolbar.

Contains displayMode, isVisible, and a list of the item identifiers currently in the toolbar.
Do not depend on any details of the normal contents of a configuration dictionary.
(Read and Write property)

43.5.21 configurationDictionaryData as Memoryblock

MBS MacControls Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The receiver's configuration as a memoryblock.
Notes:

Set/get a memoryblock containing configuration information for the toolbar.

Contains displayMode, isVisible, and a list of the item identifiers currently in the toolbar.
Do not depend on any details of the normal contents of a configuration dictionary.

you can read/write the data to preferences.
(Read and Write property)

43.5.22 customizationPaletteIsRunning as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value that indicates whether the receiver's customization palette is running (in use).
Notes:

True if the receiver's customization palette is running, otherwise false.
(Read only property)

43.5.23 displayMode as Integer

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The receiver's display mode.
Notes: (Read and Write property)

43.5.24 fullScreenAccessoryView as NSViewMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The fullscreen mode accessory view.
Notes:

Requires Mac OS X 10.7.
(Read and Write property)

43.5.25 fullScreenAccessoryViewMaxHeight as Double

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The fullscreen mode accessory view's maximum height.
Notes:

Requires Mac OS X 10.7.
(Read and Write property)

43.5.26 fullScreenAccessoryViewMinHeight as Double

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The fullscreen mode accessory view's minimum height.
Notes:

Requires Mac OS X 10.7.
(Read and Write property)

43.5.27 Handle as Integer

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The internal reference for this object.
Notes: (Read and Write property)

43.5.28 identifier as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Returns the receiver's identifier.
Notes:

Returns the receiver's identifier, a string used by the class to identify the kind of toolbar.

Within the application all toolbars with the same identifier are synchronized to maintain the same state, including for example, the display mode and item order. The identifier is used as the autosave name for toolbars that save their configuration.
(Read only property)

43.5.29 selectedItemIdentifier as string

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The selected item to the specified toolbar item.
Notes:

Typically, a toolbar will manage the selection of items automatically. This method can be used to select identifiers of custom view items, or to force a selection change. See toolbarSelectableItemIdentifiers for more details. If itemIdentifier is not recognized by the receiver, the current selected item identifier does not change.
(Read and Write property)

43.5.30 showsBaselineSeparator as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the toolbar shows the separator between the toolbar and the main window contents.
Notes:

True if the toolbar shows the separator between the toolbar and the main window contents, otherwise false. The default is true.
(Read and Write property)

43.5.31 sizeMode as Integer

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The size mode.
Notes:

If there is no icon of the given size for a toolbar item, the toolbar item creates one by scaling an icon of another size.
(Read and Write property)

43.5.32 toolbarView as NSViewMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The internal NSView used for displaying the toolbar.
Notes:

Useful to query values like the bounds of the toolbar.

Works for 64-bit with 17.5 version, but returns nil in older versions.
(Read only property)

43.5.33 visible as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Whether the receiver is visible or hidden.
Notes:

True to indicate the receiver should be made visible, false to indicate it should be hidden.
(Read and Write property)

43.5.34 Constants

43.5.35 NSToolbarDisplayModeDefault = 0

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the constants for displayMode property.
Notes: The default display mode.

43.5.36 NSToolbarDisplayModeIconAndLabel = 1

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the constants for displayMode property.
Notes: The toolbar will display icons and labels.

43.5.37 NSToolbarDisplayModeIconOnly = 2

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the constants for displayMode property.
Notes: The toolbar will display only icons.

43.5.38 NSToolbarDisplayModeLabelOnly = 3

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the constants for displayMode property.
Notes: The toolbar will display only labels.

43.5.39 NSToolbarSizeModeDefault = 0

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the constants for the sizeMode property.
Notes: The toolbar uses the system-defined default size, which is NSToolbarSizeModeRegular.

43.5.40 NSToolbarSizeModeRegular = 1

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the constants for the sizeMode property.
Notes: The toolbar uses regular-sized controls and 32 by 32 pixel icons.

43.5.41 NSToolbarSizeModeSmall = 2

MBS MacControls Plugin, Plugin Version: 11.3.

Function: One of the constants for the sizeMode property.
Notes: The toolbar uses small-sized controls and 24 by 24 pixel icons.

Chapter 44

Collaboration

44.1 class CBGroupIdentityMBS

44.1.1 class CBGroupIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: An object of the CBGroupIdentity class represents a group identity and is used for viewing the attributes of group identities from an identity authority.
Example:

```
// get staff group
dim a as CBIdentityAuthorityMBS = CBIdentityAuthorityMBS.localIdentityAuthority
dim i as CBGroupIdentityMBS = CBGroupIdentityMBS.groupIdentityWithPosixGID(20,a)
MsgBox i.fullName
```

Notes:

The principal attributes of a CBGroupIdentity object are a POSIX group identifier (GID) and a list of members.
Available in OS X v10.5 and later.
Subclass of the CBIdentityMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

44.1.2 Blog Entries

- Collaboration Framework: CBIdentityPickerMBS class

44.1.3 Blog Entries

- Collaboration Framework: CBIdentityPickerMBS class

44.1.4 Methods

44.1.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The private constructor.

44.1.6 copy as CBGroupIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

44.1.7 groupIdentityWithPosixGID(groupID as Integer, authority as CBIdentityAuthorityMBS) as CBGroupIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the group identity with the given POSIX GID in the specified identity authority.
Example:

```
// get staff group
dim a as CBIdentityAuthorityMBS = CBIdentityAuthorityMBS.localIdentityAuthority
dim i as CBGroupIdentityMBS = CBGroupIdentityMBS.groupIdentityWithPosixGID(20,a)

MsgBox i.fullName
```

Notes:

groupID: The GID of the group identity you are searching for.
authority: An identity authority in which to search for the group identity.

Returns the group identity object with the given GID in the specified identity authority, or nil if no identity exists with the specified GID.

44.1.8 members as CBIdentityMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: An array of CBIdentity objects each representing a member of the group identity.
Example:

```
// get staff group
dim a as CBIdentityAuthorityMBS = CBIdentityAuthorityMBS.localIdentityAuthority
dim i as CBGroupIdentityMBS = CBGroupIdentityMBS.groupIdentityWithPosixGID(20,a)

MsgBox i.fullName

dim members() as CBIdentityMBS = i.members
for each m as CBIdentityMBS in members
MsgBox m.fullName
next
```

Notes: This method only returns direct members of a group, it does not return members of members. Both user and group identities can be members of a group, but a group cannot be a member of itself. You also cannot have "circular" membership, i.e. a group be a member of another group that is a member of the first group.

44.1.9 posixGID as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the POSIX GID of the identity.
Notes: The POSIX GID is an integer that can identify a group within an identity authority. GIDs are not guaranteed to be unique within an identity authority.

44.2 class CBIdentityAuthorityMBS

44.2.1 class CBIdentityAuthorityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: An identity authority is a database that stores information about identities.
Notes:

The CBIdentityAuthority class defines one or more identity authorities. This database can be searched for identities in conjunction with the CBIdentity class factory methods.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

44.2.2 Blog Entries

- Collaboration Framework: CBIdentityPickerMBS class

44.2.3 Blog Entries

- Collaboration Framework: CBIdentityPickerMBS class

44.2.4 Methods

44.2.5 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Whether this class is available.
Example:

```
if CBIdentityAuthorityMBS.Available then
MsgBox "CBIdentityAuthorityMBS class is available"
else
MsgBox "CBIdentityAuthorityMBS class is not available"
end if
```

Notes: Returns true on Mac OS X 10.5 and newer.

44.2.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The private constructor.

44.2.7 CSIdentityAuthority as Variant

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns an identity authority for use with the Core Services Identity API.
Notes:

Returns CSIdentityAuthorityMBS object.
This method, along with identityAuthorityWithCSIdentityAuthority:, is used for interoperability with the Core Services Identity API.
Available in OS X v10.5 and later.

44.2.8 defaultIdentityAuthority as CBIdentityAuthorityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns an identity authority that contains the identities in both the local and the network-bound authorities.
Example:

MsgBox CBIdentityAuthorityMBS.defaultIdentityAuthority.localizedName

Notes: The default identity authority is the logical union of the identities in the local and managed authorities.

44.2.9 identityAuthorityWithCSIdentityAuthority(CSIdentityAuthority as Variant) as CBIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns an identity authority specified by a given Core Services Identity authority object.
Notes:

CSIdentityAuthority: The Core Services Identity opaque object. Must be a CSIdentityAuthorityMBS.
Returns the identity authority object for use with the Collaboration framework.
This method, along with CSIdentityAuthority, is used for interoperability with the Core Services Identity API.
Available in OS X v10.5 and later.

44.2.10 localIdentityAuthority as CBIdentityAuthorityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the identity authority on the local system.
Example:

MsgBox CBIdentityAuthorityMBS.localIdentityAuthority.localizedName

Notes: Any identities stored on the local system are contained within this identity authority.

44.2.11 localizedName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the localized name of the identity authority.
Notes: The computer's name if the authority is local, or Managed Network Directory if the authority is managed.

44.2.12 managedIdentityAuthority as CBIdentityAuthorityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the identity authority that contains all the identities in bound network directory servers.
Example:

MsgBox CBIdentityAuthorityMBS.managedIdentityAuthority.localizedName

Notes: If you are bound to a network directory server (such as an LDAP server) that has an identity authority, use this method to search those authorities.

44.2.13 Properties

44.2.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

44.3 class CBIdentityMBS

44.3.1 class CBIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A CBIdentity object is used for accessing the attributes of an identity stored in an identity authority.
Notes:

You can use an identity object for finding identities, and storing them in an access control list (ACL). If you need to edit these attributes, take advantage of the CSIdentity class in Core Services.

You can obtain a CBIdentity object from one of the following class factory methods: identityWithName, identityWithUUIDString, identityWithPersistentReference, or identityWithCSIdentity.

There are two subclasses of CBIdentity: CBGroupIdentity and CBUserIdentity. If you are working specifically with a group identity, use CBGroupIdentityMBS. Similarly, if you are working with a user identity, use CBUserIdentityMBS.

see also
http://developer.apple.com/library/mac/# documentation/Networking/Conceptual/IdentityServices_Prog-Guide/Introduction/Introduction.html# //apple_ref/doc/uid/TP40004490
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

44.3.2 Blog Entries

- Collaboration Framework: CBIdentityPickerMBS class

44.3.3 Blog Entries

- Collaboration Framework: CBIdentityPickerMBS class

44.3.4 Methods

44.3.5 aliases as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns an array of aliases (alternate names) for the identity.
Notes:

Returns an array of strings containing the alternate names for the identity.
An identity can have zero or more aliases. Like the full and short names, two identities cannot share an alias.

44.3.6 authority as CBIdentityAuthorityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the identity authority where the identity is stored.

44.3.7 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.5 and newer.

44.3.8 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The private constructor.

44.3.9 copy as CBIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

44.3.10 CSIdentity as Variant

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns an opaque object for use with the Core Services Identity API.
Notes:

This method, along with identityWithCSIdentity, is used for interoperability with the Core Services Identity API.
Available in OS X v10.5 and later.

44.3.11 emailAddress as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the email address of an identity.
Notes: The email address of an identity or "" if none exists.

44.3.12 fullName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the full name of the identity.

44.3.13 identityWithCSIdentity(CSIdentity as Variant) as CBIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns an identity object created from the specified Core Services Identity opaque object.
Notes:

csIdentity: The Core Services Identity opaque object. Must be a CSIdentityMBS object.

Returns the identity object for use with the Collaboration framework.
This method is used for interoperability with the Core Services Identity API.

Available in OS X v10.5 and later.

44.3.14 identityWithName(name as string, authority as CBIdentityAuthorityMBS) as CBUserIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the identity object with the given name from the specified identity authority.
Example:

```
dim name as string = "cs" // put your name here
dim a as CBIdentityAuthorityMBS = CBIdentityAuthorityMBS.localIdentityAuthority
dim i as CBIdentityMBS = CBIdentityMBS.identityWithName(name, a)

MsgBox i.fullName+": "+Join(i.aliases,", ")
```

Notes:

name: The name of the identity.
authority: The identity authority to search.

Returns the identity object, or nil if no identity is found with the specified name.
The name is compared against all valid identity names, including full names, short names, email addresses, and aliases.

44.3.15 identityWithPersistentReference(ref as Memoryblock) as CBUserIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the identity object matching the persistent reference data.
Notes:

ref: The persistent data object that refers to an identity.

Returns the identity object matching the persistent data object, or nil if the identity is not found.
A persistent reference is an opaque data object suitable for persistent storage.

44.3.16 identityWithUUIDString(uuid as string, authority as CBIdentityAuthorityMBS) as CBUserIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the identity object with the given UUID from the specified identity authority.
Notes:

uuid: The UUID of the identity you are searching for.
authority: The identity authority to search.

Returns the identity object, or nil if no identity is found with the matching criteria.

44.3.17 image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the image associated with an identity.
Notes: The image associated with an identity, or nil if none exists.

44.3.18 isHidden as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value indicating the state of the identity's hidden property.
Notes:

A hidden identity does not show up in the Identity Picker. A hidden identity refers to system identities such as root, www, and wheel.
True if the identity is hidden; false if it is not.

44.3.19 isMemberOfGroup(g as CBGroupIdentityMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value indicating whether the identity is a member of the specified group.
Notes:

g: The group to check for membership.

Returns true if the identity is a member of the group; false if it is not.

44.3.20 persistentReference as MemoryBlock

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns a persistent reference to store a reference to an identity.
Notes:

Returns a memoryblock that uniquely references an identity.

A persistent reference data object is an object generated from an identity. Persistent data objects can be written to and read from a file, making them extremely useful for storing identities in an ACL.

44.3.21 posixName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the POSIX name of the identity.
Notes: The POSIX name is also referred to as the "short name" for an identity. It can only contain the characters A-Z, a-z, 0-9, -, _, ., and @.

44.3.22 UUIDString as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the UUID of the identity as a string.
Notes: The UUID string is generated so it is unique across all identity authorities. When storing ACLs, one method is to store the UUID of each identity. However, it is recommended that you use a persistent data object instead (see persistentReference).

44.3.23 Properties

44.3.24 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

44.4 class CBIdentityPickerMBS

44.4.1 class CBIdentityPickerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A CBIdentityPicker object allows a user to select identities—for example, user or group objects—that it wants one or more services or shared resources to have access to.
Example:

```
dim c as new CBIdentityPickerMBS
c.Title = "Please choose your identity"

dim n as Integer = c.runModal
if n = c.NSOKButton then
for each i as CBIdentityMBS in c.identities
MsgBox i.fullName
next
end if
```

Notes: An identity picker can be displayed either as an application-modal dialog or as a sheet attached to a document window. An identity picker returns the selected records to be added to access control lists using Collaboration. If a selected record is not a user or group identity, then an identity picker prompts the end user for additional information—such as a password—to promote that record to a sharing account.

44.4.2 Blog Entries

- Collaboration Framework: CBIdentityPickerMBS class

44.4.3 Blog Entries

- Collaboration Framework: CBIdentityPickerMBS class

44.4.4 Methods

44.4.5 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.5 and newer.

44.4.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

44.4.7 identities as CBIdentityMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns an array of the identities selected using the identity picker.

44.4.8 runModal as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Runs the receiver as an application-modal dialog.
Notes:

NSOKButton if the user selected OK; otherwise, NSCancelButton.
The receiver may create identities for selected records if necessary.

44.4.9 runModalForWindow(win as DesktopWindow)

MBS MacFrameworks Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Runs the receiver modally as a sheet attached to a specified window.
Notes:

window: The parent window for the sheet.

Calls identityPickerDidEnd event later.
See also:

- 44.4.10 runModalForWindow(win as window) 9490

44.4.10 runModalForWindow(win as window)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Runs the receiver modally as a sheet attached to a specified window.
Notes:

window: The parent window for the sheet.

Calls identityPickerDidEnd event later.
See also:

- 44.4.9 runModalForWindow(win as DesktopWindow) 9490

44.4.11 Properties

44.4.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

44.4.13 allowsMultipleSelection as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Allows a user to make select multiple identities.
Notes:

By default, you cannot select multiple records.
Set to true if you can select multiple records; otherwise, false.
(Read and Write computed property)

44.4.14 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The title of the identity picker.
Example:

```
dim c as new CBIdentityPickerMBS
c.Title = "Please choose your identity"
```

Notes: (Read and Write computed property)

44.4.15 Events

44.4.16 identityPickerDidEnd(returnCode as Integer)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: The event called when runModalForWindow finished.
Notes: ReturnCode is NSOKButton if the user selected OK; otherwise, NSCancelButton.

44.4.17 Constants

44.4.18 NSCancelButton = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the result codes you may need with this class.

44.4.19 NSOKButton = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the result codes you may need with this class.

44.5 class CBUserIdentityMBS

44.5.1 class CBUserIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: An object of the CBUserIdentity class represents a user identity and is used for accessing the attributes of a user identity from an identity authority.
Notes:

The principal attributes of CBUserIdentity are a POSIX user identifier (UID), password, and certificate.
Subclass of the CBIdentityMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

44.5.2 Blog Entries

- Collaboration Framework: CBIdentityPickerMBS class

44.5.3 Blog Entries

- Collaboration Framework: CBIdentityPickerMBS class

44.5.4 Methods

44.5.5 authenticateWithPassword(password as string) as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value indicating whether the given password is correct for the identity.
Notes: Returns true if the password is correct; otherwise, false.

44.5.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The private constructor.

44.5.7 copy as CBUserIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

44.5.8 isEnabled as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value indicating whether the identity is allowed to authenticate.
Notes:

If the identity does not have authentication credentials (a password or certificate), it is not able to log in. However, an identity with authentication credentials does not ensure that it is enabled. Any identity can be disabled.
Returns true if the identity can authenticate; otherwise, false.

44.5.9 posixUID as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the POSIX UID of the identity.
Notes: The POSIX UID is a integer that can identify a user within an identity authority. UIDs are not guaranteed to be unique within an identity authority.

44.5.10 userIdentityWithPosixUID(userID as Integer, authority as CBIdentityAuthorityMBS) as CBUserIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the user identity with the given POSIX UID in the specified identity authority.
Example:

```
// get first user
dim a as CBIdentityAuthorityMBS = CBIdentityAuthorityMBS.localIdentityAuthority
dim i as CBUserIdentityMBS = CBUserIdentityMBS.userIdentityWithPosixUID(501,a)

MsgBox i.fullName
```

Notes:

uid: The UID of the identity you are searching for.
authority: The identity authority to search.

Retruns the user identity with the given UID in the specified identity authority, or nil if no identity exists

with the specified UID.
Available in OS X v10.5 and later.

44.6 class CSIdentityAuthorityMBS

44.6.1 class CSIdentityAuthorityMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: A CSIdentityAuthority object represents an identity authority.
Example:

```
dim a as CSIdentityAuthorityMBS = CSIdentityAuthorityMBS.localIdentityAuthority
MsgBox a.localizedName
```

Notes:

An identity authority is a logical repository of user and group information, such the users and groups database on a local system or on a directory server.

The local authority contains all users and groups defined on the local system. The managed authority contains all users and groups defined in directory servers to which the system is bound (LDAP, ActiveDirectory, etc.). The Default authority is a union of the local and managed authorities and is used to locate user/group info from both sources in one query.

Use one of the class factory methods to return an CSIdentityAuthority object, which can be used to search for an identity with an CSIdentityQuery object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

44.6.2 Blog Entries

- MBS Real Studio Plugins, version 13.0pr6

44.6.3 Blog Entries

- MBS Real Studio Plugins, version 13.0pr6

44.6.4 Methods

44.6.5 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Whether the CSIdentityAuthority functions are available.
Example:

```
if not CSIdentityAuthorityMBS.Available then
MsgBox "not supported."
end if
```

44.6.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: The private constructor.

44.6.7 defaultIdentityAuthority as CSIdentityAuthorityMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns the system's default identity authority.
Example:

```
dim a as CSIdentityAuthorityMBS = CSIdentityAuthorityMBS.defaultIdentityAuthority
MsgBox a.localizedName
```

Notes: The default identity authority is a pseudo-authority representing the union of the local identity authority and the managed identity authority. The function CSIdentityMBS.Authority will never return the default authority instance.

44.6.8 localIdentityAuthority as CSIdentityAuthorityMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns the identity authority for identities defined on the local host.
Example:

```
dim a as CSIdentityAuthorityMBS = CSIdentityAuthorityMBS.localIdentityAuthority
MsgBox a.localizedName
```

44.6.9 localizedName as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns the localized name of an identity authority.
Example:

```
dim a as CSIdentityAuthorityMBS = CSIdentityAuthorityMBS.localIdentityAuthority
MsgBox a.localizedName
```

44.6.10 managedIdentityAuthority as CSIdentityAuthorityMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns the identity authority for identities defined in the system's managed directory server(s).
Example:

```
dim a as CSIdentityAuthorityMBS = CSIdentityAuthorityMBS.managedIdentityAuthority
MsgBox a.localizedName
```

Notes: There is always a valid managed identity authority instance, but if the system is not bound to any managed directory servers, the managed identity authority will contain no identities.

44.6.11 Properties

44.6.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

44.7 class CSIdentityMBS

44.7.1 class CSIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: A CSIdentity object represents a user or group entity known to the system.
Notes:

An identity object has the following required attributes: a class (user or group), a unique identitfier (UUID), a full name, a Posix ID (UID or GID), and a Posix name (a.k.a. "short" name). There are also a number of optional attributes such as email address, image data, etc.

Group identities have a membership which may include both users as well as other groups. An identity can be tested for membership in a specific group.

A CSIdentity object is a private copy of the identity information. It can be modified in memory, but requires authorization to commit changes back to the identity authority database. On OS X version 10.5, only local identities can be created, modified or deleted, and only by users with Administrator credentials.

Changes may be committed synchronously or asynchronously. All data validation occurs at commit time.
Two identities are equal if they have the same class and UUID.

44.7.3 Blog Entries

- MBS Real Studio Plugins, version 13.0pr6

44.7.4 Methods

44.7.5 AddAlias(alias as string)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Add a name alias to an identity.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
c.AddAlias "Hello"
MsgBox join(c.Aliases, EndOfLine)
```

Notes: This change must be committed.

44.7.6 AddMember(user as CSIdentityMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Add an identity to a group.
Notes:

User: The identity to add to the group. Can be a user or group identity.

Please call only on group identities.
This change to the group must be committed.

44.7.7 Aliases as string()

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Retrieve the aliases of an identity.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox join(c.Aliases, EndOfLine)
```

Notes:

Returns an array containing the identity's name aliases as strings. The array may be empty.

Aliases are alternate names for identities. As with all identity names, aliases must be unique within the entire namespace of of the identity authority.

44.7.8 AuthenticateUsingPassword(password as string) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Attempt to autenticate a password for a user identity.
Notes:

password: The password to authenticate

Returns true if the passord is correct for the specified user.
Please call only on user identity.

44.7.9 Authority as CSIdentityAuthorityMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns the identity authority of an identity.
Example:

```
dim u as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox u.Authority.localizedName
```

44.7.10 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Whether the CSIdentity functions are available.
Example:

```
if not CSIdentityMBS.Available then
MsgBox "not supported."
end if
```

44.7.11 Commit as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Synchronously commit all pending changes to the identity authority database.
Notes:

error: Optional variant for CFErrorMBS which will be set if this function returns false. When this occurs, the caller is responsible for releasing the error.
Returns true if successful, false if an error occurred.
See also:

- 44.7.12 Commit(byref error as Variant) as Boolean 9501

44.7.12 Commit(byref error as Variant) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Synchronously commit all pending changes to the identity authority database.
Notes:

error: Optional variant for CFErrorMBS which will be set if this function returns false. When this occurs, the caller is responsible for releasing the error.
Returns true if successful, false if an error occurred.
See also:

- 44.7.11 Commit as Boolean 9501

44.7.13 Constructor(identityClass as Integer, fullName as string, posixName as string, flags as Integer, authority as CSIdentityAuthorityMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates a new identity.
Example:

```
dim a as CSIdentityAuthorityMBS = CSIdentityAuthorityMBS.localIdentityAuthority
dim c as new CSIdentityMBS(CSIdentityMBS.kCSIdentityClassUser, "Test User", "TestUser", 0, a)

dim e as CFErrorMBS
dim v as Variant
if c.Commit(v) then
MsgBox "OK"
else
e = v
if e<>Nil then
MsgBox "Failed"+EndOfLine+e.Description
else
MsgBox "Failed"
end if
end if
```

Notes:

identityClass: The type of identity to be created. Specifying kCSIdentityClassUser creates a user, while kCSIdentityClassGroup creates a group.
fullName: The primary name of the new identity.
posixName: The POSIX name of the new identity. Specify kCSIdentityGeneratePosixName to have a name generated autmatically from the full name.
flags: Attributes of the new identity
authority: The identity authority to host the identity. Caller must have write access to the identity authority or commit will fail. Currently, only local identities may be created, so callers must specify the local identity authority for this argument.

On success the handle property is not zero.

The new identity is allocated but is not committed to the identity authority's database. It will become persistent and available to other clients after being committed using Commit or CommitAsynchronously.

44.7.14 copy as CSIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates a copy of an identity.
Example:

```
dim u as CSIdentityMBS = CSIdentityMBS.CurrentUser
dim v as CSIdentityMBS = u.copy
v.SetFullName "Hello World" // modify the copy only
MsgBox u.fullName+" "+v.fullName
```

44.7.15 CurrentUser as CSIdentityMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Queries current user identity.
Example:

```
dim u as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox u.fullName
```

44.7.16 Delete

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Permanently delete an identity from the identity database.
Notes: Sets an identity to deleted state. This change must be committed.

44.7.17 GroupMembershipQuery as CSIdentityQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates a query to find a group's members.
Notes:

Please call on the group identity whose members are to be queried
Returns the CSIdentityQueryMBS of the newly created object. The query is ready to be executed.
Using a query to lookup group membership allows the caller to execute the query synchronously or asynchronously.

44.7.18 IdentityClass as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns an identity's class.
Example:

```
dim u as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox str(u.IdentityClass) // shows 1 for user
```

44.7.19 ImageData as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Retrieve the image associated with a user identity.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
dim data as MemoryBlock = c.ImageData
dim pic as Picture = JPEGStringToPictureMBS(data)
Backdrop = pic
```

Notes: Returns the identity's image data as a memoryblock or nil if there is no image data.

44.7.20 ImageDataType as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Retrieve the uniform type identifier (UTI) of an identity's image.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox c.ImageDataType
```

Notes: Returns a UTI as a string for this identity's image data or "" if there is no image data. The identity

object may release its reference to the return value when the identity is modified.

44.7.21 IsCommitting as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Determine if a commit operation is in progress.
Notes: Returns true if a commit operation is in progress.

44.7.22 IsGroup as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Checks if identity class is group.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox str(c.IsUser)+" "+str(c.IsGroup)
```

44.7.23 IsHidden as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Determine if a identity's hidden attribute is enabled.
Example:

```
dim u as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox str(u.IsHidden)
```

Notes: Returns true if the identity was created with the hidden attribute

44.7.24 IsMemberOfGroup(group as CSIdentityMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Check if an identity is a memeber of a group.
Notes:

Please call only on a group identity.
group: The group identity whose membership is to be checked

Returns true if the identity is a member (directly or indirectly) of the specified group

44.7.25 IsUser as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Checks if identity class is user.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox str(c.IsUser)+" "+str(c.IsGroup)
```

44.7.26 kCSIdentityGeneratePosixName as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: A special string for posix names to use to auto generate the posix name.

44.7.27 PersistentReference as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Create an opaque, persistent data reference to an identity.
Example:

```
// get a reference
dim u as CSIdentityMBS = CSIdentityMBS.CurrentUser
dim p as MemoryBlock = u.PersistentReference
u = nil

// and search back later:
dim q as CSIdentityQueryMBS = CSIdentityQueryMBS.CreateForPersistentReference(p)
if q.Execute then
dim r() as CSIdentityMBS = q.Results
MsgBox r(0).fullName
end if
```

Notes:

Returns a new persistent reference for the identity.
A persistent identity reference is an opaque data object from which an identity object may queried the future (see CreateForPersistentReference). A persistent reference is suitable for storage in an external data

store, for example, as an entry in an application-specific access control list associated with a shared resource. Use of a persistent identity reference is preferred over a pure UUID-based identity reference because the persistent reference contains additional information needed to optimize the identity query and to improve the user experience when working in a distributed identity environment (LDAP, Active Directory, etc.).

44.7.28 PosixID as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Retrieve POSIX ID of an identity.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox str(c.PosixID)
```

Notes: Returns an identity's POSIX identifier (a UID or GID).

44.7.29 PosixName as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Retrieve the POSIX name (short name) of an identity.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox c.PosixName
```

Notes:

Returns an identity's POSIX name. This attribute is always non-empty.
The POSIX name cannot be changed after an identity has been created.

44.7.30 RemoveAlias(alias as string)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Remove an alias name from an identity.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
c.AddAlias "Hello"
```

```
MsgBox join(c.Aliases, EndOfLine)
c.RemoveAlias "Hello"
MsgBox join(c.Aliases, EndOfLine)
```

Notes:

alias: The alias name to remove
This change must be committed.

44.7.31 RemoveClient

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Invalidate an identity's client structure to stop client events.
Notes: After returning, this function guarantees that client event will never be invoked again. Use this function when releasing an identity which may have an outstanding asynchronous request. This function does not cancel an outstanding commit operation because a commit cannot be interrupted.

44.7.32 RemoveMember(user as CSIdentityMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Remove a member from a group.
Notes:

Please call only on group identities.
member: The member identity to remove
This change to the group must be committed.

44.7.33 SetEmailAddress(email as string = "")

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Set an identity's email address.
Example:

```
dim u as CSIdentityMBS = CSIdentityMBS.CurrentUser

u.SetEmailAddress("test@test.test")
MsgBox u.emailAddress
```

Notes:

emailAddress: The user's new email address value. Pass "" to remove an email address.
This change must be committed.

44.7.34 SetFullName(name as string)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Sets an identity's full name.
Example:

```
dim u as CSIdentityMBS = CSIdentityMBS.CurrentUser

// get old name
dim o as string = u.fullName

// change
u.SetFullName("Hello World")

// and report
MsgBox o+" ->"+u.fullName
```

Notes:

fullName: The new full name of the identity
This change must be committed.

44.7.35 SetImageData(data as memoryblock = nil, datatype as string = "public.jpeg")

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Set the internally-stored image data and data type for an identity.
Notes:

imageData: The image data. Pass nil to remove image data.
imageDataType: The uniform type identitier (UTI) of the image data. Currently, kUTTypeJPEG ("public.jpeg") is the only type supported.
This change must be committed.

44.7.36 SetImageURL(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Set the URL of an identity's external image storage.
Notes:

url: The URL file of the image. For local identities, this must be a file URL. Pass "" to remove the image URL from the identity.
This change must be committed.

44.7.37 SetIsEnabled(value as boolean)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Enable or disable a user.
Example:

```
dim u as CSIdentityMBS = CSIdentityMBS.CurrentUser

u.SetIsEnabled(true)
MsgBox str(u.isEnabled)
```

Notes:

isEnabled: The new value of the isEnabled attribute
A disabled user account cannot authenticate. Credentials (password and certificate) are not affected. This change must be committed.

44.7.38 SetPassword(password as string)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Set a user password.
Notes:

Please call only on user identites.
password: The new password, or "" to remove the current password and disable password-based authentication.
Setting the password to "" removes the current password and disables password authentication for the user. Setting the password to a zero-length string allows authentication with a blank password. This change must be committed.

44.7.39 UUID as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns an identity's UUID as string.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox c.UUID
```

44.7.40 Properties

44.7.41 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

44.7.42 EmailAddress as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Retrieve the email address of a user identity.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox c.emailAddress
```

Notes:

Returns the email address of the identity or "" if there is no email address.
(Read and Write computed property)

44.7.43 FullName as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Retrieve the full name of an identity.
Example:

```
dim i as CSIdentityMBS = CSIdentityMBS.CurrentUser
```

MsgBox i.fullName

Notes:

The full name is the name that is displayed in the user interface.
(Read and Write computed property)

44.7.44 ImageURL as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Retrieve the URL to an identity's image file.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox c.ImageURL
```

Notes:

Returns a URL that contains the location of the user's image file, or niol if there is no image URL.
(Read and Write computed property)

44.7.45 IsEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Determine if a user is enabled.
Example:

```
dim c as CSIdentityMBS = CSIdentityMBS.CurrentUser
MsgBox str(c.IsEnabled)
```

Notes:

Returns true if the user is enabled. A user that is not enabled cannot authenticate.
A user that is not enabled cannot authenticate. This setting may be used to temporarily allow a user's access to all services and resources.
(Read and Write computed property)

44.7.46 Constants

44.7.47 kCSIdentityClassGroup = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the class constants.
Notes: The class value for group identities.

44.7.48 kCSIdentityClassUser = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the class constants.
Notes: The class value for user identities.

44.7.49 kCSIdentityFlagHidden = -1

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the flags for identity creation.
Notes: This flag causes the identity to be "hidden," that is, excluded from most user-visible identity lists. Hidden identities include administrative users and groups such as root, www, and mysql. System service access control groups should be created with the hidden flag.

44.7.50 kCSIdentityFlagNone = 0

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: One of the flags for identity creation.
Notes: Use this flag to set no optional attributes for a new identity.

44.8 class CSIdentityQueryMBS

44.8.1 class CSIdentityQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: A CSIdentityQuery object provides synchronous or asynchronous access to a collection of identities managed by an identity authority.
Notes:

Clients call one of the CSIdentityQueryCreate* functions to define the query criteria. A query can be executed exactly once, in either synchronous or asynchronous mode.

For synchronous execution, the client calls CSIdentityQueryExecute. This function will return when all identies matching the criteria have been found. The results are accessed as an array via Results(). No live updates to the results array are provided in synchronous mode.

To execute in asynchronous mode, the client calls ExecuteAsynchronously, specifying a client object to receive callbacks and a runloop/mode on which callbacks are scheduled.

ExecuteAsynchronously returns immediately, and events will be reported to the callback function as results are added by the query. The client may request live updates to the query which will track changes to the results as changes are made to the identity authority by other processes. Currently, only changes to the local identity authority are monitored.

Asynchronous clients must call Stop when done processing query results to prevent the client callbacks from being called again.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

44.8.2 Blog Entries

- MBS Real Studio Plugins, version 13.0pr6

44.8.3 Blog Entries

- MBS Real Studio Plugins, version 13.0pr6

44.8.4 Methods

44.8.5 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Whether the CSIdentityQuery functions are available.
Example:

```
if not CSIdentityQueryMBS.Available then
MsgBox "not supported."
end if
```

44.8.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: The private constructor.

44.8.7 Create(identityClass as Integer, authority as CSIdentityAuthorityMBS) as CSIdentityQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates an identity query object for all identities in the specified authority.
Example:

```
dim c as CSIdentityQueryMBS = CSIdentityQueryMBS.Create(CSIdentityMBS.kCSIdentityClassUser, CSIdentityAuthorityMBS.localIdentityAuthority)

if c.Execute then
dim a() as CSIdentityMBS = c.Results

dim names() as string
for each p as CSIdentityMBS in a
names.append p.fullName
next

MsgBox join(names,EndOfLine)
end if
```

Notes:

identityClass: The class of identity to find
authority: The identity authority to query

Returns a new CSIdentityQuery object.

The results of this query include all of the identities in the specified authority's database.

44.8.8 CreateForCurrentUser as CSIdentityQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates a query for the current session user's identity.
Example:

```
dim q as CSIdentityQueryMBS = CSIdentityQueryMBS.CreateForCurrentUser

if q.Execute then
dim r() as CSIdentityMBS = q.Results

if UBound(r) = 0 then
dim i as CSIdentityMBS = r(0)

MsgBox i.fullName
end if
end if
```

44.8.9 CreateForName(name as string, comparisonMethod as Integer, identityClass as Integer, authority as CSIdentityAuthorityMBS) as CSIdentityQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates an identity query object based on a name.
Example:

```
// search for short name and show full name
dim name as string = SystemInformationMBS.ShortUsername
dim a as CSIdentityAuthorityMBS = CSIdentityAuthorityMBS.defaultIdentityAuthority
dim f as Integer = CSIdentityQueryMBS.kCSIdentityQueryStringEquals
dim q as CSIdentityQueryMBS = CSIdentityQueryMBS.CreateForName(name, f, CSIdentityMBS.kCSIdentityClassUser, a)

if q.Execute then
dim r() as CSIdentityMBS = q.Results
MsgBox r(0).fullName
end if
```

Notes:

name: The name criteria for the query.
comparisonMethod: The comparision function (equal or begins with)
identityClass: The class of identity to find
authority: The identity authority to query

Returns a new CSIdentityQuery object
The query finds identities by name. It searches the full names, posix names and aliases for matches.

44.8.10 CreateForPersistentReference(data as memoryblock) as CSIdentityQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates an identity query object based on an identity reference data object.
Example:

```
// get a reference
dim u as CSIdentityMBS = CSIdentityMBS.CurrentUser
dim p as MemoryBlock = u.PersistentReference
u = nil

// and search back later:
dim q as CSIdentityQueryMBS = CSIdentityQueryMBS.CreateForPersistentReference(p)
if q.Execute then
dim r() as CSIdentityMBS = q.Results
MsgBox r(0).fullName
end if
```

Notes:

referenceData: The reference data that fully describes an identity
Returns a new CSIdentityQuery object.
Finds an identity by reference data obtained from ReferenceData.

44.8.11 CreateForPosixID(posixID as Integer, identityClass as Integer, authority as CSIdentityAuthorityMBS) as CSIdentityQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates an identity query object based on a POSIX ID.
Example:

```
// search for short name and show full name
```

```
dim a as CSIdentityAuthorityMBS = CSIdentityAuthorityMBS.defaultIdentityAuthority
dim f as Integer = CSIdentityQueryMBS.kCSIdentityQueryStringEquals
dim q as CSIdentityQueryMBS = CSIdentityQueryMBS.CreateForPosixID(501, CSIdentityMBS.kCSIdentityClassUser, a)

if q.Execute then
dim r() as CSIdentityMBS = q.Results
MsgBox r(0).fullName
end if
```

Notes:

posixID: The UID or GID of the identity to find
identityClass: The class of identity to find
authority: The identity authority to query

Returns a new CSIdentityQuery object
Finds an identity by its UID or GID

44.8.12 CreateForUUID(uuid as string, authority as CSIdentityAuthorityMBS) as CSIdentityQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates an identity query object based on a UUID.
Notes:

uuid: The UUID of the identity to find
authority: The identity authority to query
Returns a new CSIdentityQuery object
Finds an identity by its UUID.

44.8.13 Execute(flags as Integer = 0) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Execute an identity query synchronously.
Notes:

flags: Execution options.
error: Optional pointer to a variant which is filled with CFErrorMBS object if function returns false.
Returns true if the query executed successfully, false if an error occurred.
See also:

• 44.8.14 Execute(flags as Integer, byref error as Variant) as Boolean 9519

44.8.14 Execute(flags as Integer, byref error as Variant) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Execute an identity query synchronously.
Notes:

flags: Execution options.
error: Optional pointer to a variant which is filled with CFErrorMBS object if function returns false.
Returns true if the query executed successfully, false if an error occurred.
See also:

• 44.8.13 Execute(flags as Integer = 0) as Boolean 9518

44.8.15 Results as CSIdentityMBS()

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Retrieve the results of executing an identity query.

44.8.16 Stop

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Invalidate an identity query client.
Notes: Invalidate a query client so that its callback will never be called in the future. Clients should call Stop when an query will no longer be used, prior to releasing the final query reference.

44.8.17 Properties

44.8.18 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

44.8.19 Constants

44.8.20 kCSIdentityQueryGenerateUpdateEvents = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Execution options for an identity query.
Notes: After the intial query phase is complete, monitor the result set for live updates.

44.8.21 kCSIdentityQueryIncludeHiddenIdentities = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Execution options for an identity query.
Notes: Include all matching identities in the result set, including hidden "system" users and groups (root, www, etc.).

44.8.22 kCSIdentityQueryStringBeginsWith = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Options for querying the database by name.
Notes:

The identity name must begin with the search string.
When searching for identities by name, this value specifies the string comparison function.

44.8.23 kCSIdentityQueryStringEquals = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0.

Function: Options for querying the database by name.
Notes:

The identity name must equal the search string.
When searching for identities by name, this value specifies the string comparison function.

Chapter 45

ColorSync

45.1 module CSDeviceMBS

45.1.1 module CSDeviceMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: A module for device related Colorsync methods.

45.1.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

45.1.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

45.1.4 Methods

45.1.5 DeviceInfo(deviceClass as string, deviceID as CFUUIDMBS) as dictionary

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries information on the device.
Notes:

Returns a dictionary with the following keys and values resolved for the current host and current user.

kColorSyncDeviceClass: camera, display, printer, scanner
kColorSyncDeviceID: CFUUIDRef registered with ColorSync
kColorSyncDeviceDescription: localized device description
kColorSyncDeviceUserScope: kCFPreferencesAnyUser or kCFPreferencesCurrentUser
kColorSyncDeviceHostScope: kCFPreferencesAnyHost or kCFPreferencesCurrentHost
kColorSyncFactoryProfiles: dictionary with ProfileID and kColorSyncCustomProfiles keys.
kColorSyncCustomProfiles: dictionary with keys ProfileID and values CFURLMBS or nil.

ProfileID is a dictionary with the following keys:

kColorSyncDeviceProfileURL: CFURLMBS or kCFNull
kColorSyncDeviceModeDescription: localized mode description

45.1.6 DeviceProfiles as dictionary()

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queris the device profiles.
Notes:

The dictionaries contain the following keys:

kColorSyncDeviceClass	camera, display, printer, scanner
kColorSyncDeviceID	CFUUIDRef registered with ColorSync
kColorSyncDeviceDescription	localized device description
kColorSyncDeviceModeDescription	localized device mode description
kColorSyncDeviceProfileID	ProfileID registered with ColorSync
kColorSyncDeviceProfileURL	CFURLMBS registered with ColorSync
kColorSyncDeviceProfileIsFactory	Boolean
kColorSyncDeviceProfileIsDefault	Boolean
kColorSyncDeviceProfileIsCurrent	Boolean

45.1.7 kColorSyncCameraDeviceClass as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: A constant for a possible value for the device class.

45.1.8 kColorSyncCustomProfiles as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.
Notes: Dictionary containing custom profile info.

45.1.9 kColorSyncDeviceClass as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.10 kColorSyncDeviceDefaultProfileID as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.11 kColorSyncDeviceDescription as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.
Notes: String with a name in current locale.

45.1.12 kColorSyncDeviceDescriptions as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.
Notes: Dictionary with localized names.

45.1.13 kColorSyncDeviceHostScope as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.14 kColorSyncDeviceID as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.
Notes: Value is a CFUUIDMBS for this key.

45.1.15 kColorSyncDeviceModeDescription as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.
Notes: String, e.g. Glossy, Best Quality.

45.1.16 kColorSyncDeviceModeDescriptions as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.
Notes: Dictionary with localized mode names.

45.1.17 kColorSyncDeviceProfileID as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.18 kColorSyncDeviceProfileIsCurrent as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.19 kColorSyncDeviceProfileIsDefault as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.20 kColorSyncDeviceProfileIsFactory as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.21 kColorSyncDeviceProfilesNotification as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.22 kColorSyncDeviceProfileURL as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.23 kColorSyncDeviceRegisteredNotification as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.24 kColorSyncDeviceUnregisteredNotification as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.25 kColorSyncDeviceUserScope as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.26 kColorSyncDisplayDeviceClass as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: A constant for a possible value for the device class.

45.1.27 kColorSyncDisplayDeviceProfilesNotification as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.28 kColorSyncFactoryProfiles as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.
Notes: Dictionary containing factory profile info.

45.1.29 kColorSyncPrinterDeviceClass as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: A constant for a possible value for the device class.

45.1.30 kColorSyncProfileHostScope as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.31 kColorSyncProfileUserScope as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants for the info/options dictionaries.

45.1.32 kColorSyncScannerDeviceClass as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: A constant for a possible value for the device class.

45.1.33 RegisterDevice(deviceClass as string, deviceID as CFUUIDMBS, deviceInfo as dictionary) as boolean

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Registeres a device.
Notes:

deviceInfo: A dictionary containing information needed to register a device.

Required keys:

kColorSyncDeviceDescriptions: Dictionary with localized names of the device. Localization keys must be five character strings containing language code and region code in the lc_RG format and it must contain (at least) the "en_US" locale.
kColorSyncFactoryProfiles: Dictionary with factory profile info Dictionaries The keys are the profile IDs and the values are the profile info dictionaries.

Optional keys:

kColorSyncDeviceHostScope: host scope of the device; one of kCFPreferences { Current,Any } Host; if unspecified kCFPreferencesCurrentHost is assumed.
kColorSyncDeviceUserScope: user scope of the device; one of kCFPreferences { Current,Any } User; if unspecified kCFPreferencesCurrentUser is assumed.

factory profiles dictionary - value for the key kColorSyncFactoryProfiles in deviceInfo

Required keys and values:

Each profile is identified by a ProfileID (of String type) which used as the key. Value associated with the key is a profile info dictionary that describes an individual device profile.

kColorSyncDeviceDefaultProfileID: the associated value must be one of the ProfileID present in the dictionary. Presence of this key is not required if there is only one factory profile.

profile info Dictionary

Required keys:

kColorSyncDeviceProfileURL: CFURLMBS of the profile to be registered
kColorSyncDeviceModeDescriptions: Dictionary with localized device mode names for the profile. Localization keys must be five character strings containing language code and region code in the lc_RG format and it must contain (at least) the "en_US" locale. E.g. "en_US" "Glossy Paper with best quality"

Example of deviceInfo dictionary:

kColorSyncDeviceDescriptions:
en_US My Little Printer
de_DE Mein Kleiner Drucker
fr_FR Mon petit immprimeur
...

kColorSyncFactoryProfiles: "Profile 1"
kColorSyncDeviceProfileURL: CFURLMBS
kColorSyncDeviceModeDescriptions:
en_US Glossy Paper
de_DE Glanzpapier
fr_FR Papier glace
...

kColorSyncDeviceDefaultProfileID: "Profile 1"
kColorSyncDeviceUserScope: kCFPreferencesAnyUser
kColorSyncDeviceHostScope: kCFPreferencesCurrentHost

Notes:
1. Scope for factory profiles is exactly the same as the device scope.
2. Pass CFNullRef in lieu of the profile URL or no URl key/value pair at all if factory profile is not available. This will enable setting custom profile.
3. For the reasons of compatibility with legacy API, it is recommended that the profile keys are created as CFStrings from uint32 numbers as follows: key = encodings.UTF32.chr(value)

Returns true on success and false in case of failure

45.1.34 SetCustomProfiles(deviceClass as string, deviceID as CFUUIDMBS, profileInfo as dictionary) as boolean

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a custom profile:
Notes:

profileInfo is a CFDictionary containing the information about custom profiles to be set in lieu of factory profiles.

Required keys:

ProfileIDs which must be the subset of the ProfileIDs that device was registered with or kColorSyncDeviceDefaultProfileID for setting custom default profile.

Required values:

CFURLMBS (folderitem) of the profile to be set as a custom profile.

Optional keys:

kColorSyncProfileHostScope: host scope of the profile; one of kCFPreferences { Current,Any } Host; if unspecified kCFPreferencesCurrentHost is assumed.
kColorSyncProfileUserScope: user scope of the profile; one of kCFPreferences { Current,Any } User; if unspecified kCFPreferencesCurrentUser is assumed.

Notes:
1. Profile scope for custom profiles cannot exceed scope of the factory profiles.
2. There is only one host scope and user scope per dictionary (i.e. per call)
3. Pass CFNullRef in lieu of the profile URL to unset the custom profile and reset the current profile to the factory profile.

Returns true on success and false in case of failure.

45.1.35 UnregisterDevice(deviceClass as string, deviceID as CFUUIDMBS) as boolean

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unregisters a device of given deviceClass and deviceID.
Notes: Returns true on success and false in case of failure.

45.2 class CSManagementModuleMBS

45.2.1 class CSManagementModuleMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a Color Management Module module.
Notes:

Color conversions are performed by a Color Management Module (CMM) which is a plugin to ColorSync. ColorSync contains Apple CMM, which is not replaceable, but third parties can install their own CMMs. ColorSync provides access to installed CMMs as well as those that can be part of the application bundle. CMM can be selected and specified as a preferred CMM per color transform created by the application. If the third party CMM fails to perform a task, Apple CMM will take it over.
Subclass of the CFObjectMBS class.

45.2.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

45.2.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

45.2.4 Methods

45.2.5 Bundle as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The bundle of the Color Management Module.
Notes: Nil for built-in Apple CMM.

45.2.6 CMMIdentifier as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal identifier for this Color Management Module.
Example:

```
dim a(-1) as CSManagementModuleMBS = CSManagementModuleMBS.InstalledCMMs

for each m as CSManagementModuleMBS in a
```

```
MsgBox m.CMMIdentifier
next
```

45.2.7 Constructor(Bundle as CFBundleMBS)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a Color Management Module object from a given CF Bundle.
Example:

```
dim f as FolderItem = GetFolderItem("/Library/ColorSync/CMMs/AdobeCMM.cmm", FolderItem.PathTypeShell)
dim b as CFBundleMBS = CreateBundleMBS(F)
dim m as new CSManagementModuleMBS(b)

' MsgBox stR(m.Handle) // must be non zero

MsgBox m.LocalizedName
MsgBox m.CMMIdentifier
```

45.2.8 InstalledCMMs as CSManagementModuleMBS()

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The list of installed Color Management Modules.
Example:

```
dim a(-1) as CSManagementModuleMBS = CSManagementModuleMBS.InstalledCMMs

for each m as CSManagementModuleMBS in a
dim path as string
dim bundle as CFBundleMBS = m.Bundle
if bundle<>nil then
dim ExecutableFileURL as CFURLMBS = bundle.URL
if ExecutableFileURL<>nil then
dim s as CFStringMBS = ExecutableFileURL.Str
if s<>nil then
path = s.str
end if
end if
end if

MsgBox m.CMMIdentifier+EndOfLine+EndOfLine+m.LocalizedName+EndOfLine+path
```

```
next
```

Notes: Returns an empty array on failure.

45.2.9 LocalizedName as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The localized name of this Color Management Module.
Example:

```
dim a(-1) as CSManagementModuleMBS = CSManagementModuleMBS.InstalledCMMs

for each m as CSManagementModuleMBS in a
MsgBox m.LocalizedName
next
```

45.3 class CSMutableProfileMBS

45.3.1 class CSMutableProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a mutable colorsync profile.
Notes: Subclass of the CSProfileMBS class.

45.3.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

45.3.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

45.3.4 Methods

45.3.5 Constructor

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new empty mutable profile.
See also:

- 45.3.6 Constructor(profile as CSProfileMBS) 9534

45.3.6 Constructor(profile as CSProfileMBS)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a mutable copy of the given profile.
See also:

- 45.3.5 Constructor 9534

45.3.7 RemoveTag(signature as string)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes the tag with the signature.

45.3.8 SetHeader(data as string)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the raw header data.

45.3.9 SetRawTag(signature as string, data as string)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a tag with the raw data in a string.

45.4 class CSProfileMBS

45.4.1 class CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a Colorsync profile.
Notes: Subclass of the CFObjectMBS class.

45.4.2 Blog Entries

- Features to be removed
- MBS REALbasic Plugins, version 10.5pr5

45.4.3 Blog Entries

- Features to be removed

45.4.4 Methods

45.4.5 Constructor(data as string, byref error as CFErrorMBS)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a profile with the data in the given string.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/ColorSync/Profiles/Generic Gray Profile.icc",
FolderItem.PathTypeShell)
dim stream as BinaryStream = file.OpenAsBinaryFile(False) // BinaryStream.Open(f, false)
dim data as string = stream.read(stream.length)
dim e as CFErrorMBS
dim p as new CSProfileMBS(data, e)

MsgBox p.Description
```

Notes: On success the handle property is not zero.
See also:

- 45.4.6 Constructor(DisplayID as Integer)

- 45.4.7 Constructor(file as folderitem) 9537
- 45.4.8 Constructor(file as folderitem, byref error as CFErrorMBS) 9538
- 45.4.9 Constructor(name as string) 9538
- 45.4.10 Constructor(profileSequence() as dictionary, options as dictionary) 9539

45.4.6 Constructor(DisplayID as Integer)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new profile with the given display.
Notes:

displayID: system-wide unique display ID (defined by IOKIt); pass 0 for main display.

On success the handle property is not zero.
See also:

- 45.4.5 Constructor(data as string, byref error as CFErrorMBS) 9536
- 45.4.7 Constructor(file as folderitem) 9537
- 45.4.8 Constructor(file as folderitem, byref error as CFErrorMBS) 9538
- 45.4.9 Constructor(name as string) 9538
- 45.4.10 Constructor(profileSequence() as dictionary, options as dictionary) 9539

45.4.7 Constructor(file as folderitem)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new profile based on the given file.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/ColorSync/Profiles/Generic XYZ Profile.icc",
FolderItem.PathTypeShell)
dim p as new CSProfileMBS(file)

MsgBox p.Description
```

Notes: On success the handle property is not zero.
See also:

- 45.4.5 Constructor(data as string, byref error as CFErrorMBS) 9536

- 45.4.6 Constructor(DisplayID as Integer) 9537
- 45.4.8 Constructor(file as folderitem, byref error as CFErrorMBS) 9538
- 45.4.9 Constructor(name as string) 9538
- 45.4.10 Constructor(profileSequence() as dictionary, options as dictionary) 9539

45.4.8 Constructor(file as folderitem, byref error as CFErrorMBS)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new profile based on the given file.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/ColorSync/Profiles/Generic XYZ Profile.icc",
FolderItem.PathTypeShell)
dim e as CFErrorMBS
dim p as new CSProfileMBS(file, e)

MsgBox p.Description
```

Notes: On success the handle property is not zero.
See also:

- 45.4.5 Constructor(data as string, byref error as CFErrorMBS) 9536
- 45.4.6 Constructor(DisplayID as Integer) 9537
- 45.4.7 Constructor(file as folderitem) 9537
- 45.4.9 Constructor(name as string) 9538
- 45.4.10 Constructor(profileSequence() as dictionary, options as dictionary) 9539

45.4.9 Constructor(name as string)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a profile with the given predefined name.
Example:

```
dim c as new CSProfileMBS(CSProfileMBS.kColorSyncGenericXYZProfile)
MsgBox c.Description
```

Notes: On success the handle property is not zero.
See also:

- 45.4.5 Constructor(data as string, byref error as CFErrorMBS) 9536
- 45.4.6 Constructor(DisplayID as Integer) 9537
- 45.4.7 Constructor(file as folderitem) 9537
- 45.4.8 Constructor(file as folderitem, byref error as CFErrorMBS) 9538
- 45.4.10 Constructor(profileSequence() as dictionary, options as dictionary) 9539

45.4.10 Constructor(profileSequence() as dictionary, options as dictionary)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a link profile.
Notes:

profileSequence: An array of dictionaries, each one containing a profile object and the information on the usage of the profile in the transform.

Required keys:

kColorSyncProfile: CSProfileMBS
kColorSyncRenderingIntent: String defining rendering intent
kColorSyncTransformTag: String defining which tags to use

Optional key:

kColorSyncBlackPointCompensation: Boolean to enable/disable BPC

options: dictionary with additional public global options (e.g. preferred CMM, quality, etc... It can also contain custom options that are CMM specific.

On success the handle property is not zero.
See also:

- 45.4.5 Constructor(data as string, byref error as CFErrorMBS) 9536
- 45.4.6 Constructor(DisplayID as Integer) 9537
- 45.4.7 Constructor(file as folderitem) 9537
- 45.4.8 Constructor(file as folderitem, byref error as CFErrorMBS) 9538
- 45.4.9 Constructor(name as string) 9538

45.4.11 ContainsTag(signature as string) as boolean

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the tag is contained in the profile.

45.4.12 CreateDeviceProfile(deviceClass as string, deviceID as CFUUIDMBS, profileID as Variant) as CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a device profile.
Notes:

deviceClass: ColorSync device class
deviceID: deviceID registered with ColorSync
profileID: profileID registered with ColorSync; pass kColorSyncDeviceDefaultProfileID to get the default profile.

See CSDeviceMBS for more info on deviceClass, deviceID and profileID

Returns nil on failure and Profile object on success.

45.4.13 CreateLink(profileSequence() as dictionary, options as dictionary) as CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a link profile.
Notes:

profileSequence: An array of dictionaries, each one containing a profile object and the information on the usage of the profile in the transform.

Required keys:

kColorSyncProfile: CSProfileMBS
kColorSyncRenderingIntent: String defining rendering intent
kColorSyncTransformTag: String defining which tags to use

Optional key:

kColorSyncBlackPointCompensation: Boolean to enable/disable BPC

options: dictionary with additional public global options (e.g. preferred CMM, quality, etc... It can also contain custom options that are CMM specific.

Returns nil on failure and Profile object on success.

45.4.14 CreateWithData(data as string) as CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a profile with the data in the given string.
Notes: Returns nil on failure and Profile object on success.
See also:

- 45.4.15 CreateWithData(data as string, byref error as CFErrorMBS) as CSProfileMBS 9541

45.4.15 CreateWithData(data as string, byref error as CFErrorMBS) as CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a profile with the data in the given string.
Notes: Returns nil on failure and Profile object on success.
See also:

- 45.4.14 CreateWithData(data as string) as CSProfileMBS 9541

45.4.16 CreateWithDisplayID(DisplayID as Integer) as CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new profile with the given display.
Notes:

displayID: system-wide unique display ID (defined by IOKIt); pass 0 for main display.

Returns nil on failure and Profile object on success.

45.4.17 CreateWithFile(file as folderitem) as CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new profile based on the given file.
Notes: Returns nil on failure and Profile object on success.
See also:

- 45.4.18 CreateWithFile(file as folderitem, byref error as CFErrorMBS) as CSProfileMBS 9542

45.4.18 CreateWithFile(file as folderitem, byref error as CFErrorMBS) as CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new profile based on the given file.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/ColorSync/Profiles/Generic XYZ Profile.icc",
FolderItem.PathTypeShell)
dim e as CFErrorMBS
dim p as new CSProfileMBS(file, e)

MsgBox p.Description
```

Notes: Returns nil on failure and Profile object on success.
See also:

- 45.4.17 CreateWithFile(file as folderitem) as CSProfileMBS 9541

45.4.19 CreateWithName(name as string) as CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a profile with the given name.
Example:

```
dim s as string = CSProfileMBS.kColorSyncGenericXYZProfile
dim c as CSProfileMBS = CSProfileMBS.CreateWithName(s)
MsgBox c.Description
```

Notes: Returns nil on failure and Profile object on success.

45.4.20 CreateWithURL(url as string) as CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new profile based on the file at the given URL.
Notes: Returns nil on failure and Profile object on success.
See also:

- 45.4.21 CreateWithURL(url as string, byref error as CFErrorMBS) as CSProfileMBS 9543

45.4.21 CreateWithURL(url as string, byref error as CFErrorMBS) as CSProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new profile based on the file at the given URL.
Notes: Returns nil on failure and Profile object on success.
See also:

- 45.4.20 CreateWithURL(url as string) as CSProfileMBS 9542

45.4.22 Data as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a string with the raw data of the profile.

45.4.23 Edit as CSMutableProfileMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an editable copy of the profile.
Notes: Returns nil on any error.

45.4.24 EstimateGamma as Double

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Calculates the estimated gamma for this profile.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/ColorSync/Profiles/Generic Gray Profile.icc",
FolderItem.PathTypeShell)
dim p as new CSProfileMBS(file)

MsgBox str(p.EstimateGamma) // 1.8
```

Notes: Returns non-zero value if success or 0.0 in case of error.
See also:

- 45.4.25 EstimateGamma(byref error as CFErrorMBS) as Double 9544

45.4.25 EstimateGamma(byref error as CFErrorMBS) as Double

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Calculates the estimated gamma for this profile.
Notes: Returns non-zero value if success or 0.0 in case of error.
See also:

- 45.4.24 EstimateGamma as Double 9543

45.4.26 EstimateGammaWithDisplayID(displayID as Integer) as Double

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Calculates the estimated gamma value for the given display.
Notes: displayID: system-wide unique display ID.
See also:

- 45.4.27 EstimateGammaWithDisplayID(displayID as Integer, byref error as CFErrorMBS) as Double 9544

45.4.27 EstimateGammaWithDisplayID(displayID as Integer, byref error as CFErrorMBS) as Double

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Calculates the estimated gamma value for the given display.
Notes: displayID: system-wide unique display ID.
See also:

- 45.4.26 EstimateGammaWithDisplayID(displayID as Integer) as Double 9544

45.4.28 File as folderitem

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The file reference for this profile.
See also:

• 45.4.29 File(byref error as CFErrorMBS) as folderitem 9545

45.4.29 File(byref error as CFErrorMBS) as folderitem

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The file reference for this profile.
See also:

• 45.4.28 File as folderitem 9544

45.4.30 Header as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a string with the raw header content.

45.4.31 InstalledProfiles as dictionary()

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the list of installed profiles.
Example:

```
dim a(-1) as Dictionary = CSProfileMBS.InstalledProfiles
dim lines(-1) as string

for each d as Dictionary in a
lines.Append d.Value(CSProfileMBS.kColorSyncProfileDescription)
next

MsgBox Join(lines,EndOfLine)
```

Notes: Returns an empty array on any error.

45.4.32 kColorSyncAdobeRGB1998Profile as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the predefined profile names.

45.4.33 kColorSyncGenericCMYKProfile as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the predefined profile names.

45.4.34 kColorSyncGenericGrayGamma22Profile as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the predefined profile names.

45.4.35 kColorSyncGenericGrayProfile as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the predefined profile names.

45.4.36 kColorSyncGenericLabProfile as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the predefined profile names.

45.4.37 kColorSyncGenericRGBProfile as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the predefined profile names.

45.4.38 kColorSyncGenericXYZProfile as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the predefined profile names.

45.4.39 kColorSyncProfileClass as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the tag signature constants.
Notes: Can be used with the dictionary returned by the InstalledProfiles method.

45.4.40 kColorSyncProfileColorSpace as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the tag signature constants.
Notes: Can be used with the dictionary returned by the InstalledProfiles method.

45.4.41 kColorSyncProfileDescription as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the tag signature constants.
Notes: Can be used with the dictionary returned by the InstalledProfiles method.

45.4.42 kColorSyncProfileHeader as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the tag signature constants.
Notes: Can be used with the dictionary returned by the InstalledProfiles method.

45.4.43 kColorSyncProfileMD5Digest as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the tag signature constants.
Notes: Can be used with the dictionary returned by the InstalledProfiles method.

45.4.44 kColorSyncProfilePCS as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the tag signature constants.
Notes: Can be used with the dictionary returned by the InstalledProfiles method.

45.4.45 kColorSyncProfileURL as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the tag signature constants.
Notes: Can be used with the dictionary returned by the InstalledProfiles method.

45.4.46 kColorSyncSRGBProfile as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the tag signature constants.
Notes: Can be used with the dictionary returned by the InstalledProfiles method.

45.4.47 MD5 as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: MD5 digest for the profile calculated as defined by ICC specification.
Notes:

Returns a 16 byte string with the raw bytes of the signature.
Returns an empty string on any error.

45.4.48 RawTag(signature as string) as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the raw tag value as string.

45.4.49 TagSignatures as string()

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of the tag signatures.

45.4.50 URL as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The URL reference for this profile.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/ColorSync/Profiles/Generic XYZ Profile.icc",
FolderItem.PathTypeShell)
dim p as new CSProfileMBS(file)

MsgBox p.URL
```

See also:

- 45.4.51 URL(byref error as CFErrorMBS) as string 9549

45.4.51 URL(byref error as CFErrorMBS) as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The URL reference for this profile.
See also:

- 45.4.50 URL as string 9549

45.4.52 Verify(byref errors as CFErrorMBS, byref warnings as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Verifies the profile.
Notes:

errors: returns error strings in case problems are found which would prevent use of the profile.
warnings: returns warning strings indicating problems due to lack of conformance with the ICC specification, but not preventing use of the profile.

Returns true if profile can be used or false otherwise.

45.4.53 Properties

45.4.54 Description as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the containing profile description localized to current locale.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/ColorSync/Profiles/Generic XYZ Profile.icc",
FolderItem.PathTypeShell)
dim p as new CSProfileMBS(file)

MsgBox p.Description
```

Notes: (Read only property)

45.4.55 MD5String as String

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: MD5 digest for the profile calculated as defined by ICC specification.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/ColorSync/Profiles/Generic XYZ Profile.icc",
FolderItem.PathTypeShell)
dim p as new CSProfileMBS(file)

MsgBox p.MD5String
```

Notes:

Returns a 32 byte human readable hexstring with the bytes of the signature.
Returns an empty string on any error.
(Read only property)

45.5 class CSTransformMBS

45.5.1 class CSTransformMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a ColorSync transformation.
Notes:

This class uses newer APIs than those in the older ColorSyncWorldMBS class.
Subclass of the CFObjectMBS class.

45.5.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr1
- MBS REALbasic Plugins, version 10.5pr5

45.5.3 Blog Entries

- MBS Xojo Plugins, version 19.3pr1
- MBS REALbasic Plugins, version 10.5pr5

45.5.4 Methods

45.5.5 Constructor(profileSequence() as dictionary, options as dictionary)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new transformation.
Notes:

profileSequence: Array of dictionaries, each one containing a profile object and the information on the usage of the profile in the transform.

Required keys:

kColorSyncProfile: CSProfileMBS
kColorSyncRenderingIntent: String defining rendering intent
kColorSyncTransformTag: String defining which tags to use

Optional key:
kColorSyncBlackPointCompensation: Boolean to enable/disable BPC

options: dictionary with additional public global options (e.g. preferred CMM, quality, etc... It can also contain custom options that are CMM specific.

On success the handle property is not zero.

45.5.6 Convert(dest as picture, src as memoryblock, srcDepth as Integer, srcLayout as Integer, srcBytesPerRow as Integer, options as dictionary) as boolean

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the convert methods to transform data.
Notes:

dest: Destination picture.
source: Source picture.
src: A memroyblock to the data to be converted.
srcDepth: Describes the bit depth and type of the source color components
srcFormat: Describes the format and byte packing of the source pixels
srcBytesPerRow: Number of bytes in the row of data

returns true if conversion was successful or false otherwise
See also:

- 45.5.7 Convert(dest as picture, src as picture, options as dictionary) as boolean 9552
- 45.5.8 Convert(dst as memoryblock, dstDepth as Integer, dstLayout as Integer, dstBytesPerRow as Integer, src as picture, options as dictionary) as boolean 9553
- 45.5.9 Convert(width as Integer, height as Integer, dst as memoryblock, dstDepth as Integer, dstLayout as Integer, dstBytesPerRow as Integer, src as memoryblock, srcDepth as Integer, srcLayout as Integer, srcBytesPerRow as Integer, options as dictionary) as boolean 9554

45.5.7 Convert(dest as picture, src as picture, options as dictionary) as boolean

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the convert methods to transform data.
Notes:

dest: Destination picture.
source: Source picture.

Should only be used with RGB for source/dest profile.

returns true if conversion was successful or false otherwise
See also:

- 45.5.6 Convert(dest as picture, src as memoryblock, srcDepth as Integer, srcLayout as Integer, srcBytesPerRow as Integer, options as dictionary) as boolean 9552
- 45.5.8 Convert(dst as memoryblock, dstDepth as Integer, dstLayout as Integer, dstBytesPerRow as Integer, src as picture, options as dictionary) as boolean 9553
- 45.5.9 Convert(width as Integer, height as Integer, dst as memoryblock, dstDepth as Integer, dstLayout as Integer, dstBytesPerRow as Integer, src as memoryblock, srcDepth as Integer, srcLayout as Integer, srcBytesPerRow as Integer, options as dictionary) as boolean 9554

45.5.8 Convert(dst as memoryblock, dstDepth as Integer, dstLayout as Integer, dstBytesPerRow as Integer, src as picture, options as dictionary) as boolean

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the convert methods to transform data.
Notes:

dest: Destination picture.
dst: A memroyblock to the destination where the results will be written.
dstDepth: Describes the bit depth and type of the destination color components
dstFormat: Describes the format and byte packing of the destination pixels
dstBytesPerRow: number of bytes in the row of data
source: Source picture.

returns true if conversion was successful or false otherwise
See also:

- 45.5.6 Convert(dest as picture, src as memoryblock, srcDepth as Integer, srcLayout as Integer, srcBytesPerRow as Integer, options as dictionary) as boolean 9552
- 45.5.7 Convert(dest as picture, src as picture, options as dictionary) as boolean 9552
- 45.5.9 Convert(width as Integer, height as Integer, dst as memoryblock, dstDepth as Integer, dstLayout as Integer, dstBytesPerRow as Integer, src as memoryblock, srcDepth as Integer, srcLayout as Integer, srcBytesPerRow as Integer, options as dictionary) as boolean 9554

45.5.9 Convert(width as Integer, height as Integer, dst as memoryblock, dstDepth as Integer, dstLayout as Integer, dstBytesPerRow as Integer, src as memoryblock, srcDepth as Integer, srcLayout as Integer, srcBytesPerRow as Integer, options as dictionary) as boolean

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the convert methods to transform data.
Notes:

width: Width of the image in pixels. (or taken from picture object)
height: Height of the image in pixels. (or taken from picture object)
dst: A memroyblock to the destination where the results will be written.
dstDepth: Describes the bit depth and type of the destination color components
dstFormat: Describes the format and byte packing of the destination pixels
dstBytesPerRow: number of bytes in the row of data
src: A memroyblock to the data to be converted.
srcDepth: Describes the bit depth and type of the source color components
srcFormat: Describes the format and byte packing of the source pixels
srcBytesPerRow: Number of bytes in the row of data

returns true if conversion was successful or false otherwise
See also:

- 45.5.6 Convert(dest as picture, src as memoryblock, srcDepth as Integer, srcLayout as Integer, srcBytesPerRow as Integer, options as dictionary) as boolean 9552
- 45.5.7 Convert(dest as picture, src as picture, options as dictionary) as boolean 9552
- 45.5.8 Convert(dst as memoryblock, dstDepth as Integer, dstLayout as Integer, dstBytesPerRow as Integer, src as picture, options as dictionary) as boolean 9553

45.5.10 GetProperty(key as Variant) as Variant

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries a property.
Notes: Returns nil if the value is nil or we had an error.

45.5.11 kColorSyncBestQuality as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncConvertQuality key.
Notes: do not coalesce profile transforms (default)

45.5.12 kColorSyncBlackPointCompensation as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used for profile info and options.

45.5.13 kColorSyncConversion1DLut as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.14 kColorSyncConversion3DLut as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.15 kColorSyncConversionBPC as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.16 kColorSyncConversionChannelID as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.17 kColorSyncConversionGridPoints as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.18 kColorSyncConversionInpChan as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.19 kColorSyncConversionMatrix as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.20 kColorSyncConversionOutChan as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.21 kColorSyncConversionParamCurve0 as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.22 kColorSyncConversionParamCurve1 as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.23 kColorSyncConversionParamCurve2 as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.24 kColorSyncConversionParamCurve3 as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.25 kColorSyncConversionParamCurve4 as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.26 kColorSyncConvertQuality as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the transform options keys.

45.5.27 kColorSyncDraftQuality as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncConvertQuality key.
Notes: coalesce all transforms, do not interpolate

45.5.28 kColorSyncNormalQuality as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncConvertQuality key.
Notes: coalesce all transforms

45.5.29 kColorSyncPreferredCMM as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the transform options keys.
Notes: Value is a CSManagementModuleMBS object.

45.5.30 kColorSyncProfile as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used for profile info and options.

45.5.31 kColorSyncRenderingIntent as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used for profile info and options.

45.5.32 kColorSyncRenderingIntentAbsolute as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncRenderingIntent key.

45.5.33 kColorSyncRenderingIntentPerceptual as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncRenderingIntent key.

45.5.34 kColorSyncRenderingIntentRelative as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncRenderingIntent key.

45.5.35 kColorSyncRenderingIntentSaturation as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncRenderingIntent key.

45.5.36 kColorSyncRenderingIntentUseProfileHeader as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncRenderingIntent key.

45.5.37 kColorSyncTransformCreator as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the dictionary used with the kColorSyncTranformInfo keys.
Notes: name of the CMM that created the transform

45.5.38 kColorSyncTransformDeviceToDevice as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncTransformTag key.

45.5.39 kColorSyncTransformDeviceToPCS as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncTransformTag key.

45.5.40 kColorSyncTransformDstSpace as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the dictionary used with the kColorSyncTranformInfo keys.

45.5.41 kColorSyncTransformFullConversionData as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.42 kColorSyncTransformGamutCheck as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncTransformTag key.

45.5.43 kColorSyncTransformParametricConversionData as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.44 kColorSyncTransformPCSToDevice as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncTransformTag key.

45.5.45 kColorSyncTransformPCSToPCS as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the kColorSyncTransformTag key.

45.5.46 kColorSyncTransformSimplifiedConversionData as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: For more information lookup details in Apples headers/documentation.

45.5.47 kColorSyncTransformSrcSpace as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the value constants for use with the dictionary used with the kColorSyncTranformInfo keys.

45.5.48 kColorSyncTransformTag as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used for profile info and options.

45.5.49 PrintClasses

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Writes the declarations of the plugin classes to the console.
Notes: Call in console applications.

45.5.50 SetProperty(key as Variant, value as Variant)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a property.

45.5.51 Constants

45.5.52 kColorSync16BitFloat = 4

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the possible data depth values constants.
Notes: 16 bit floats.

45.5.53 kColorSync16BitInteger = 3

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the possible data depth values constants.
Notes: 16 bit integers (short)

45.5.54 kColorSync1BitGamut = 1

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the possible data depth values constants.
Notes: 1 bit graphics.

45.5.55 kColorSync32BitFloat = 7

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the possible data depth values constants.
Notes: 32 bit float (single in Xojo)

45.5.56 kColorSync32BitInteger = 5

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the possible data depth values constants.
Notes: 32 bit integer

45.5.57 kColorSync32BitNamedColorIndex = 6

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the possible data depth values constants.
Notes: 32 bit integers with index of named color.

45.5.58 kColorSync8BitInteger = 2

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the possible data depth values constants.
Notes: 8 bit graphics (this is used in Xojo Picture objects)

45.5.59 kColorSyncAlphaFirst = 4

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the alpha constants.
Notes: For example, non-premultiplied ARGB

45.5.60 kColorSyncAlphaInfoMask = & h1F

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the alpha constants.
Notes: The bitmask for bitwise.BitAnd to extract the alpha value.

45.5.61 kColorSyncAlphaLast = 3

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the alpha constants.
Notes: For example, non-premultiplied RGBA

45.5.62 kColorSyncAlphaNone = 0

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the alpha constants.
Notes: For example, RGB.

45.5.63 kColorSyncAlphaNoneSkipFirst = 6

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the alpha constants.
Notes: For example, XRGB.

45.5.64 kColorSyncAlphaNoneSkipLast = 5

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the alpha constants.
Notes: For example, RBGX.

45.5.65 kColorSyncAlphaPremultipliedFirst = 2

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the alpha constants.
Notes: For example, premultiplied ARGB

45.5.66 kColorSyncAlphaPremultipliedLast = 1

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the alpha constants.
Notes: For example, premultiplied RGBA

45.5.67 kColorSyncByteOrder16Big = 12288

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the byte order constants.
Notes: 16 bit, big endian.

45.5.68 kColorSyncByteOrder16Little = 4096

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the byte order constants.
Notes: 16 bit, little endian.

45.5.69 kColorSyncByteOrder32Big = 16384

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the byte order constants.
Notes: 32 bit, big endian.

45.5.70 kColorSyncByteOrder32Little = 8192

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the byte order constants.
Notes: 32 bit, little endian.

45.5.71 kColorSyncByteOrderDefault = 0

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the byte order constants.

45.5.72 kColorSyncByteOrderMask = & h7000

MBS MacCF Plugin, Plugin Version: 10.5.

Function: One of the byte order constants.

Chapter 46

Common Types

46.1 Globals

46.1.1 MakeDoublePointMBS(x as Double, y as Double) as DoublePointMBS

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new double point.
Notes: Returns nil on low memory.

46.1.2 MakeDoubleRectMBS(left as Double, top as Double, width as Double, height as Double) as DoubleRectMBS

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new double rectangle.
Notes: Returns nil on low memory.

46.1.3 MakeIntegerPointMBS(x as Integer, y as Integer) as IntegerPointMBS

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new integer point.
Notes: Returns nil on low memory.

46.1.4 MakeIntegerRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as IntegerRectMBS

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new integer rectangle.
Notes: Returns nil on low memory.

46.2 class DoublePointMBS

46.2.1 class DoublePointMBS

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a double point.

46.2.2 Methods

46.2.3 Move(deltax as Double, deltay as Double)

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the point.

46.2.4 Properties

46.2.5 x as Double

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X property of the point.
Notes: (Read and Write property)

46.2.6 y as Double

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y property of the point.
Notes: (Read and Write property)

46.3 class DoubleRectMBS

46.3.1 class DoubleRectMBS

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a double rectangle.

46.3.2 Methods

46.3.3 Intersection(other as DoubleRectMBS) as DoubleRectMBS

MBS Util Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intersection area of two rectangles.
Notes: Returns nil if no intersection was found.

46.3.4 Intersects(other as DoubleRectMBS) as boolean

MBS Util Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether two rectangle intersect.
Notes: Returns true if yes and no on false.

46.3.5 Move(deltax as Double, deltay as Double)

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the rectangle.

46.3.6 Properties

46.3.7 Bottom as Double

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bottom property of the rectangle.
Notes: (Read and Write property)

46.3.8 height as Double

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height property of the rectangle.
Notes:

Setting this property changes the right property.
(Read and Write property)

46.3.9 left as Double

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The left property of the rectangle.
Notes: (Read and Write property)

46.3.10 right as Double

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The right property of the rectangle.
Notes: (Read and Write property)

46.3.11 Size as Double

MBS Util Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of this rectangle.
Notes: (Read only property)

46.3.12 top as Double

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The top property of the rectangle.
Notes: (Read and Write property)

46.3.13 width as Double

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width property of the rectangle.
Notes:

Setting this property changes the bottom property.
(Read and Write property)

46.4 class IntegerPointMBS

46.4.1 class IntegerPointMBS

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for an integer point.

46.4.2 Methods

46.4.3 Move(deltax as Integer, deltay as Integer)

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the point.

46.4.4 Properties

46.4.5 x as Integer

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X property of the point.
Notes: (Read and Write property)

46.4.6 y as Integer

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y property of the point.
Notes: (Read and Write property)

46.5 class IntegerRectMBS

46.5.1 class IntegerRectMBS

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for an integer rectangle.

46.5.2 Methods

46.5.3 Intersection(other as IntegerRectMBS) as IntegerRectMBS

MBS Util Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intersection area of two rectangles.
Notes: Returns nil if no intersection was found.

46.5.4 Intersects(other as IntegerRectMBS) as boolean

MBS Util Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether two rectangle intersect.
Notes: Returns true if yes and no on false.

46.5.5 Move(deltax as Integer, deltay as Integer)

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the rectangle.

46.5.6 Properties

46.5.7 bottom as Integer

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bottom property of the rectangle.
Notes: (Read and Write property)

46.5.8 height as Integer

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height property of the rectangle.
Notes:

Setting this property changes the right property.
(Read and Write property)

46.5.9 left as Integer

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The left property of the rectangle.
Notes: (Read and Write property)

46.5.10 right as Integer

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The right property of the rectangle.
Notes: (Read and Write property)

46.5.11 Size as Integer

MBS Util Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of this rectangle.
Notes: (Read only property)

46.5.12 top as Integer

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The top property of the rectangle.
Notes: (Read and Write property)

46.5.13 width as Integer

MBS Util Plugin, Plugin Version: 2.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width property of the rectangle.
Notes:

Setting this property changes the right property.
(Read and Write property)

Chapter 47

Compression

47.1 Globals

47.1.1 CompressBZip2MBS(buf as string,level as Integer) as string

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses the data and returns it as string.
Example:

```
dim s as string = "Hello World"
s=CompressBZip2MBS(s,9)
```

Notes: Compression level is going from 0 to 9, where 0 is no compression and 9 is best compression.

47.1.2 DecompressBZip2MBS(buf as string,size as Integer) as string

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses the data and returns it as string.
Example:

```
dim s as string = "Hello World"
s=CompressBZip2MBS(s,9)
s=DecompressBZip2MBS(s,10000)

MsgBox s
```

Notes: As DecompressZLibMBS can't know the size of the decompressed data you should give it a hint. Best is to save the size of the decompressed data on compression. Else you must guess the size which can be 10 times the size of the compressed data.

47.1.3 CompressZLibMBS(buf as string, level as Integer = 9) as string

MBS Compression Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses the data and returns it as string.
Example:

```
dim s as string = "Hello World"
dim l as Integer = lenb(s)

dim c as string = CompressZLibMBS(s,9)
dim d as string = DecompressZLibMBS(c, l)

MsgBox d
```

Notes:

Compression level is going from 0 to 9, where 0 is no compression and 9 is best compression.
Error: Optional parameter to receive the error code. (see error codes in ZLibCompressMBS)

For result and temp memory this function needs maximum something like 110% of lenb(buf).

Version 18.5 and newer use level 9 as default.
See also:

- 47.1.4 CompressZLibMBS(buf as string, level as Integer, byref error as Integer) as string 9578

47.1.4 CompressZLibMBS(buf as string, level as Integer, byref error as Integer) as string

MBS Compression Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses the data and returns it as string.
Notes:

Compression level is going from 0 to 9, where 0 is no compression and 9 is best compression.
Error: Optional parameter to receive the error code. (see error codes in ZLibCompressMBS)

For result and temp memory this function needs maximum something like 110% of lenb(buf).

47.1.5 Blog Entries

- MBS Real Studio Plugins, version 12.4pr10

See also:

- 47.1.3 CompressZLibMBS(buf as string, level as Integer = 9) as string 9578

47.1.6 DecompressZLibMBS(buf as string, size as Integer = 0) as string

MBS Compression Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses the data and returns it as string.
Example:

```
dim s as string = "Hello World"
s=CompressZLibMBS(s,9)
s=DecompressZLibMBS(s,10000)

MsgBox s
```

Notes:

As DecompressZLibMBS can't know the size of the decompressed data you should give it a hint. Best is to save the size of the decompressed data on compression. Else you must guess the size which can be 10 times the size of the compressed data.
Error: Optional parameter to receive the error code. (see error codes in ZLibCompressMBS)

Version 18.5 and newer ignore size and manage it automatically.
See also:

- 47.1.7 DecompressZLibMBS(buf as string, size as Integer, byref error as Integer) as string 9579

47.1.7 DecompressZLibMBS(buf as string, size as Integer, byref error as Integer) as string

MBS Compression Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses the data and returns it as string.
Notes:

As DecompressZLibMBS can't know the size of the decompressed data you should give it a hint. Best is to save the size of the decompressed data on compression. Else you must guess the size which can be 10 times

the size of the compressed data.
Error: Optional parameter to receive the error code. (see error codes in ZLibCompressMBS)

Returned data is a string without known encoding.

Version 18.5 and newer ignore size and manage it automatically.

47.1.8 Blog Entries

- MBS Xojo Plugins, version 18.5pr8
- MBS Xojo Plugins, version 18.5pr7
- MBS Real Studio Plugins, version 12.4pr10

See also:

- 47.1.6 DecompressZLibMBS(buf as string, size as Integer = 0) as string 9579

47.1.9 CompressLZWMBS(buf as string) as string

MBS Compression Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses string using LZW algorithm.
Example:

```
dim s as string
dim b as BinaryStream
dim f as FolderItem
dim l as Integer

f=SpecialFolder.Desktop.Child("output.tiff")
b=f.OpenAsBinaryFile(false)
s=b.Read(b.Length)
b.Close

l=lenb(s)
s=CompressLZWMBS(s)

f=SpecialFolder.Desktop.Child("output.compressed.tiff")
b=f.CreateBinaryFile("text")
b.Write s
b.Close

s=DecompressLZWMBS(s,l)
```

```
f=SpecialFolder.Desktop.Child("output.uncompressed.tiff")
b=f.CreateBinaryFile("text")
b.Write s
b.Close
```

Notes:

Please remember that the LZW algorithm can be implemented quite different. This one is byte based, uses 12bit offsets and a 4096 entry table.

Returns "" on low memory or Stack Overlow or Output buffer overlow.
(buffer and stack size may be increased on request for future plugin versions)

47.1.10 Blog Entries

- MBS Real Studio Plugins, version 11.3pr2

47.1.11 DecompressLZWMBS(buf as string, size as Integer) as string

MBS Compression Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses string using LZW algorithm.
Notes:

Please remember that the LZW algorithm can be implemented quite different. This one is byte based, uses 12bit offsets and a 4096 entry table.

Returns "" on low memory or Stack Overlow or Output buffer overlow.
(buffer and stack size may be increased on request for future plugin versions)

Size of the uncompressed length is only a guess for how big the output buffer needs to be. Actual string returned will often be smaller.

47.2 class BZip2CompressMBS

47.2.1 class BZip2CompressMBS

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for bzip2 compression.

47.2.2 Methods

47.2.3 Close

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

47.2.4 Constructor(BufferSize as Integer=20000)

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes:

The buffer size you specify is the output buffer size.
If this size is small, you need to flush with ProcessZip.

47.2.5 EndZip

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the current compression stream.
Notes:

You may check the Output property after this.
Error is set.

47.2.6 GetOutput as string

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the content of the output buffer.
Notes: The buffer is cleared after this function returns.

47.2.7 InitZip(level as Integer)

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the stream.
Notes:

Level is from 0 to 9.
Error is set.

47.2.8 InputAvail as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes available in the input buffer.

47.2.9 OutputSize as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of bytes available in the output buffer.

47.2.10 ProcessZip(Flush as boolean=false)

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does zip compression.
Notes:

Reduces the size of the input buffer and writes new data to the output buffer.
If the input buffer is not empty after this call, you need to call it again, but empty the output buffer before.
Error is set.

If flush is true, the data is flushed to output. Using flush=true all the the time will slow down compression, so use it only on the end to clear the output buffers.

47.2.11 SetInput(data as Memoryblock) as boolean

MBS Compression Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes:

Returns true if successfull.
The current plugin uses a 128 K input buffer.
See also:

- 47.2.12 SetInput(data as string) as boolean 9584

47.2.12 SetInput(data as string) as boolean

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes:

Returns true if successfull.
The current plugin uses a 128 K input buffer.
See also:

- 47.2.11 SetInput(data as Memoryblock) as boolean 9583

47.2.13 Properties

47.2.14 Error as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

47.2.15 OutputBufferSize as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output buffer size used in the constructor.
Notes: (Read only property)

47.2.16 TotalInput as UInt64

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes processed so far.
Notes: (Read and Write property)

47.2.17 TotalOutput as UInt64

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes processed so far.
Notes: (Read and Write property)

47.2.18 Version as String

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the used zlib library.
Notes: (Read only property)

47.2.19 Constants

47.2.20 kCONFIG_ERROR = -9

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes:

Indicates that the library has been improperly compiled on your platform – a major configuration error. Specifically, it means that sizeof(char), sizeof(short) and sizeof(int) are not 1, 2 and 4 respectively, as they should be. Note that the library should still work properly on 64-bit platforms which follow the LP64 programming model – that is, where sizeof(long) and sizeof(void*) are 8. Under LP64, sizeof(int) is still 4, so libbzip2, which doesn't use the long type, is OK.

This should never happen with the plugin.

47.2.21 kDATA_ERROR = -4

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned when a data integrity error is detected during decompression. Most importantly, this means when stored and computed CRCs for the data do not match. This value is also returned upon detection of any other anomaly in the compressed data.

47.2.22 kDATA_ERROR_MAGIC = -5

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: As a special case of kDATA_ERROR, it is sometimes useful to know when the compressed stream does not start with the correct magic bytes ('B' 'Z' 'h').

47.2.23 kFINISH = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the command constants for bzip.

47.2.24 kFINISH_OK = 3

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: In Compress, the requested flush/finish/nothing-special action was completed successfully.

47.2.25 kFLUSH = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the command constants for bzip.

47.2.26 kFLUSH_OK = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: In Compress, the requested flush/finish/nothing-special action was completed successfully.

47.2.27 kIO_ERROR = -6

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned by Read and Write when there is an error reading or writing in the compressed file, and by

ReadOpen and WriteOpen for attempts to use a file for which the error indicator (viz, ferror(f)) is set. On receipt of kIO_ERROR, the caller should consult errno and/or perror to acquire operating-system specific information about the problem.

47.2.28 kMEM_ERROR = -3

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned when a request to allocate memory failed. Note that the quantity of memory needed to decompress a stream cannot be determined until the stream's header has been read. So Decompress and Read may return kMEM_ERROR even though some of the compressed data has been read. The same is not true for compression; once CompressInit or WriteOpen have successfully completed, kMEM_ERROR cannot occur.

47.2.29 kOK = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: The requested action was completed successfully.

47.2.30 kOUTBUFF_FULL = -8

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned by BuffToBuffCompress and BuffToBuffDecompress to indicate that the output data will not fit into the output buffer provided.

47.2.31 kPARAM_ERROR = -2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned when a parameter to a function call is out of range or otherwise manifestly incorrect. As with kSEQUENCE_ERROR, this denotes a bug in the client code. The distinction between kPARAM_ERROR and kSEQUENCE_ERROR is a bit hazy, but still worth making.

47.2.32 kRUN = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the command constants for bzip.

47.2.33 kRUN_OK = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: In Compress, the requested flush/finish/nothing-special action was completed successfully.

47.2.34 kSEQUENCE_ERROR = -1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: When using the library, it is important to call the functions in the correct sequence and with data structures (buffers etc) in the correct states. libbzip2 checks as much as it can to ensure this is happening, and returns kSEQUENCE_ERROR if not. Code which complies precisely with the function semantics, as detailed below, should never receive this value; such an event denotes buggy code which you should investigate.

47.2.35 kSTREAM_END = 4

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Compression of data was completed, or the logical stream end was detected during decompression.

47.2.36 kUNEXPECTED_EOF = -7

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned by Read when the compressed file finishes before the logical end of stream is detected.

47.3 class BZip2DecompressMBS

47.3.1 class BZip2DecompressMBS

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for bzip2 decompression.

47.3.2 Methods

47.3.3 Close

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

47.3.4 Constructor(BufferSize as Integer=20000)

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes:

The buffer size you specify is the output buffer size.
If this size is small, you need to flush with ProcessZip.

47.3.5 EndZip

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the current decompression stream.
Notes:

You may check the Output property after this.
Error is set.

47.3.6 GetOutput as string

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the content of the output buffer.
Notes: The buffer is cleared after this function returns.

47.3.7 InitZip

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the stream.
Notes: Error is set.

47.3.8 InputAvail as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes available in the input buffer.

47.3.9 OutputSize as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of bytes available in the output buffer.

47.3.10 ProcessZip

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does zip compression.
Notes:

Reduces the size of the input buffer and writes new data to the output buffer.
If the input buffer is not "" after this call, you need to call it again, but empty the output buffer before.
Error is set.

47.3.11 SetInput(data as Memoryblock) as boolean

MBS Compression Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes:

Returns true if successfull.
The current plugin uses a 128 K input buffer.
See also:

- 47.3.12 SetInput(data as string) as boolean 9591

47.3.12 SetInput(data as string) as boolean

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes:

Returns true if successfull.
The current plugin uses a 128 K input buffer.
See also:

- 47.3.11 SetInput(data as Memoryblock) as boolean 9590

47.3.13 Properties

47.3.14 Error as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

47.3.15 OutputBufferSize as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output buffer size used in the constructor.
Notes: (Read only property)

47.3.16 TotalInput as UInt64

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes processed so far.
Notes: (Read and Write property)

47.3.17 TotalOutput as UInt64

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes processed so far.
Notes: (Read and Write property)

47.3.18 Version as String

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the used zlib library.
Notes: (Read only property)

47.3.19 Constants

47.3.20 kCONFIG_ERROR = -9

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes:

Indicates that the library has been improperly compiled on your platform – a major configuration error. Specifically, it means that sizeof(char), sizeof(short) and sizeof(int) are not 1, 2 and 4 respectively, as they should be. Note that the library should still work properly on 64-bit platforms which follow the LP64 programming model – that is, where sizeof(long) and sizeof(void*) are 8. Under LP64, sizeof(int) is still 4, so libbzip2, which doesn't use the long type, is OK.

This should never happen with the plugin.

47.3.21 kDATA_ERROR = -4

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned when a data integrity error is detected during decompression. Most importantly, this means when stored and computed CRCs for the data do not match. This value is also returned upon detection of any other anomaly in the compressed data.

47.3.22 kDATA_ERROR_MAGIC = -5

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: As a special case of kDATA_ERROR, it is sometimes useful to know when the compressed stream does not start with the correct magic bytes ('B' 'Z' 'h').

47.3.23 kFINISH = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the command constants for bzip.

47.3.24 kFINISH_OK = 3

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: In Compress, the requested flush/finish/nothing-special action was completed successfully.

47.3.25 kFLUSH = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the command constants for bzip.

47.3.26 kFLUSH_OK = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: In Compress, the requested flush/finish/nothing-special action was completed successfully.

47.3.27 kIO_ERROR = -6

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned by Read and Write when there is an error reading or writing in the compressed file, and by

ReadOpen and WriteOpen for attempts to use a file for which the error indicator (viz, ferror(f)) is set. On receipt of kIO_ERROR, the caller should consult errno and/or perror to acquire operating-system specific information about the problem.

47.3.28 kMEM_ERROR = -3

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned when a request to allocate memory failed. Note that the quantity of memory needed to decompress a stream cannot be determined until the stream's header has been read. So Decompress and Read may return kMEM_ERROR even though some of the compressed data has been read. The same is not true for compression; once CompressInit or WriteOpen have successfully completed, kMEM_ERROR cannot occur.

47.3.29 kOK = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: The requested action was completed successfully.

47.3.30 kOUTBUFF_FULL = -8

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned by BuffToBuffCompress and BuffToBuffDecompress to indicate that the output data will not fit into the output buffer provided.

47.3.31 kPARAM_ERROR = -2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned when a parameter to a function call is out of range or otherwise manifestly incorrect. As with kSEQUENCE_ERROR, this denotes a bug in the client code. The distinction between kPARAM_ERROR and kSEQUENCE_ERROR is a bit hazy, but still worth making.

47.3.32 kRUN = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the command constants for bzip.

47.3.33 kRUN_OK = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: In Compress, the requested flush/finish/nothing-special action was completed successfully.

47.3.34 kSEQUENCE_ERROR = -1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: When using the library, it is important to call the functions in the correct sequence and with data structures (buffers etc) in the correct states. libbzip2 checks as much as it can to ensure this is happening, and returns kSEQUENCE_ERROR if not. Code which complies precisely with the function semantics, as detailed below, should never receive this value; such an event denotes buggy code which you should investigate.

47.3.35 kSTREAM_END = 4

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Compression of data was completed, or the logical stream end was detected during decompression.

47.3.36 kUNEXPECTED_EOF = -7

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the error constants.
Notes: Returned by Read when the compressed file finishes before the logical end of stream is detected.

47.4 class BZip2FileMBS

47.4.1 class BZip2FileMBS

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to read and write bzip2 byte streams.
Notes: A .bz2 file is just the content of the original file compressed. No header.

47.4.2 Methods

47.4.3 Close

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes:

There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

Lasterror and LasterrorMessage are set.

47.4.4 Flush

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flushes all pending output into the compressed file.
Notes: Lasterror and LasterrorMessage are set.

47.4.5 Open(file as folderitem, mode as string) as boolean

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a .bz2 file for reading or writing, using the given file path.
Notes:

Returns false on failure.
Mode can be "r" for reading and "w" for writing. Or other values fopen accepts.

Lasterror and LasterrorMessage are set.

47.4.6 OpenString(data as string) as boolean

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a bzip compressed file from the given string.
Notes:

Returns true on success and false on failure.

Lasterror and LasterrorMessage are set.

47.4.7 Read(ByteCount as Int64) as string

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads data form a compresses file.
Notes: Lasterror and LasterrorMessage are set.

47.4.8 ReadByte as integer

MBS Compression Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a single byte.
Notes: Lasterror and LasterrorMessage are set.

47.4.9 ReadData(ByteCount as Int64) as Memoryblock

MBS Compression Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads data into memoryblock.
Notes: Lasterror and LasterrorMessage are set.

47.4.10 Write(data as Memoryblock)

MBS Compression Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes data to the file and compresses it.
Notes: Lasterror and LasterrorMessage are set.
See also:

- 47.4.11 Write(data as string) 9598

47.4.11 Write(data as string)

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes data to the file and compresses it.
Notes: Lasterror and LasterrorMessage are set.
See also:

- 47.4.10 Write(data as Memoryblock) 9597

47.4.12 WriteByte(data as integer)

MBS Compression Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a single byte.
Notes: Lasterror and LasterrorMessage are set.

47.4.13 Properties

47.4.14 ErrorCode as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Deprecated: This item is deprecated and should no longer be used. You can use Lasterror instead. **Notes:** (Read and Write property)

47.4.15 ErrorMessage as String

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Deprecated: This item is deprecated and should no longer be used. You can use LasterrorMessage instead.
Notes: (Read and Write property)

47.4.16 Handle as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current bzip file handle.
Notes: (Read and Write property)

47.4.17 Lasterror as Integer

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error value.
Notes: (Read and Write property)

47.4.18 LasterrorMessage as String

MBS Compression Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Notes: (Read and Write property)

47.4.19 Version as String

MBS Compression Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string indicating the library version.
Notes: (Read only property)

47.5 class GZipFileMBS

47.5.1 class GZipFileMBS

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to read and write gzip byte streams.
Notes:

A .gz file is just the content of the original file compressed. No header.

See also ArchiveReaderMBS and ArchiveWriterMBS classes for more features and compression formats.

47.5.6 Methods

47.5.7 Adler32(start as UInt32, data as string) as UInt32

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Adler Checksum about a given string.
Notes:

Set start to 0 for the first call.
Later you can pass the result as the new start value to add data to your checksum.

This function is part of the zlib library and given as a free utility function to this class.

47.5.8 Close

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

47.5.9 CloseForString as string

MBS Compression Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the file and returns the string.
Example:

```
Function GZIPStringWriteMBS(data as string) As string
dim g as new GZipFileMBS

if g.CreateForString then
g.Write data

Return g.CloseForString
end if
End Function
```

Notes:

Only for use with CreateForString function.
Returns empty string on any error.

47.5.10 CRC32(start as UInt32, data as string) as UInt32

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about a given string.
Notes:

Set start to 0 for the first call.
Later you can pass the result as the new start value to add data to your checksum.

This function is part of the zlib library and given as a free utility function to this class.

47.5.11 CreateForString as boolean

MBS Compression Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new gzip file in memory.
Example:

```
Function GZIPStringWriteMBS(data as string) As string
dim g as new GZipFileMBS

if g.CreateForString then
g.Write data

Return g.CloseForString
end if
End Function
```

Notes:

Use with the CloseForString method to compress data in memory.
Returns false on any error and true on success.

47.5.12 Flush(flush as Integer)

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flushes all pending output into the compressed file.
Notes:

The parameter flush is as in the zlib deflate() function.
Lasterror is set.
Flush should be called only when strictly necessary because it can degrade compression.

47.5.13 Open(file as folderitem, mode as string) as boolean

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a gzip (.gz) file for reading or writing.
Notes:

The mode parameter is as in fopen (”rb” read binary or ”wb” for write binary) but can also include a compression level (”wb9”) or a strategy: ’f’ for filtered data as in ”wb6f”, ’h’ for Huffman only compression as in ”wb1h”.

Open can be used to read a file which is not in gzip format; in this case Read will directly read from the file without decompression.

Open returns NULL if the file could not be opened or if there was insufficient memory to allocate the (de)compression state; errno can be checked to distinguish the two cases (if errno is zero, the zlib error is Z_MEM_ERROR).

Returns false on any error and true on success.

47.5.14 OpenString(data as string) as boolean

MBS Compression Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a gzip (.gz) file for reading from a file.
Example:

```
Function GZipStringReadMBS(compressedData as string) As string
dim g as new GZipFileMBS

const BlockSize=1000000

if g.OpenString(compressedData) then

dim parts(-1) as string

while not g.eof
dim s as string=g.Read(BlockSize)
parts.Append s
wend

Return Join(parts,"")
end if
End Function
```

Notes: Same as Open, but reading from the given string.

47.5.15 Read(ByteCount as Int64) as string

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the given number of bytes into a string.
Notes:

Returns "" on any error.
May return less bytes than requested.
Lasterror is set.

47.5.16 ReadByte as Integer

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads one byte from the file.

47.5.17 ReadData(ByteCount as Int64) as Memoryblock

MBS Compression Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the given number of bytes into a memoryblock.
Notes:

Returns nil on any error.
May return less bytes than requested.
Lasterror is set.

47.5.18 Rewind

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the file position for reading files to the file start.
Notes: Equal to: position=0

47.5.19 SetParameter(level as Integer, strategy as Integer)

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dynamically update the compression level or strategy.
Notes:

Lasterror is set.

Possible values:

FILTERED	1
HUFFMAN_ONLY	2
DEFAULT_STRATEGY	0

47.5.20 Write(data as Memoryblock)

MBS Compression Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a Memoryblock to a file.
Notes: Lasterror is set.
See also:

- 47.5.21 Write(data as string) 9606

47.5.21 Write(data as string)

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a string to a file.
Notes:

Note that encoding can make trouble as the raw bytes from the string are written.
Lasterror is set.
See also:

- 47.5.20 Write(data as Memoryblock) 9605

47.5.22 WriteByte(data as Integer)

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes one byte to the file.

47.5.23 Properties

47.5.24 Direct as Boolean

MBS Compression Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if file is being copied directly while reading, or false if file is a gzip stream being decompressed.
Notes:

If the input file is empty, Direct will return true, since the input does not contain a gzip stream.
(Read only property)

47.5.25 EOF as Boolean

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if reading is on the end of the file.
Notes:

Returns true on any error.
(Read only property)

47.5.26 ErrorCode as Integer

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last zlib error number.
Notes:

If an error occurred in the file system and not in the compression library, errnum is set to Z_ERRNO and the application may consult errno to get the exact error code. (errno is currently not available in Xojo)

Error codes:

Z_OK	0
Z_STREAM_END	1
Z_NEED_DICT	2
Z_ERRNO	-1
Z_STREAM_ERROR	-2
Z_DATA_ERROR	-3
Z_MEM_ERROR	-4
Z_BUF_ERROR	-5
Z_VERSION_ERROR	-6

(Read only property)

47.5.27 ErrorMessage as String

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the error message for the last error which occurred on the given compressed file.
Notes: (Read only property)

47.5.28 Handle as Integer

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current zlib file handle.
Notes: (Read and Write property)

47.5.29 Lasterror as Integer

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes:

0 for success.
-1 for failure.
(Read and Write property)

47.5.30 Position as Integer

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current file position.
Notes:

Not all positions are available.
e.g. on writing you can not move back.
Moving forward will add bytes with value 0 to the file.
Lasterror is set.
(Read and Write property)

47.5.31 Version as String

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the used zlib library.
Notes: (Read only property)

47.6 module LZ4MBS

47.6.1 module LZ4MBS

MBS Compression Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for LZ4 compression.
Example:

```
Dim m As String = "Lorem ipsum dolor sit amet, consectetur adipiscing elit. Lorem ipsum dolor site amat."

// make sure encoding is set
m = ConvertEncoding(m, encodings.UTF8)

// compress
Dim c As String = LZ4MBS.Compress(m)

// decompress
Dim d As String = LZ4MBS.Decompress(c)

// set encoding after decompressing
d = DefineEncoding(d, encodings.UTF8)

// and check
If d = m Then
MsgBox "Text match"
Else
MsgBox "Text doesn't match"
End If
```

47.6.6 Methods

47.6.7 Compress(InputData as MemoryBlock) as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses a MemoryBlock.
Example:

```
// some 10 million zeros will compress well
Dim m As New MemoryBlock(100000000)

// compress
Dim c As MemoryBlock = LZ4MBS.Compress(m)

// decompress
Dim d As MemoryBlock = LZ4MBS.Decompress(c)

// and check
If d.Size = m.size Then
MsgBox "Sizes match"
Else
MsgBox "Sizes don't match"
End If
```

Notes: Raises exception on failure (OutOfMemoryException or UnsupportedOperationException) and returns string on success.
See also:

- 47.6.8 Compress(InputData as Ptr, Size as Integer) as MemoryBlock 9611
- 47.6.9 Compress(InputData as string) as string 9611

47.6.8 Compress(InputData as Ptr, Size as Integer) as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses data in ptr.
Notes:

Same as memoryblock version, but with ptr parameter, so you can pass ptr with size.
Works also for passing memoryblocks and a custom size.
See also:

- 47.6.7 Compress(InputData as MemoryBlock) as MemoryBlock 9610
- 47.6.9 Compress(InputData as string) as string 9611

47.6.9 Compress(InputData as string) as string

MBS Compression Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses a string.
Example:

```
Dim m As String = "Lorem ipsum dolor sit amet, consectetur adipiscing elit. Lorem ipsum dolor site amat."

// make sure encoding is set
m = ConvertEncoding(m, encodings.UTF8)

// compress
Dim c As String = LZ4MBS.Compress(m)

// decompress
Dim d As String = LZ4MBS.Decompress(c)

// set encoding after decompressing
d = DefineEncoding(d, encodings.UTF8)

// and check
If d = m Then
MsgBox "Text match"
Else
MsgBox "Text doesn't match"
End If
```

Notes: Raises exception on failure (OutOfMemoryException or UnsupportedOperationException) and returns string on success.
See also:

- 47.6.7 Compress(InputData as MemoryBlock) as MemoryBlock 9610
- 47.6.8 Compress(InputData as Ptr, Size as Integer) as MemoryBlock 9611

47.6.10 CompressFast(InputData as MemoryBlock, Acceleration as Integer = 1) as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses a memoryblock.
Notes:

Raises exception on failure (OutOfMemoryException or UnsupportedOperationException) and returns string on success.

Same as Compress(), but allows selection of "acceleration" factor.
The larger the acceleration value, the faster the algorithm, but also the lesser the compression.
It's a trade-off. It can be fine tuned, with each successive value providing roughly +
textasciitilde 3% to speed.
An acceleration value of "1" is the same as regular Compress()
Values <= 0 will be replaced by AccelerationDefault (currently = 1).
See also:

- 47.6.11 CompressFast(InputData as Ptr, Size as Integer, Acceleration as Integer = 1) as MemoryBlock 9612
- 47.6.12 CompressFast(InputData as string, Acceleration as Integer = 1) as string 9613

47.6.11 CompressFast(InputData as Ptr, Size as Integer, Acceleration as Integer = 1) as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses data in ptr.
Notes:

Same as memoryblock version, but with ptr parameter, so you can pass ptr with size.
Works also for passing memoryblocks and a custom size.
See also:

- 47.6.10 CompressFast(InputData as MemoryBlock, Acceleration as Integer = 1) as MemoryBlock 9612
- 47.6.12 CompressFast(InputData as string, Acceleration as Integer = 1) as string 9613

47.6.12 CompressFast(InputData as string, Acceleration as Integer = 1) as string

MBS Compression Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses a string.
Notes:

Raises exception on failure (OutOfMemoryException or UnsupportedOperationException) and returns string on success.

Same as Compress(), but allows selection of "acceleration" factor.
The larger the acceleration value, the faster the algorithm, but also the lesser the compression.
It's a trade-off. It can be fine tuned, with each successive value providing roughly +
textasciitilde 3% to speed.
An acceleration value of "1" is the same as regular Compress()
Values <= 0 will be replaced by AccelerationDefault (currently = 1).
See also:

- 47.6.10 CompressFast(InputData as MemoryBlock, Acceleration as Integer = 1) as MemoryBlock 9612
- 47.6.11 CompressFast(InputData as Ptr, Size as Integer, Acceleration as Integer = 1) as MemoryBlock 9612

47.6.13 CompressHC(InputData as MemoryBlock, compressionLevel as Integer = 9) as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses a memoryblock with high compression.
Example:

```
// lets make some data to compress
Dim p As Picture = LogoMBS(500)
Dim m As MemoryBlock = p.GetData(Picture.FormatBMP)

// compress
Dim c1 As MemoryBlock = LZ4MBS.Compress(m)
Dim c2 As MemoryBlock = LZ4MBS.CompressHC(m, LZ4MBS.CompressionLevelMin)
Dim c3 As MemoryBlock = LZ4MBS.CompressHC(m, LZ4MBS.CompressionLevelDefault)
Dim c4 As MemoryBlock = LZ4MBS.CompressHC(m, LZ4MBS.CompressionLevelOptMin)
Dim c5 As MemoryBlock = LZ4MBS.CompressHC(m, LZ4MBS.CompressionLevelMax)

MsgBox _
Str(c1.Size)+" normal"+EndOfLine+_
Str(c2.size)+" min"+EndOfLine+_
Str(c3.size)+" default"+EndOfLine+_
```

```
Str(c4.size)+" opt min"+EndOfLine+_
Str(c5.size)+" max"
```

Notes:

Raises exception on failure (OutOfMemoryException or UnsupportedOperationException) and returns string on success.

Compression level, with # being any value from 1 to 12. Higher values trade compression speed for compression ratio. Values above 12 are considered the same as 12. Recommended values are 1 for fast compression (default), and 9 for high compression. Speed/compression trade-off will vary depending on data to compress\. Decompression speed remains fast at all settings.
See also:

- 47.6.14 CompressHC(InputData as Ptr, Size as Integer, compressionLevel as Integer = 9) as MemoryBlock 9614
- 47.6.15 CompressHC(InputData as string, compressionLevel as Integer = 9) as string 9614

47.6.14 CompressHC(InputData as Ptr, Size as Integer, compressionLevel as Integer = 9) as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses data in ptr.
Notes:

Same as memoryblock version, but with ptr parameter, so you can pass ptr with size.
Works also for passing memoryblocks and a custom size.
See also:

- 47.6.13 CompressHC(InputData as MemoryBlock, compressionLevel as Integer = 9) as MemoryBlock 9613
- 47.6.15 CompressHC(InputData as string, compressionLevel as Integer = 9) as string 9614

47.6.15 CompressHC(InputData as string, compressionLevel as Integer = 9) as string

MBS Compression Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses a string with high compression.
Notes:

Raises exception on failure (OutOfMemoryException or UnsupportedOperationException) and returns string on success.

Compression level, with # being any value from 1 to 12. Higher values trade compression speed for compression ratio. Values above 12 are considered the same as 12. Recommended values are 1 for fast compression (default), and 9 for high compression. Speed/compression trade-off will vary depending on data to compress\. Decompression speed remains fast at all settings.
See also:

- 47.6.13 CompressHC(InputData as MemoryBlock, compressionLevel as Integer = 9) as MemoryBlock 9613
- 47.6.14 CompressHC(InputData as Ptr, Size as Integer, compressionLevel as Integer = 9) as MemoryBlock 9614

47.6.16 Decompress(CompressedData as MemoryBlock, UncompressedSize as Integer = 0) as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses a MemoryBlock.
Example:

```
// some 10 million zeros will compress well
Dim m As New MemoryBlock(100000000)

// compress
Dim c As MemoryBlock = LZ4MBS.Compress(m)

// decompress
Dim d As MemoryBlock = LZ4MBS.Decompress(c)

// and check
If d.Size = m.size Then
MsgBox "Sizes match"
Else
MsgBox "Sizes don't match"
End If
```

Notes:

Raises exception on failure (OutOfMemoryException or UnsupportedOperationException) and returns memoryblock on success.

If UncompressedSize is zero, we try to determinate it.
If you know the size of decompressed data, please pass it to make function more efficient.
See also:

- 47.6.17 Decompress(CompressedData as Ptr, Size as Integer, UncompressedSize as Integer = 0) as MemoryBlock 9616
- 47.6.18 Decompress(CompressedData as string, UncompressedSize as Integer = 0) as string 9616

47.6.17 Decompress(CompressedData as Ptr, Size as Integer, UncompressedSize as Integer = 0) as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses data in ptr.
Notes:

Same as memoryblock version, but with ptr parameter, so you can pass ptr with size.
Works also for passing memoryblocks and a custom size.

If UncompressedSize is zero, we try to determinate it.
If you know the size of decompressed data, please pass it to make function more efficient.
See also:

- 47.6.16 Decompress(CompressedData as MemoryBlock, UncompressedSize as Integer = 0) as MemoryBlock 9615
- 47.6.18 Decompress(CompressedData as string, UncompressedSize as Integer = 0) as string 9616

47.6.18 Decompress(CompressedData as string, UncompressedSize as Integer = 0) as string

MBS Compression Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses a String.
Example:

```
Dim m As String = "Lorem ipsum dolor sit amet, consectetur adipiscing elit. Lorem ipsum dolor site amat."

// make sure encoding is set
m = ConvertEncoding(m, encodings.UTF8)

// compress
Dim c As String = LZ4MBS.Compress(m)

// decompress
Dim d As String = LZ4MBS.Decompress(c)

// set encoding after decompressing
d = DefineEncoding(d, encodings.UTF8)
```

```
// and check
If d = m Then
MsgBox "Text match"
Else
MsgBox "Text doesn't match"
End If
```

Notes:

Raises exception on failure (OutOfMemoryException or UnsupportedOperationException) and returns memoryblock on success.

If UncompressedSize is zero, we try to determinate it.
If you know the size of decompressed data, please pass it to make function more efficient.
See also:

- 47.6.16 Decompress(CompressedData as MemoryBlock, UncompressedSize as Integer = 0) as MemoryBlock 9615
- 47.6.17 Decompress(CompressedData as Ptr, Size as Integer, UncompressedSize as Integer = 0) as MemoryBlock 9616

47.6.19 LibVersion as string

MBS Compression Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of the LZ4 library.

47.6.20 Constants

47.6.21 AccelerationDefault = 1

MBS Compression Plugin, Plugin Version: 19.5.

Function: The default acceleration level.

47.6.22 CompressionLevelDefault = 9

MBS Compression Plugin, Plugin Version: 19.5.

Function: One of the compression levels.
Notes: Default compression level.

47.6.23 CompressionLevelMax = 12

MBS Compression Plugin, Plugin Version: 19.5.

Function: One of the compression levels.
Notes: Maximum compression.

47.6.24 CompressionLevelMin = 3

MBS Compression Plugin, Plugin Version: 19.5.

Function: One of the compression levels.
Notes: Minimum compression.

47.6.25 CompressionLevelOptMin = 10

MBS Compression Plugin, Plugin Version: 19.5.

Function: One of the compression levels.

47.6.26 MaxInputSize = & h7E000000

MBS Compression Plugin, Plugin Version: 19.4.

Function: Maximum input size LZ4 can handle.

47.7 module PackbitsMBS

47.7.1 module PackbitsMBS

MBS Compression Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with functions for packbits compression/decompression.
Notes:

see wikipedia:
http://en.wikipedia.org/wiki/PackBits

47.7.4 Methods

47.7.5 Compress(data as MemoryBlock) as MemoryBlock

MBS Compression Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses data in a memoryblock.
Notes: Can raise out of memory exception if running low on memory.
See also:

- 47.7.6 Compress(data as string) as string 9619
- 47.7.7 Compress(InputFile as FolderItem, OutputFile as FolderItem) as boolean 9620

47.7.6 Compress(data as string) as string

MBS Compression Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Ccompresses data in a string.
Notes:

Can raise out of memory exception if running low on memory.
Returned data is a string without known encoding. If you plan to store it in a file, use binarystream class, not textoutputstream. If you plan to store it in a database, please use BLOB field. For storing in a text

field, you may need to use Base64 encoding.
See also:

- 47.7.5 Compress(data as MemoryBlock) as MemoryBlock 9619
- 47.7.7 Compress(InputFile as FolderItem, OutputFile as FolderItem) as boolean 9620

47.7.7 Compress(InputFile as FolderItem, OutputFile as FolderItem) as boolean

MBS Compression Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses data in a file.
Notes: Returns true on success.
See also:

- 47.7.5 Compress(data as MemoryBlock) as MemoryBlock 9619
- 47.7.6 Compress(data as string) as string 9619

47.7.8 Decompress(data as MemoryBlock) as MemoryBlock

MBS Compression Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses data in a memoryblock.
Notes: Can raise out of memory exception if running low on memory.
See also:

- 47.7.9 Decompress(data as string) as string 9620
- 47.7.10 Decompress(InputFile as FolderItem, OutputFile as FolderItem) as boolean 9621

47.7.9 Decompress(data as string) as string

MBS Compression Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses data in a string.
Notes:

Can raise out of memory exception if running low on memory.
Returned data is a string without known encoding.
See also:

- 47.7.8 Decompress(data as MemoryBlock) as MemoryBlock 9620
- 47.7.10 Decompress(InputFile as FolderItem, OutputFile as FolderItem) as boolean 9621

47.7.10 Decompress(InputFile as FolderItem, OutputFile as FolderItem) as boolean

MBS Compression Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses data in a file.
Notes: Returns true on success.
See also:

- 47.7.8 Decompress(data as MemoryBlock) as MemoryBlock 9620
- 47.7.9 Decompress(data as string) as string 9620

47.8 class UnZipFileInfoMBS

47.8.1 class UnZipFileInfoMBS

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class keeps the metadata for a zip file.

47.8.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr1

47.8.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr1

47.8.4 Properties

47.8.5 CompressedSize as UInt64

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The compressed file size.
Notes: (Read and Write property)

47.8.6 CompressionMethod as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The compression method.
Notes: (Read and Write property)

47.8.7 CRC as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The 32bit file checksum.
Notes: (Read and Write property)

47.8.8 Date as Date

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The date as a Xojo date object.
Notes: (Read and Write property)

47.8.9 Day as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

day of the month - [1,31]
(Read and Write property)

47.8.10 DiskNumStart as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Disk number start.
Notes: (Read and Write property)

47.8.11 DosDate as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last mod file date in DOS format.
Notes: (Read and Write property)

47.8.12 ExternalFileAttributes as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: External file attributes.
Notes: (Read and Write property)

47.8.13 Flag as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: general purpose bit flag.
Notes:

A 16 bit value.

The flag is a bit field with various values.
Last bit of the flag is encryption state: value is 1 (odd) for encrypted and 0 (even) for unencrypted value.
The bit values 2 and 4 define compression level between 0 to 9.

Flag Value	Encryption	Compression Level
0	no	6
1	yes	6
2	no	9
3	yes	9
4	no	2
5	yes	2
6	no	1
7	yes	1

(Read and Write property)

47.8.14 Hour as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

hours since midnight - [0,23]
(Read and Write property)

47.8.15 InternalFileAttributes as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal file attributes.
Notes: (Read and Write property)

47.8.16 Minute as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

minutes after the hour - [0,59]
(Read and Write property)

47.8.17 Month as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

months since January - [0,11]
(Read and Write property)

47.8.18 Second as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

seconds after the minute - [0,59]
(Read and Write property)

47.8.19 SizeFileComment as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: file comment length.
Notes: (Read and Write property)

47.8.20 SizeFileExtra as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: extra field length.
Notes: (Read and Write property)

47.8.21 SizeFilename as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: filename length.
Notes: (Read and Write property)

47.8.22 UncompressedSize as UInt64

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The uncompressed file size.
Notes: (Read and Write property)

47.8.23 Version as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version used to make the archive.
Notes: (Read and Write property)

47.8.24 VersionNeeded as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version needed to extract.
Notes: (Read and Write property)

47.8.25 Year as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

years - [1980..2044]
(Read and Write property)

47.9 class UnZipFilePositionMBS

47.9.1 class UnZipFilePositionMBS

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class contains information about a file in the zipfile.

47.9.2 Properties

47.9.3 NumberOfFile as UInt64

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index of the file.
Notes: (Read and Write property)

47.9.4 PositionInZipDirectory as UInt64

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Offset in zip file directory.
Notes: (Read and Write property)

47.10 class UnZipMBS

47.10.1 class UnZipMBS

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to decompress a zip archive.
Example:

```
// open zip archive
dim f as FolderItem=SpecialFolder.Desktop.Child("test.zip")
dim z as new UnZipMBS(f)

// let's start
z.GoToFirstFile
do

// get details on this file:
dim info as UnZipFileInfoMBS = z.FileInfo
dim name as string = z.FileName

if left(name,8) <>"__MACOSX" then // ignore Mac special files for metadata
z.OpenCurrentFile
if z.Lasterror=0 then

// create output file (if you want to support folders, this needs to be changed. See other examples)
dim outfile as folderitem = GetFolderItem(Name)
dim b as BinaryStream = BinaryStream.Create(outfile, true)
dim s as string

// now read 100 KB chunks and write them to new file
do
s=z.ReadCurrentFile(100000)
b.Write s
loop until lenb(s)=0

// cleanup
b.Close
z.CloseCurrentFile

end if
end if

// move to next file until we reach the end
z.GoToNextFile
loop until z.Lasterror<>0
```

Notes:

This is a simple class which uses zlib and has some limitations:

- only deflate as compression method
- only one date per file is preserved
- no resource forks on Mac OS
- no text encoding handling
- no Apple or Microsoft extensions for special file flags or permissions.

See also ArchiveReaderMBS and ArchiveWriterMBS classes for more features and compression formats.

47.10.6 Methods

47.10.7 Close

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Close a ZipFile.
Notes:

Use CloseCurrentFile to close any open file before using Close.
Lasterror is UnZipOK on success.

47.10.8 CloseCurrentFile

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Close the file in the zip archive opened with OpenCurrentFile.
Notes: Lasterror is set to UnzipCRCError if all the file was read but the CRC was not correct.

47.10.9 Comment as string

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the global comment string of the ZipFile.

47.10.10 CommentSize as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Size of the global comment of the zipfile.

47.10.11 CompareFileNames(filename1 as string, filename2 as string, CaseSensitive as Integer) as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compare two filename (fileName1,fileName2).
Notes:

If iCaseSenisivity = 1, comparision is case sensitivity (like strcmp)
If iCaseSenisivity = 2, comparision is not case sensitivity (like strcmpi or strcasecmp)
If iCaseSenisivity = 0, case sensitivity is defaut of your operating system (like 1 on Unix, 2 on Windows)

47.10.12 Constructor(data as memoryblock)

MBS Compression Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Open a Zip file from data in the memoryblock.
Notes:

The Handle property is zero on failure and not zero on success.
The memory block must have a known size.
See also:

- 47.10.13 Constructor(data as string) 9631
- 47.10.14 Constructor(file as folderitem) 9632
- 47.10.15 Constructor(file as folderitem, Offset as Integer) 9632

47.10.13 Constructor(data as string)

MBS Compression Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Open a Zip file from data in the string.
Notes: The Handle property is zero on failure and not zero on success.
See also:

- 47.10.12 Constructor(data as memoryblock) 9631
- 47.10.14 Constructor(file as folderitem) 9632
- 47.10.15 Constructor(file as folderitem, Offset as Integer) 9632

47.10.14 Constructor(file as folderitem)

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Open a Zip file from a file.
Notes:

The Handle property is zero on failure and not zero on success.

If you run this class in a thread, please make sure your thread has a big stack (1 MB or more). Else it will crash.
See also:

- 47.10.12 Constructor(data as memoryblock) 9631
- 47.10.13 Constructor(data as string) 9631
- 47.10.15 Constructor(file as folderitem, Offset as Integer) 9632

47.10.15 Constructor(file as folderitem, Offset as Integer)

MBS Compression Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Open a Zip file from a file starting at the offset.
Notes: The Handle property is zero on failure and not zero on success.
See also:

- 47.10.12 Constructor(data as memoryblock) 9631
- 47.10.13 Constructor(data as string) 9631
- 47.10.14 Constructor(file as folderitem) 9632

47.10.16 Count as UInt64

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Total number of entries in the zip archive.
Notes: This value is stored in the zip archive as 16 bit integer, so maximum value is 65535. The plugin can extract more files than that number.

47.10.17 EOF as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns 1 if you are on the end of a file.
Notes: This is not to test whether you are on the end of the zip archive.

47.10.18 ExtractFiles(DestFolder as FolderItem, ExtractWithoutPath as boolean = false, Overwrite as Boolean = false, Password as String = """, byref ErrorMessage as String) as boolean

MBS Compression Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simple function to extract all files from archive into folder.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.zip")

dim folder as FolderItem = SpecialFolder.Desktop.Child("test")
folder.CreateAsFolder

dim u as new UnZipMBS(f)
dim error as string
if u.ExtractFiles(folder, error) then
MsgBox "OK"
else
MsgBox "Error: "+error
end if
```

Notes:

DestFolder: Destination folder.
ExtractWithoutPath: If true, all files are put in one folder.
Overwrite: Whether to allow overwriting files.
Password: The password to decrypt files.
ErrorMessage: An english error message.

Returns true on success or false on failure.
This function does not restore file permissions or other metadata.

And it may not work with non ASCII characters.

If you need more control over files being extracted, stored or error checking, please use example projects coming with plugin.

47.10.19 FileInfo as UnZipFileInfoMBS

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries file information for the current file.
Notes: Returns nil on any error.

47.10.20 FileName as string

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The filename of the current open file.
Notes:

This name has no text encoding defined, as the plugin has no idea what text encoding was used. You may need to define the text encoding as being ASCII, Windows, MacRoman or whatever, when you work with this file name.
This name may include path components for folders.

47.10.21 GetLocalExtrafield as string

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read extra field from the current file (opened by unzOpenCurrentFile)
Notes: This is the local-header version of the extra field (sometimes, there is more info in the local-header version than in the central-header)

47.10.22 GoToFirstFile

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the current file of the zipfile to the first file.
Notes: Lasterror is UnzipOk on success.

47.10.23 GoToNextFile

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the current file of the zipfile to the next file.
Notes: Lasterror is UnzipOk if there is no problem and UnzipEndOfListError if the actual file was the latest.

47.10.24 LocateFile(filename as string, CaseSensitive as Integer)

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Try locate the file filename in the zipfile.
Example:

```
// open zip archive
dim f as FolderItem=SpecialFolder.Desktop.Child("test.zip")
dim z as new UnZipMBS(f)

// let's search the file
z.LocateFile "test.rtf",2

if z.Lasterror = z.UnzipOk then
dim info as UnZipFileInfoMBS = z.FileInfo
MsgBox "OK: "+str(info.UncompressedSize)+" bytes"
else
MsgBox "Failed."
end if
```

Notes:

For the CaseSensitivity signification, see CompareFileNames. Text encoding must match the text encoding of the files.

Lasterror is UnzipOk if the file is found. It becomes the current file, UnzipEndOfListError if the file is not found.

47.10.25 OpenCurrentFile

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Open for reading data the current file in the zipfile.
See also:

- 47.10.26 OpenCurrentFile(byref method as Integer, byref level as Integer, raw as boolean) 9636

- 47.10.27 OpenCurrentFile(byref method as Integer, byref level as Integer, raw as boolean, password as string) 9636
- 47.10.28 OpenCurrentFile(password as string) 9636

47.10.26 OpenCurrentFile(byref method as Integer, byref level as Integer, raw as boolean)

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same than OpenCurrentFile, but opens file for reading raw data (not uncompressed).
Notes:

if raw=true the file data is returned uncompressed. If raw is false, it is decompressed for you.
Method will receive the method of compression.
level will receive the level of compression.
See also:

- 47.10.25 OpenCurrentFile 9635
- 47.10.27 OpenCurrentFile(byref method as Integer, byref level as Integer, raw as boolean, password as string) 9636
- 47.10.28 OpenCurrentFile(password as string) 9636

47.10.27 OpenCurrentFile(byref method as Integer, byref level as Integer, raw as boolean, password as string)

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same than OpenCurrentFile, but opens file for reading raw data (not uncompressed) and with a password.
Notes:

if raw=true the file data is returned uncompressed. If raw is false, it is decompressed for you.
Method will receive the method of compression.
level will receive the level of compression.

- 47.10.26 OpenCurrentFile(byref method as Integer, byref level as Integer, raw as boolean) 9636
- 47.10.28 OpenCurrentFile(password as string) 9636

47.10.28 OpenCurrentFile(password as string)

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Open for reading data the current file in the zipfile.
Notes: password is a crypting password.
See also:

- 47.10.25 OpenCurrentFile 9635
- 47.10.26 OpenCurrentFile(byref method as Integer, byref level as Integer, raw as boolean) 9636
- 47.10.27 OpenCurrentFile(byref method as Integer, byref level as Integer, raw as boolean, password as string) 9636

47.10.29 Position as UInt64

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current position in uncompressed data.

47.10.30 Position2 as UInt64

MBS Compression Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current position in compressed data.
Notes: This property is useful to show progressbar with progress over reading the original zip file.

47.10.31 ReadCurrentFile(size as Integer) as string

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read bytes from the current file (opened by OpenCurrentFile).
Notes: Returns "" on any error or on file end.

47.10.32 Properties

47.10.33 Handle as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle for the unzip object.
Notes: (Read and Write property)

47.10.34 Lasterror as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

47.10.35 FilePosition as UnZipFilePositionMBS

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current file position.
Notes:

You can read or set the current file you edit.
(Read and Write computed property)

47.10.36 Offset as UInt64

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the current index of the file in the zip directory.
Notes:

If you set this value, you basicly move to another file.
(Read and Write computed property)

47.10.37 Constants

47.10.38 CompressionBestCompression=9

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the compression level constants.

47.10.39 CompressionBestSpeed=1

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the compression level constants.

47.10.40 CompressionDefault=-1

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the compression level constants.

47.10.41 CompressionNo=0

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the compression level constants.

47.10.42 MethodDeflated=8

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the compression methods.

47.10.43 MethodNone=0

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the compression methods.

47.10.44 StrategyDefault=0

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the strategy constants.

47.10.45 StrategyFiltered=1

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the strategy constants.

47.10.46 StrategyFixed=4

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the strategy constants.

47.10.47 StrategyHuffmanOnly=2

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the strategy constants.

47.10.48 StrategyRLE=3

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the strategy constants.

Function: One of the error constants.

47.10.51 UnzipEndOfListError=-100

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the error constants.

47.10.52 UnzipInternalError=-104

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the error constants.

47.10.53 UnzipOk=0

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the error constants.

47.10.54 UnzipParameterError=-102

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the error constants.

47.11 class ZipFileInfoMBS

47.11.1 class ZipFileInfoMBS

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class keeps the metadata for a zip file.

47.11.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr1

47.11.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr1

47.11.4 Methods

47.11.5 SetDate(d as date)

MBS Compression Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the date with a Xojo date object.
Notes: A convenience function to make your life easier.

47.11.6 SetDateTime(d as dateTime)

MBS Compression Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the date with a Xojo dateTime object.
Notes: A convenience function to make your life easier.

47.11.7 Properties

47.11.8 Day as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

day of the month - [1,31]
(Read and Write property)

47.11.9 DosDate as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The date in the 32bit DOS format.
Notes:

If dos_date = 0, the plugin will calculate it from the day, month, year, hour, minute and second properties.
(Read and Write property)

47.11.10 ExternalFileAttributes as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: external file attributes.
Notes:

A 32 bit value.
(Read and Write property)

47.11.11 Hour as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

hours since midnight - [0,23]
(Read and Write property)

47.11.12 InternalFileAttributes as UInt32

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal file attributes.
Notes:

A 16 bit value.
(Read and Write property)

47.11.13 Minute as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

minutes after the hour - [0,59]
(Read and Write property)

47.11.14 Month as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

months since January - [0,11]
(Read and Write property)

47.11.15 Second as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

seconds after the minute - [0,59]
(Read and Write property)

47.11.16 Year as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file time.
Notes:

years - [1980..2044]
(Read and Write property)

47.12 class ZipMBS

47.12.1 class ZipMBS

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for writing to a zip file.
Notes:

This is a simple class which uses zlib and has some limitations:

- only deflate as compression method
- only one date per file is preserved
- no resource forks on Mac OS
- no encoding handling
- no Apple or Microsoft extensions for special file flags or permissions.

But it works nice to provide a zip file to clients. For example a download of JPEG files in an archive with one download from Web Edition.

Be aware that you can't compress Mac applications with this class, as the we don't preserve permissions, so the decompressed file has not the right flags set to make it executable.

See also ArchiveReaderMBS and ArchiveWriterMBS classes for more features and compression formats.

47.12.6 Methods

47.12.7 Close(GlobalComment as string="")

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Close the zipfile.

47.12.8 CloseFile

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Close the current file in the zipfile.

47.12.9 CloseFileRaw(UncompressedSize as Integer, CRC32 as Integer)

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Close the current file in the zipfile.
Notes:

For files opened with parameter raw=true in CreateFile
UncompressedSize and crc32 are value for the uncompressed size,

47.12.10 CompressFiles(ZipFile as FolderItem, SourceFolder as FolderItem, files() as string, Overwrite as Integer = 0, Password as string = "", CompressionLevel as Integer = 9, byref ErrorMessage as string) as Integer

MBS Compression Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simple implementation of a batch file compression method.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.zip")
dim folder as FolderItem = SpecialFolder.Pictures // some folder with images
dim files() As string

dim c as Integer = folder.count
for i as Integer = 1 to c
dim file as FolderItem = folder.TrueItem(i)

if file.Directory then
// we go here for this example only one level deep

dim subfolder as FolderItem = file
dim cc as Integer = subfolder.count
for ii as Integer = 1 to cc
dim subfile as FolderItem = subfolder.TrueItem(ii)
if subfile.name.Right(4) = ".jpg" then
// here we pass a relative path
files.Append subfolder.name+"/"+subfile.name
end if
next

else

if file.name.Right(4) = ".jpg" then
// just padd a file name for files directly in source folder
files.Append file.name
end if
end if
next

dim ErrorMessage as string
dim e as Integer = ZipMBS.CompressFiles(f, folder, files, errorMessage)

MsgBox "Error: "+str(e)
```

Notes:

ZipFile: The destination zip file.
SourceFolder: The source folder for the files.
files: relative file paths to source folder.
Overwrite: pass 1 to overwrite zip archive, 2 to append or 0 to not overwrite.
Password: the password for encryption.
CompressionLevel: The compression level to use from 0 (no compression) to 9 (maximum).
ErrorMessage: An english error message.

Returns 0 on success or error code on failure.

This is a simple function to compress a couple of files.
It does not preserve file permissions on Mac/Linux or other metadata.
And it may not work with non ASCII characters.

If you need more control over files being added, compression or error checking, please use example projects coming with plugin.

47.12.11 Constructor(file as folderitem, append as Integer = 0)

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a zipfile.
Notes:

If the file exist and append is AppendStatusCreateAfter, the zip will be created at the end of the file.
(useful if the file contain a self extractor code)
If the file exist and append is AppendStatusAddInZip, we will add files in existing zip (be sure you don't add file that doesn't exist)
If the zipfile cannot be opened, the handle value will be zero.

AppendStatusCreateAfter seems not to be working currently.

If you run this class in a thread, please make sure your thread has a big stack (1 MB or more). Else it will crash.

47.12.12 CreateFile(Filename as string, FileInfo as ZipFileInfoMBS, ExtraLocal as string = "", ExtraGlobal as string = "", Comment as String = "", CompressionMethod as Integer = 8, Level as Integer = 9, Zip64 as boolean = false)

MBS Compression Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Open a file in the ZIP for writing.
Notes:

filename: the filename in zip. This can include path information with slash as delimiter. e.g. "folder-name/file.txt"
FileInfo: the file date.
ExtraLocal: contains the extrafield data the the local header.

ExtraGlobal: contains the extrafield data the the local header.
Comment: comment contain the comment string
CompressionMethod: contain the compression method (see Method* constants)
Level: contain the level of compression (a value from -1 to 9. see Compression* constants)
Zip64: If you want to have the zip file support more than 2 GB of data, set this to true to create a 64 bit file.
See also:

- 47.12.14 CreateFile(Filename as string, FileInfo as ZipFileInfoMBS, ExtraLocal as string, ExtraGlobal as string, Comment as String, CompressionMethod as Integer, Level as Integer, Zip64 as boolean, Raw as boolean, WindowBits as Integer, MemLevel as Integer, Strategy as Integer, Password as string, crcForCtypting as UInt32) 9650
- 47.12.15 CreateFile(Filename as string, FileInfo as ZipFileInfoMBS, ExtraLocal as string, ExtraGlobal as string, Comment as String, CompressionMethod as Integer, Level as Integer, Zip64 as boolean, Raw as boolean, WindowBits as Integer, MemLevel as Integer, Strategy as Integer, Password as string, crcForCtypting as UInt32, versionMadeBy as UInt32, flagBase as UInt32) 9651

47.12.13 CreateFile(Filename as string, FileInfo as ZipFileInfoMBS, ExtraLocal as string, ExtraGlobal as string, Comment as String, CompressionMethod as Integer, Level as Integer, Zip64 as boolean, Raw as boolean)

MBS Compression Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Open a file in the ZIP for writing with the possibility to write raw files.
Notes:

filename: the filename in zip. This can include path information with slash as delimiter. e.g. "folder-name/file.txt"
FileInfo: the file date.
ExtraLocal: contains the extrafield data the the local header.
ExtraGlobal: contains the extrafield data the the local header.
Comment: comment contain the comment string
CompressionMethod: contain the compression method (see Method* constants)
Level: contain the level of compression (a value from -1 to 9. see Compression* constants)
Zip64: If you want to have the zip file support more than 2 GB of data, set this to true to create a 64 bit file.
Raw: If true you read the file raw (the data will not be compressed).
See also:

- 47.12.12 CreateFile(Filename as string, FileInfo as ZipFileInfoMBS, ExtraLocal as string = "", ExtraGlobal as string = "", Comment as String = "", CompressionMethod as Integer = 8, Level as Integer = 9, Zip64 as boolean = false) 9648

- 47.12.14 CreateFile(Filename as string, FileInfo as ZipFileInfoMBS, ExtraLocal as string, ExtraGlobal as string, Comment as String, CompressionMethod as Integer, Level as Integer, Zip64 as boolean, Raw as boolean, WindowBits as Integer, MemLevel as Integer, Strategy as Integer, Password as string, crcForCtypting as UInt32) 9650
- 47.12.15 CreateFile(Filename as string, FileInfo as ZipFileInfoMBS, ExtraLocal as string, ExtraGlobal as string, Comment as String, CompressionMethod as Integer, Level as Integer, Zip64 as boolean, Raw as boolean, WindowBits as Integer, MemLevel as Integer, Strategy as Integer, Password as string, crcForCtypting as UInt32, versionMadeBy as UInt32, flagBase as UInt32) 9651

47.12.14 CreateFile(Filename as string, FileInfo as ZipFileInfoMBS, ExtraLocal as string, ExtraGlobal as string, Comment as String, CompressionMethod as Integer, Level as Integer, Zip64 as boolean, Raw as boolean, WindowBits as Integer, MemLevel as Integer, Strategy as Integer, Password as string, crcForCtypting as UInt32)

MBS Compression Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Open a file in the ZIP for writing with the possibility to write raw files, chnage the compression and add a password.
Notes:

filename: the filename in zip. This can include path information with slash as delimiter. e.g. "folder-name/file.txt"
FileInfo: the file date.
ExtraLocal: contains the extrafield data the the local header.
ExtraGlobal: contains the extrafield data the the local header.
Comment: comment contain the comment string
CompressionMethod: contain the compression method (see Method* constants)
Level: contain the level of compression (a value from -1 to 9. see Compression* constants)
Zip64: If you want to have the zip file support more than 2 GB of data, set this to true to create a 64 bit file.
Raw: If true you read the file raw (the data will not be compressed).
windowBits: Parameters for zlib compression. (for example -15)
memLevel: Parameters for zlib compression. (for example 8 or 9)
Strategy: Parameters for zlib compression. (See Strategy* constants)
Password: The password to use.
crcForCtypting: the CRC value of the input file.

The windowBits parameter is the base two logarithm of the window size (the size of the history buffer). It should be in the range 8..15 for this version of the library. Larger values of this parameter result in better compression at the expense of memory usage. The default value is 15.

windowBits can also be -8..-15 for raw deflate. In this case, -windowBits determines the window size.

The memLevel parameter specifies how much memory should be allocated for the internal compression state.

memLevel=1 uses minimum memory but is slow and reduces compression ratio; memLevel=9 uses maximum memory for optimal speed. The default value is 8. See zconf.h for total memory usage as a function of windowBits and memLevel.

The strategy parameter is used to tune the compression algorithm. Use the value StrategyDefault for normal data, StrategyFiltered for data produced by a filter (or predictor), StrategyHuffmanOnly to force Huffman encoding only (no string match), or StrategyRLE to limit match distances to one (run-length encoding). Filtered data consists mostly of small values with a somewhat random distribution. In this case, the compression algorithm is tuned to compress them better. The effect of StrategyFiltered is to force more Huffman coding and less string matching; it is somewhat intermediate between StrategyDefault and StrategyHuffmanOnly. StrategyRLE is designed to be almost as fast as StrategyHuffmanOnly, but give better compression for PNG image data. The strategy parameter only affects the compression ratio but not the correctness of the compressed output even if it is not set appropriately. StrategyFixed prevents the use of dynamic Huffman codes, allowing for a simpler decoder for special applications.

47.12.16 Write(data as string)

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write data in the zipfile.
Notes: A file in the zip archive must have been created.

47.12.17 Properties

47.12.18 Handle as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle for the open zip archive.
Notes:

If 0 the constructor failed to create the file.
(Read and Write property)

47.12.19 Lasterror as Integer

MBS Compression Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

47.12.20 ZipFileVersion32 as Integer

MBS Compression Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number to put in Zip file header for 32bit zip archives.
Notes:

Default is 20 for version 4.5. Apple Finder seems to prefer 10 for 1.0.
(Read and Write property)

47.12.21 ZipFileVersion64 as Integer

MBS Compression Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number to put in Zip file header for 32bit zip archives.
Notes:

Default is 45 for version 4.5. Apple Finder seems to prefer 10 for 1.0.
(Read and Write property)

47.12.22 Constants

47.12.23 AppendStatusAddInZip=2

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the values for the constructor.

47.12.24 AppendStatusCreate=0

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the values for the constructor.

47.12.25 AppendStatusCreateAfter=1

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the values for the constructor.

47.12.26 CompressionBestCompression=9

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the compression level constants.

47.12.27 CompressionBestSpeed=1

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the compression level constants.

47.12.28 CompressionDefault=-1

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the compression level constants.

47.12.29 CompressionNo=0

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the error constants.

47.12.39 ZipOk=0

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the error constants.

47.12.40 ZipParameterError=-102

MBS Compression Plugin, Plugin Version: 8.6.

Function: One of the error constants.

47.13 class ZLibCompressMBS

47.13.1 class ZLibCompressMBS

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for zlib compression.
Notes: See also ArchiveReaderMBS and ArchiveWriterMBS classes for more features and compression formats.

47.13.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.4pr3

47.13.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.4pr3

47.13.4 Methods

47.13.5 Adler32(start as UInt32, data as string) as UInt32

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Adler Checksum about a given string.
Notes:

Set start to 0 for the first call.
Later you can pass the result as the new start value to add data to your checksum.

This function is part of the zlib library and given as a free utility function to this class.

47.13.6 close

MBS Compression Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

47.13.7 Constructor(BufferSize as Integer=20000)

MBS Compression Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes:

The buffer size you specify is the output buffer size.
If this size is small, you need to flush with ProcessZip.

47.13.8 CRC32(start as UInt32, data as string) as UInt32

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about a given string.
Notes:

Set start to 0 for the first call.
Later you can pass the result as the new start value to add data to your checksum.

This function is part of the zlib library and given as a free utility function to this class.

47.13.9 EndZip

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the current compression stream.
Notes:

You may check the Output buffer after this.
Error is set.

47.13.10 GetOutput as string

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the contents of the output buffer.
Notes: The buffer is cleared after this function returns.

47.13.11 InitZip(level as Integer)

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the stream.
Notes:

Level is from 0 to 9.
Error is set.

47.13.12 InputAvail as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes available in the input buffer.

47.13.13 OutputSize as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of bytes available in the output buffer.

47.13.14 ProcessFinish

MBS Compression Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as process, but for finishing.
Notes:

If error is zero after this function, please call it again.
Error is 1 if stream is at end, so you can call EndZip to finish.

47.13.15 ProcessZip(Flush as boolean=false)

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does zip compression.
Notes:

Reduces the size of the input buffer and writes new data to the output buffer.
If the input buffer is not empty after this call, you need to call it again, but empty the output buffer before.
Error is set.

If flush is true, the data is flushed to output. Using flush=true all the the time will slow down compression, so use it only on the end to clear the output buffers.

47.13.16 SetInput(data as MemoryBlock) as boolean

MBS Compression Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes:

Returns true if successfull.
The current input buffer size is 128 K, so you may use something smaller.
See also:

- 47.13.17 SetInput(data as string) as boolean 9661

47.13.17 SetInput(data as string) as boolean

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes:

Returns true if successfull.
The current input buffer size is 128 K, so you may use something smaller.
See also:

- 47.13.16 SetInput(data as MemoryBlock) as boolean 9661

47.13.18 Properties

47.13.19 CRC as UInt32

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Adler32 CRC value of the uncompressed data.
Notes: (Read only property)

47.13.20 Error as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes:

Values:

(Read and Write property)

Z_OK	0	(no error)
Z_STREAM_END	1	(Should be handles by the plugin inside)
Z_NEED_DICT	2	
Z_ERRNO	-1	
Z_STREAM_ERROR	-2	
Z_DATA_ERROR	-3	
Z_MEM_ERROR	-4	
Z_BUF_ERROR	-5	
Z_VERSION_ERROR	-6	

47.13.21 ErrorMessage as String

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error message for the last error.
Notes: (Read only property)

47.13.22 OutputBufferSize as Integer

MBS Compression Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output buffer size used in the constructor.
Notes: (Read only property)

47.13.23 TotalInput as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes processed so far.
Notes: (Read and Write property)

47.13.24 TotalOutput as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes processed so far.
Notes: (Read and Write property)

47.13.25 Version as String

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the used zlib library.
Notes: (Read only property)

47.13.26 Constants

47.13.27 kASCII = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the data type constants.

47.13.28 kBEST_COMPRESSION = 9

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression level constants.

47.13.29 kBEST_SPEED = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression level constants.

47.13.30 kBINARY = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the data type constants.

47.13.31 kBLOCK = 5

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.13.32 kBUF_ERROR = -5

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.13.33 kDATA_ERROR = -3

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.13.34 kDEFAULT_COMPRESSION = -1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression level constants.

47.13.35 kDEFAULT_STRATEGY = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression strategy constants.

47.13.36 kDEFLATED = 8

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression method constants.
Notes: The deflate compression method (the only one supported in this version)

47.13.37 kERRNO = -1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.13.38 kFILTERED = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression strategy constants.

47.13.39 kFINISH = 4

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.13.40 kFIXED = 4

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression strategy constants.

47.13.41 kFULL_FLUSH = 3

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.13.42 kHUFFMAN_ONLY = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression strategy constants.

47.13.43 kMEM_ERROR = -4

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.13.44 kNEED_DICT = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.13.45 kNO_COMPRESSION = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression level constants.

47.13.46 kNO_FLUSH = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.13.47 kNULL = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: The null value.

47.13.48 kOK = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.13.49 kPARTIAL_FLUSH = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.13.50 kRLE = 3

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression strategy constants.

47.13.51 kSTREAM_END = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.13.52 kSTREAM_ERROR = -2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.13.53 kSYNC_FLUSH = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.13.54 kTEXT = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the data type constants.

47.13.55 kUNKNOWN = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the data type constants.

47.13.56 kVERSION_ERROR = -6

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.14 class ZLibDecompressMBS

47.14.1 class ZLibDecompressMBS

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for zlib decompression.
Notes: See also ArchiveReaderMBS and ArchiveWriterMBS classes for more features and compression formats.

47.14.2 Methods

47.14.3 Adler32(start as UInt32, data as string) as UInt32

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Adler Checksum about a given string.
Notes:

Set start to 0 for the first call.
Later you can pass the result as the new start value to add data to your checksum.

This function is part of the zlib library and given as a free utility function to this class.

47.14.4 close

MBS Compression Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

47.14.5 Constructor(BufferSize as Integer=20000)

MBS Compression Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes:

The buffer size you specify is the output buffer size.
If this size is small, you need to flush with ProcessZip.

47.14.6 CRC32(start as UInt32, data as string) as UInt32

MBS Compression Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about a given string.
Notes:

Set start to 0 for the first call.
Later you can pass the result as the new start value to add data to your checksum.

This function is part of the zlib library and given as a free utility function to this class.

47.14.7 EndZip

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the current decompression stream.
Notes:

You may check the Output property after this.
Error is set.

47.14.8 GetOutput as string

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the content of the output buffer.
Notes: The buffer is cleared after this function returns.

47.14.9 InitZip

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the stream.
Notes: Error is set.

47.14.10 InputAvail as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes available in the input buffer.

47.14.11 OutputSize as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes available in the output buffer.

47.14.12 ProcessZip(Flush as boolean=false)

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does zip compression.
Notes:

Reduces the size of the input buffer and writes new data to the output buffer.
If the input buffer is not "" after this call, you need to call it again, but empty the output buffer before.
Error is set.

If flush is true, the data is flushed to output. Using flush=true all the the time will slow down compression, so use it only on the end to clear the output buffers.

47.14.13 SetInput(data as Memoryblock) as boolean

MBS Compression Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes:

Returns true if successfull.
The current plugin uses a 128 K input buffer.
See also:

- 47.14.14 SetInput(data as string) as boolean 9671

47.14.14 SetInput(data as string) as boolean

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the input buffer.
Notes:

Returns true if successfull.
The current plugin uses a 128 K input buffer.
See also:

- 47.14.13 SetInput(data as Memoryblock) as boolean 9671

47.14.15 Properties

47.14.16 CRC as UInt32

MBS Compression Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CRC checksum.
Notes: (Read only property)

47.14.17 Error as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes:

Values:

Z_OK	0	(no error)
Z_STREAM_END	1	(Should be handles by the plugin inside)
Z_NEED_DICT	2	
Z_ERRNO	-1	
Z_STREAM_ERROR	-2	
Z_DATA_ERROR	-3	
Z_MEM_ERROR	-4	
Z_BUF_ERROR	-5	
Z_VERSION_ERROR	-6	

(Read and Write property)

47.14.18 ErrorMessage as String

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error message for the last error.
Notes: (Read only property)

47.14.19 OutputBufferSize as Integer

MBS Compression Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output buffer size used in the constructor.
Notes: (Read only property)

47.14.20 TotalInput as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes processed so far.
Notes: (Read and Write property)

47.14.21 TotalOutput as Integer

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes processed so far.
Notes: (Read and Write property)

47.14.22 Version as String

MBS Compression Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the used zlib library.
Notes: (Read only property)

47.14.23 Constants

47.14.24 kASCII = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the data type constants.

47.14.25 kBEST_COMPRESSION = 9

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression level constants.

47.14.26 kBEST_SPEED = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression level constants.

47.14.27 kBINARY = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the data type constants.

47.14.28 kBLOCK = 5

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.14.29 kBUF_ERROR = -5

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.14.30 kDATA_ERROR = -3

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.14.31 kDEFAULT_COMPRESSION = -1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression level constants.

47.14.32 kDEFAULT_STRATEGY = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression strategy constants.

47.14.33 kDEFLATED = 8

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression method constants.
Notes: The deflate compression method (the only one supported in this version)

47.14.34 kERRNO = -1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.14.35 kFILTERED = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression strategy constants.

47.14.36 kFINISH = 4

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.14.37 kFIXED = 4

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression strategy constants.

47.14.38 kFULL_FLUSH = 3

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.14.39 kHUFFMAN_ONLY = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression strategy constants.

47.14.40 kMEM_ERROR = -4

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.14.41 kNEED_DICT = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.14.42 kNO_COMPRESSION = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression level constants.

47.14.43 kNO_FLUSH = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.14.44 kNULL = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: The null value.

47.14.45 kOK = 0

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.14.46 kPARTIAL_FLUSH = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.14.47 kRLE = 3

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the compression strategy constants.

47.14.48 kSTREAM_END = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.14.49 kSTREAM_ERROR = -2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.14.50 kSYNC_FLUSH = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the flush constants.

47.14.51 kTEXT = 1

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the data type constants.

47.14.52 kUNKNOWN = 2

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the data type constants.

47.14.53 kVERSION_ERROR = -6

MBS Compression Plugin, Plugin Version: 9.7.

Function: One of the return codes for the compression/decompression functions.
Notes: Negative values are errors, positive values are used for special but normal events.

47.15 class ZStdMBS

47.15.1 class ZStdMBS

MBS Compression Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for ZStandard compression scheme.
Example:

```
Dim InputText As String = "Hello World. Hello World. Hello World. Hello World. Just a test! Hello World. Testing "

Dim Compressed As String = ZStdMBS.Compress(InputText)
Dim OutputText As String = ZStdMBS.Decompress(Compressed).DefineEncoding(encodings.UTF8)

Break
```

47.15.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 22.2
- MBS Xojo Plugins, version 22.2pr6

47.15.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 22.2
- MBS Xojo Plugins, version 22.2pr6

47.15.4 Methods

47.15.5 Compress(Data as MemoryBlock, CompressionLevel as Integer = 1) as MemoryBlock

MBS Compression Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compresses the given MemoryBlock.
Example:

```
Dim InputText As String = "Hello World. Hello World. Hello World. Hello World. Just a test! Hello World. Testing "
Dim InputData As MemoryBlock = InputText

Dim Compressed As MemoryBlock = ZStdMBS.Compress(InputData)
Dim OutputData As MemoryBlock = ZStdMBS.Decompress(Compressed)
```

```
Dim OutputText As String = DefineEncoding(OutputData, encodings.UTF8)

Break
```

Notes:

CompressionLevel range from 1 to 22 where 22 is best with most memory usage.

Raises exception (UnsupportedOperationException or OutOfMemoryException) in case it fails. Please read message property for details.
See also:

- 47.15.6 Compress(Data as String, CompressionLevel as Integer = 1) as String 9680

47.15.6 Compress(Data as String, CompressionLevel as Integer = 1) as String

MBS Compression Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compresses the given string.
Example:

```
Dim InputText As String = "Hello World. Hello World. Hello World. Hello World. Just a test! Hello World. Testing "

Dim Compressed As String = ZStdMBS.Compress(InputText)
Dim OutputData As String = ZStdMBS.Decompress(Compressed).DefineEncoding(encodings.UTF8)

Break
```

Notes:

CompressionLevel range from 1 to 22 where 22 is best with most memory usage.

Raises exception (UnsupportedOperationException or OutOfMemoryException) in case it fails. Please read message property for details.
See also:

- 47.15.5 Compress(Data as MemoryBlock, CompressionLevel as Integer = 1) as MemoryBlock 9679

47.15.7 Decompress(Data as MemoryBlock) as MemoryBlock

MBS Compression Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decompresses MemoryBlock.
Example:

```
Dim InputText As String = "Hello World. Hello World. Hello World. Hello World. Just a test! Hello World. Testing "
Dim InputData As MemoryBlock = InputText

Dim Compressed As MemoryBlock = ZStdMBS.Compress(InputData)
Dim OutputData As MemoryBlock = ZStdMBS.Decompress(Compressed)

Dim OutputText As String = DefineEncoding(OutputData, encodings.UTF8)

Break
```

Notes: Raises exception (UnsupportedOperationException or OutOfMemoryException) in case it fails. Please read message property for details.
See also:

- 47.15.8 Decompress(Data as String) as String 9681

47.15.8 Decompress(Data as String) as String

MBS Compression Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decompresses string.
Example:

```
Dim InputText As String = "Hello World. Hello World. Hello World. Hello World. Just a test! Hello World. Testing "

Dim Compressed As String = ZStdMBS.Compress(InputText)
Dim OutputData As String = ZStdMBS.Decompress(Compressed).DefineEncoding(encodings.UTF8)

Break
```

Notes: Raises exception (UnsupportedOperationException or OutOfMemoryException) in case it fails. Please read message property for details.
See also:

- 47.15.7 Decompress(Data as MemoryBlock) as MemoryBlock 9680

Chapter 48

Contacts

48.1 class CNChangeHistoryAddContactEventMBS

48.1.1 class CNChangeHistoryAddContactEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A contact was added.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.1.2 Blog Entries

48.1.4 Methods

48.1.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.1.6 Properties

48.1.7 contact as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The contact added.
Notes: (Read only property)

48.1.8 containerIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The identifier for the container.
Notes: (Read only property)

48.2 class CNChangeHistoryAddGroupEventMBS

48.2.1 class CNChangeHistoryAddGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A group was added.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.2.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.2.3 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.2.4 Methods

48.2.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.2.6 Properties

48.2.7 containerIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The identifier for the container.
Notes: (Read only property)

48.2.8 group as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The group.
Notes: (Read only property)

48.3 class CNChangeHistoryAddMemberToGroupEventMBS

48.3.1 class CNChangeHistoryAddMemberToGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A contact was added to a group.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.3.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.3.3 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.3.4 Methods

48.3.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.3.6 Properties

48.3.7 group as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The group.
Notes: (Read only property)

48.3.8 member as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The member added.
Notes: (Read only property)

48.4 class CNChangeHistoryAddSubgroupToGroupEventMBS

48.4.1 class CNChangeHistoryAddSubgroupToGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A subgroup was added to a group.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.4.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.4.3 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.4.4 Methods

48.4.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.4.6 Properties

48.4.7 group as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The group.
Notes: (Read only property)

48.4.8 subgroup as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The sub group.
Notes: (Read only property)

48.5 class CNChangeHistoryDeleteContactEventMBS

48.5.1 class CNChangeHistoryDeleteContactEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A contact was removed.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.5.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.5.3 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.5.4 Methods

48.5.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.5.6 Properties

48.5.7 contactIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The identifier for the deleted contact.
Notes: (Read only property)

48.6 class CNChangeHistoryDeleteGroupEventMBS

48.6.1 class CNChangeHistoryDeleteGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A group was deleted.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.6.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.6.3 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.6.4 Methods

48.6.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.6.6 Properties

48.6.7 groupIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The identifier on the deleted group.
Notes: (Read only property)

48.7 class CNChangeHistoryDropEverythingEventMBS

48.7.1 class CNChangeHistoryDropEverythingEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Drop all cached information your app has persisted.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.7.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.7.3 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.7.4 Methods

48.7.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.8 class CNChangeHistoryEventMBS

48.8.1 class CNChangeHistoryEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The base class for changing events.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.8.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.8.3 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.8.4 Methods

48.8.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.8.6 Properties

48.8.7 className as String

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The class name of the Objective-C class.
Notes: (Read only property)

48.8.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

48.9 class CNChangeHistoryFetchRequestMBS

48.9.1 class CNChangeHistoryFetchRequestMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Specifies the criteria to fetch change history.
Notes:

Changes to contacts are always returned.
All changes are coalesced to remove redundant adds, updates and deletes.
This request is used with enumeratorForChangeHistoryFetchRequest in CNContactStoreMBS class.
Subclass of the CNContactFetchRequestMBS class.

48.9.2 Blog Entries

- Contacts history for Xojo
- MBS Xojo Plugins, version 22.0pr7

48.9.3 Blog Entries

- Contacts history for Xojo
- MBS Xojo Plugins, version 22.0pr7

48.9.4 Methods

48.9.5 additionalContactKeyDescriptors as CNKeyDescriptorMBS()

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Additional keys to include in the fetched contacts.

48.9.6 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Returns true on macOS 10.15 or iOS 13 or later.

48.9.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The constructor.

48.9.8 excludedTransactionAuthors as String()

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Exclude changes made by certain authors.
Notes: If set, transactions made by the specified authors will be excluded from the results. Use this, in conjunction with CNSaveRequest.transactionAuthor, to suppress processing of changes you already know about.

48.9.9 setAdditionalContactKeyDescriptors(additionalContactKeyDescriptors() as CNKeyDescriptorMBS)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Additional keys to include in the fetched contacts.
Notes:

By default, only CNContactIdentifierKey will be fetched. If you would like to include additional key descriptors to process the contacts, include the key descriptors you need.

CNContactIdentifierKey will always be fetched, whether you request it or not.

48.9.10 setExcludedTransactionAuthors(setExcludedTransactionAuthors() as String)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Exclude changes made by certain authors.
Notes: If set, transactions made by the specified authors will be excluded from the results. Use this, in conjunction with CNSaveRequest.transactionAuthor, to suppress processing of changes you already know about.

48.9.11 Properties

48.9.12 includeGroupChanges as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Set to true to also fetch group changes.
Notes:

Default is false.
(Read and Write property)

48.9.13 mutableObjects as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: To return mutable contacts and groups.
Notes:

If true returns mutable contacts and groups. Default is false.
(Read and Write property)

48.9.14 shouldUnifyResults as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Returns contact changes as unified contacts.
Notes:

If true, returns unified contact history. Otherwise returns individual contact history. Default is true.

A unified contact is the aggregation of properties from a set of linked individual contacts.
If an individual contact is not linked then the unified contact is simply that individual contact.
(Read and Write property)

48.9.15 startingToken as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Request changes made after a certain point.
Notes:

If non-nil, only changes made after this point in history will be returned.

If nil, a CNChangeHistoryDropEverythingEventMBS will be returned, followed by an add event for every contact and group currently in the contacts database.
(Read and Write property)

48.10 class CNChangeHistoryRemoveMemberFromGroupEventMBS

48.10.1 class CNChangeHistoryRemoveMemberFromGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A contact was removed from a group.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.10.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.10.3 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.10.4 Methods

48.10.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.10.6 Properties

48.10.7 group as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The group.
Notes: (Read only property)

48.10.8 member as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The member removed.
Notes: (Read only property)

48.11 class CNChangeHistoryRemoveSubgroupFromGroupEventMBS

48.11.1 class CNChangeHistoryRemoveSubgroupFromGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A subgroup was removed from a group.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.11.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.11.3 Blog Entries

48.11.4 Methods

48.11.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.11.6 Properties

48.11.7 group as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The group.
Notes: (Read only property)

48.11.8 subgroup as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The sub group.
Notes: (Read only property)

48.12 class CNChangeHistoryUpdateContactEventMBS

48.12.1 class CNChangeHistoryUpdateContactEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A contact was updated.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.12.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.12.3 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.12.4 Methods

48.12.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.12.6 Properties

48.12.7 contact as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The contact changed.
Notes: (Read only property)

48.13 class CNChangeHistoryUpdateGroupEventMBS

48.13.1 class CNChangeHistoryUpdateGroupEventMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A group was updated.
Notes:

Subclass of the CNChangeHistoryEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.13.2 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.13.3 Blog Entries

- MBS Xojo Plugins, version 22.0pr7

48.13.4 Methods

48.13.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.13.6 Properties

48.13.7 group as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The group used.
Notes: (Read only property)

48.14 class CNContactFetchRequestMBS

48.14.1 class CNContactFetchRequestMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A contact fetch request.
Notes: The CNContactFetchRequest class defines fetching options to use while fetching contacts. It is required to have contact property key(s) to fetch a contact's properties. Use this class with the enumerateContactsWithFetchRequest method to execute the contact fetch request.

48.14.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr5

48.14.3 Blog Entries

- MBS Xojo Plugins, version 18.4pr5

48.14.4 Methods

48.14.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.14.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The designated initializer for a fetch request that uses all keys.
Notes: Same as calling other Constructor and passing result of CNContactStoreMBS.AllFetchKeys function.
See also:

- 48.14.7 Constructor(keysToFetch() as CNKeyDescriptorMBS) 9705

48.14.7 Constructor(keysToFetch() as CNKeyDescriptorMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The designated initializer for a fetch request that uses the specified keys.
Notes: keysToFetch: An array of contact property keys and/or key descriptors from contacts objects to be fetched in the returned contacts.
See also:

- 48.14.6 Constructor 9705

48.14.8 keysToFetch as CNKeyDescriptorMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The properties to fetch in the returned contacts.
Notes: An array of contact property keys or key descriptors from contact objects to be fetched in the returned contacts. For example, CNContactEmailAddressesKey, CNContactPhoneNumbersKey, CNContactFormatterStyleFullName fetches the contact's email addresses, phone numbers, and contact's full name with the contact formatter.

48.14.9 setKeysToFetch(keysToFetch() as CNKeyDescriptorMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the properties to fetch in the returned contacts.

48.14.10 Properties

48.14.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNContactFetchRequest object.
(Read and Write property)

48.14.12 mutableObjects as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether to return mutable contacts.
Notes:

When the value of this property is true, the fetch returns CNMutableContact objects; otherwise it returns CNContact objects. The default value of this property is false.
(Read and Write property)

48.14.13 predicate as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The predicate to match contacts against.
Notes:

Set the value of this property to nil to match all contacts or use the predicates define in CNContact Predicates. Compound predicates are not supported.
(Read and Write property)

48.14.14 SortOrder as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The sort order for contacts.
Notes:

The default sort order is CNContactSortOrderNone.
(Read and Write property)

48.14.15 unifyResults as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether to return linked contacts as unified contacts.
Notes:

A unified contact is an aggregation of properties from a set of linked individual contacts. When the value of this property is true, the fetch returns unified contacts; otherwise, it returns individual contacts. The default value of this property is true.
(Read and Write property)

48.15 class CNContactFormatterMBS

48.15.1 class CNContactFormatterMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactFormatter class defines the different formatting styles for contacts.
Example:

```
dim m as new CNMutableContactMBS
m.givenName = "Bob"
m.familyName = "Miller"

dim f as new CNContactFormatterMBS
dim style as Integer = CNContactFormatterMBS.CNContactFormatterStyleFullName
MsgBox CNContactFormatterMBS.stringFromContact(m, style)
```

Notes: This class handles international ordering and delimiting for the contact name components. When formatting many contacts, create an instance of this class and use the instance methods; otherwise use the class methods.

48.15.2 Methods

48.15.3 attributedStringFromContact(contact as CNContactMBS, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Formats the contact name as an attributed string.
Notes:

contact: The contact whose name is to be formatted.
attributes: The default attributes to use. For more information, see NSFormatter.

Returns the formatted contact name as an attributed string.

This method behaves similarly to stringFromContact, except that it returns an attributed string. It includes the attribute key CNContactPropertyAttribute whose attribute values are contact property keys, such as CNContactGivenNameKey. This identifies the name components in the formatted contact name.
See also:

- 48.15.4 attributedStringFromContact(contact as CNContactMBS, Style as Integer, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS

48.15.4 attributedStringFromContact(contact as CNContactMBS, Style as Integer, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Formats the contact name as an attributed string.
Notes:

contact: The contact whose name is to be formatted.
style: The formatting style to be used for the contact name.
attributes: The default attributes to use. For more information, see NSFormatter.

Returns the formatted contact name as an attributed string.

This method behaves similarly to stringFromContact, except that it returns an attributed string. It includes the attribute key CNContactPropertyAttribute, whose attribute values are contact property keys, such as CNContactGivenNameKey. This identifies the name components in the formatted contact name.
See also:

- 48.15.3 attributedStringFromContact(contact as CNContactMBS, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS 9708

48.15.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.15.6 CNContactPropertyAttribute as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the attributes in the attribute dictionary.
Notes: If the attributes include the key CNContactPropertyAttribute whose attribute values are contact property keys, such as CNContactGivenNameKey. This identifies the name components in the formatted contact name.

48.15.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

48.15.8 delimiterForContact(contact as CNContactMBS) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the delimiter to use between name components.
Notes:

contact: The contact whose name is to be formatted.

Returns the delimiter to use between name components.

If contact is nil, or if it has no first name, middle name, or last name, this method returns an empty string.

48.15.9 descriptorForRequiredKeysForStyle(Style as Integer) as CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the required key descriptor for the specified formatting style of the contact.
Notes:

style: The formatting style to be used for contact name.

Returns the contact key descriptor for the formatting style.

Include this method with the keys to fetch when fetching contacts. To format multiple styles, you can include multiple key descriptors with the keys to fetch.

48.15.10 nameOrderForContact(contact as CNContactMBS) as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the display name order.
Notes:

contact: The contact whose name is to be formatted.

Returns the display order to use when combining the given name and family name components.

For more information about display name orders, see CNContactDisplayNameOrder.

48.15.11 stringFromContact(contact as CNContactMBS) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Formats the contact name.
See also:

- 48.15.12 stringFromContact(contact as CNContactMBS, Style as Integer) as String 9711

48.15.12 stringFromContact(contact as CNContactMBS, Style as Integer) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the contact name, formatted with the specified formatter.
Notes:

contact: The contact whose name is to be formatted.
style: The formatting style to be used for the contact name.
See also:

- 48.15.11 stringFromContact(contact as CNContactMBS) as String 9711

48.15.13 Properties

48.15.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNContactFormatter object.
(Read and Write property)

48.15.15 Style as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The formatting style for the contact name.
Notes:

The style for a contact formatter instance. The default value for this property is CNContactFormatterStyle-FullName. For more information on formatting styles, see CNContactFormatterStyle.
(Read and Write property)

48.15.16 Constants

48.15.17 CNContactDisplayNameOrderFamilyNameFirst = 2

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the formatting orders for contact names component.
Notes: Display name order by family name first.

48.15.18 CNContactDisplayNameOrderGivenNameFirst = 1

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the formatting orders for contact names component.
Notes: Display name order by given name first.

48.15.19 CNContactDisplayNameOrderUserDefault = 0

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the formatting orders for contact names component.
Notes: Display name order by user default.

48.15.20 CNContactFormatterStyleFullName = 0

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the formatting styles for contact names.
Notes: Combines the contact name components into a full name.

48.15.21 CNContactFormatterStylePhoneticFullName = 1

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the formatting styles for contact names.
Notes: Combines the contact phonetic name components into a phonetic full name.

48.16 class CNContactMBS

48.16.1 class CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a contact.
Notes:

The CNContact is a thread-safe class that represents an immutable value object for contact properties, such as the first name and phone numbers of a contact. CNContact is similar to a complex Foundation collection, in that it has a mutable subclass (CNMutableContact). Neither the CNContact nor CNMutableContact class maintain a reference to their data store. Every contact has a unique ID, which you obtain using the identifier property.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.16.2 Blog Entries

- CNContactPickerViewController for Xojo
- Contacts history for Xojo
- MBS Xojo Plugins, version 20.5pr1
- MBS Xojo Plugins, version 18.1pr2
- MBS Xojo Plugins, version 17.2pr5

48.16.3 Blog Entries

- CNContactPickerViewController for Xojo
- Contacts history for Xojo
- MBS Xojo Plugins, version 20.5pr1
- MBS Xojo Plugins, version 18.1pr2
- MBS Xojo Plugins, version 17.2pr5

48.16.4 Methods

48.16.5 areKeysAvailable(keyDescriptors() as CNKeyDescriptorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Determines whether all contact property values for the specified keys are fetched.
Notes: The isKeyAvailable or areKeysAvailable methods are used where you are not certain of the keys that

when fetched. If this method returns false, refetch the contact using the contact identifier and the keys you want to fetch. Accessing a property that was not fetched will throw an CNContactPropertyNotFetchedExceptionName exception.

48.16.6 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.16.7 CNContactBirthdayKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Birthday.

48.16.8 CNContactDatesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Contact dates.

48.16.9 CNContactDepartmentNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Department name.

48.16.10 CNContactEmailAddressesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Email address.

48.16.11 CNContactFamilyNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Family name.

48.16.12 CNContactGivenNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Given name.

48.16.13 CNContactIdentifierKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: The identifier.

48.16.14 CNContactImageDataAvailableKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes:

Image data availability.
Available in OS X 10.12 or newer.

48.16.15 CNContactImageDataKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Image data.

48.16.16 CNContactInstantMessageAddressesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Instant messages.

48.16.17 CNContactJobTitleKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Job title.

48.16.18 CNContactMiddleNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Middle name.

48.16.19 CNContactNamePrefixKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Name prefix.

48.16.20 CNContactNameSuffixKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Name suffix.

48.16.21 CNContactNicknameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Nickname.

48.16.22 CNContactNonGregorianBirthdayKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Non-Gregorian birthday.

48.16.23 CNContactNoteKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Note.

48.16.24 CNContactOrganizationNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Organization name.

48.16.25 CNContactPhoneNumbersKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Phone number.

48.16.26 CNContactPhoneticFamilyNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Phonetic family name.

48.16.27 CNContactPhoneticGivenNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Phonetic given name.

48.16.28 CNContactPhoneticMiddleNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Phonetic middle name.

48.16.29 CNContactPhoneticOrganizationNameKey as String

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic spelling of the contact's organization name.
Notes: Requires macOS 10.12 or newer.

48.16.30 CNContactPostalAddressesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Postal address.

48.16.31 CNContactPreviousFamilyNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Previous family name.

48.16.32 CNContactPropertyNotFetchedExceptionName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Exception thrown when an accessed property was not fetched.
Notes: The plugin throws a NSExceptionMBS where the name is this value in case a property is not available.

48.16.33 CNContactRelationsKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Contact relations.

48.16.34 CNContactSocialProfilesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Social profile.

48.16.35 CNContactThumbnailImageDataKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Thumbnail data.

48.16.36 CNContactTypeKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: Contact type.

48.16.37 CNContactUrlAddressesKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for contact properties.
Notes: URL Address.

48.16.38 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

48.16.39 contactRelations as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled relations for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNContactRelation value. This property was previously known as related names.

48.16.40 copy as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the contact object.

48.16.41 dates as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array containing labeled Gregorian dates.
Notes: This property is an array of CNLabeledValue objects, each of which has an NSString label and NSDateComponents value. You can use this property to store Gregorian dates such as anniversaries. Day and month components are required and year is optional. The calendar component can be nil or NSCalendarIdentifierGregorian. All other date components are invalid and including them results in an NSError object that includes the key paths of the invalid components and the error code CNErrorCodeValidationConfigurationError.

48.16.42 descriptorForAllComparatorKeys as CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches all the keys required for the contact sort comparator.
Notes: This method implements the CNKeyDescriptor protocol and can be used as an array element when fetching keys for contacts.

48.16.43 emailAddresses as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled email addresses for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and an NSString that contains the email address.

48.16.44 instantMessageAddresses as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled IM addresses for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNInstantMessageAddress value.

48.16.45 isKeyAvailable(key as String) as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Determines whether the contact property value for the specified key is fetched.
Notes: The isKeyAvailable or areKeysAvailable methods are used when you are not certain of the keys that were fetched. If this method returns false, refetch the contact using the contact identifier and the keys you want to fetch. Accessing a property that was not fetched will throw CNContactPropertyNotFetchedExceptionName.

48.16.46 isUnifiedWithContactWithIdentifier(contactIdentifier as String) as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if the receiver was fetched as a unified contact and includes the contact having contactIdentifier in its unification.

48.16.47 localizedStringForKey(key as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a string containing the localized contact property name.
Notes:

key: A string containing the contact property key.

Returns a localized string containing the contact property name.

This method returns a localized string for a contact property key. For example, the value of a Canadian CNContactPostalAddressesKey field would be "Postal Code", while the value of a French one would be "Code Postal".

48.16.48 mutableCopy as CNMutableContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of this contact.

48.16.49 phoneNumbers as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled phone numbers for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNPhoneNumber value.

48.16.50 postalAddresses as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled postal addresses for a contact.
Example:

```
Dim c As CNContactMBS // your contact

Dim postalAddresses() As CNLabeledValueMBS = c.postalAddresses
For Each postalAddresse As CNLabeledValueMBS In postalAddresses

Dim p As CNPostalAddressMBS = postalAddresse.Value

MsgBox p.Street + EndOfLine + p.PostalCode + " " + p.City
Next
```

Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNPostalAddress value.

48.16.51 predicateForContactsInContainerWithIdentifier(containerIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts in the specified container.
Notes: Returns a predicate that can be used to fetch contacts from CNContactStore.

48.16.52 predicateForContactsInGroupWithIdentifier(groupIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts that are members in the specified group.
Notes: Returns a predicate that can be used to fetch contacts from CNContactStore.

48.16.53 predicateForContactsMatchingEmailAddress(emailAddress as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts whose email address matches the specified value.
Example:

```
Dim keysToFetch() As CNKeyDescriptorMBS
keysToFetch.append CNContactVCardSerializationMBS.descriptorForRequiredKeys

Dim predicate As NSPredicateMBS = CNContactMBS.predicateForContactsMatchingEmailAddress("test@test.test")

Dim error As NSErrorMBS
Dim contacts() As CNContactMBS = m.unifiedContactsMatchingPredicate(predicate, keysToFetch, error)

If error <>Nil Then
List.AddRow "Error: "+error.LlocalizedDescription
Else
List.AddRow Str(contacts.Ubound+1)+" contacts found"
End If
```

Notes:

emailAddress: The email address to be matched.

Returns a predicate that you can use to fetch contacts from CNContactStoreMBS class.

Requires macOS 10.13 or newer.

48.16.54 predicateForContactsMatchingName(name as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts matching the specified name.
Example:

```
Dim keysToFetch() As CNKeyDescriptorMBS
keysToFetch.append CNContactVCardSerializationMBS.descriptorForRequiredKeys

Dim predicate As NSPredicateMBS = CNContactMBS.predicateForContactsMatchingName("Peter")

Dim error As NSErrorMBS
Dim contacts() As CNContactMBS = m.unifiedContactsMatchingPredicate(predicate, keysToFetch, error)

If error <>Nil Then
List.AddRow "Error: "+error.LocalizedDescription
Else
List.AddRow Str(contacts.Ubound+1)+" contacts found"
End If
```

Notes:

The name can contain any number of words.
Returns a predicate that can be used to fetch contacts from CNContactStore.

48.16.55 predicateForContactsMatchingPhoneNumber(phoneNumber as CNPhoneNumberMBS) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts whose phone number matches the specified value.
Example:

```
Dim keysToFetch() As CNKeyDescriptorMBS
keysToFetch.append CNContactVCardSerializationMBS.descriptorForRequiredKeys

Dim phone As New CNPhoneNumberMBS("123456789")
Dim predicate As NSPredicateMBS = CNContactMBS.predicateForContactsMatchingPhoneNumber(phone)
```

```
Dim error As NSErrorMBS
Dim contacts() As CNContactMBS = m.unifiedContactsMatchingPredicate(predicate, keysToFetch, error)

If error <>Nil Then
List.AddRow "Error: "+error.LocalizedDescription
Else
List.AddRow Str(contacts.Ubound+1)+" contacts found"
End If
```

Notes:

Returns a predicate that you can use to fetch contacts from CNContactStoreMBS.

Requires macOS 10.13 or newer.

48.16.56 predicateForContactsWithIdentifiers(Identifiers() as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the contacts matching the specified identifiers.
Notes: Returns a predicate that can be used to fetch contacts from CNContactStore.

48.16.57 socialProfiles as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled social profiles for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNSocialProfile value.

48.16.58 urlAddresses as CNLabeledValueMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of labeled URL addresses for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and an NSString value that contains the URL.

48.16.59 valueForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries value for a given key.
Example:

```
// your contact
dim c as CNContactMBS

dim value as Variant = c.valueForKey(c.CNContactPreviousFamilyNameKey)
if value = nil then
// empty
else
MsgBox value.StringValue
end if
```

Notes: Normally you use the properties, but if you loop over a list of keys, you can use this function to query value for key.

48.16.60 Properties

48.16.61 birthday as NSDateComponentsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A date component for the Gregorian birthday of the contact.
Notes:

Birthdays are represented by this property, whose values are the relevant properties of an NSDateComponents object. Day and month components are required for this property, and year is optional. The calendar component can be nil or NSCalendarIdentifierGregorian. All other date components are invalid and including them results in an NSError object that includes the key paths of the invalid components and the error code CNErrorCodeValidationConfigurationError.
(Read only property)

48.16.62 contactType as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An enum identifying the contact type.
Notes:

Can be CNContactMBS.CNContactTypeOrganization or CNContactMBS.CNContactTypePerson.

(Read only property)

48.16.63 departmentName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the department associated with the contact.
Notes: (Read only property)

48.16.64 familyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The family name of the contact.
Notes: (Read only property)

48.16.65 givenName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The given name of the contact.
Notes:

The given name is often known as the first name of the contact.
(Read only property)

48.16.66 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNContact object.
(Read and Write property)

48.16.67 identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A value that uniquely identifies a contact on the device.
Notes:

It is recommended that you use the identifier when re-fetching the contact. An identifier can be persisted between the app launches. Note that this identifier only uniquely identifies the contact on the current device.
(Read only property)

48.16.68 imageData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The profile picture of a contact.
Notes:

It is recommended that you fetch this property only when you need to access its value, such as when you need to display the contact's profile picture.
(Read only property)

48.16.69 imageDataAvailable as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Indicates whether a contact has a profile picture.
Notes: (Read only property)

48.16.70 jobTitle as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The contact's job title.
Notes: (Read only property)

48.16.71 middleName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The middle name of the contact.
Notes: (Read only property)

48.16.72 namePrefix as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name prefix of the contact.
Notes: (Read only property)

48.16.73 nameSuffix as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name suffix of the contact.
Notes: (Read only property)

48.16.74 nickname as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The nickname of the contact.
Notes: (Read only property)

48.16.75 nonGregorianBirthday as NSDateComponentsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A date component for the non-Gregorian birthday of the contact.
Notes:

Non-Gregorian birthdays can be displayed using this property, whose values are the relevant properties of an NSDateComponents object. Day and month components are required; year and leap month are optional. The calendar component is also required and must be an NSCalendar object with an identifier other than NSCalendarIdentifierGregorian. For example, some supported calendars are Chinese, Hebrew, and Islamic. All other date components are invalid and including them results in an NSError object that includes the key paths of the invalid components and the error code CNErrorCodeValidationConfigurationError.
(Read only property)

48.16.76 note as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A string containing notes for the contact.
Notes: (Read only property)

48.16.77 organizationName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the organization associated with the contact.
Notes: (Read only property)

48.16.78 phoneticFamilyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A string for the phonetic family name of the contact.
Notes:

This property contains a string that specifies the pronunciation of the contact's family (or last) name.
(Read only property)

48.16.79 phoneticGivenName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic given name of the contact.
Notes:

This property contains a string that specifies the pronunciation of the contact's given (or first) name.
(Read only property)

48.16.80 phoneticMiddleName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic middle name of the contact.
Notes:

This property contains a string that specifies the pronunciation of the contact's middle name.
(Read only property)

48.16.81 phoneticOrganizationName as String

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic name of the organization associated with the contact.
Notes:

This property contains a string that specifies the pronunciation of the contact's organization name.
Requires macOS 10.12 or newer.
(Read only property)

48.16.82 previousFamilyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A string for the previous family name of the contact.
Notes:

The previous family name is often known as the maiden name of the contact.
(Read only property)

48.16.83 thumbnailImageData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The thumbnail version of the contact's profile picture.
Notes:

The thumbnailImageData property is derived from the imageData property, including cropping information from vCards or edits from contact viewing. It is recommended that you fetch this property only when you need to access its value, such as when you need to display the contact's profile thumbnail picture.
(Read only property)

48.16.84 Constants

48.16.85 CNContactSortOrderFamilyName = 3

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the sort order constants.
Notes: Order by Family Name.

48.16.86 CNContactSortOrderGivenName = 2

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the sort order constants.
Notes: Order by Given Name.

48.16.87 CNContactSortOrderNone = 0

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the sort order constants.
Notes: Order by no order.

48.16.88 CNContactSortOrderUserDefault = 1

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the sort order constants.
Notes: Order by user preference.

48.16.89 CNContactTypeOrganization = 1

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the contact types.
Notes: The contact is an Organization.

48.16.90 CNContactTypePerson = 0

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the contact types.
Notes: The contact is a person.

48.17 class CNContactPickerMBS

48.17.1 class CNContactPickerMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The CNContactPicker object displays the popover-based system interface for selecting a contact.
Notes: The methods and properties of this class help you choose a contact or a contact's value, such as a phone number or email address, of a contact.

48.17.2 Methods

48.17.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.17.4 close

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Closes the popover.

48.17.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

48.17.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

48.17.7 displayedKeys as String()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The keys to be displayed when a contact is expanded.
Notes: If no keys are provided, the picker selects contacts instead of values. For a list of possible keys, see Metadata Keys in CNContact.

48.17.8 setDisplayedKeys(keys() as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Set the keys to be displayed when a contact is expanded.
Notes: If no keys are provided, the picker selects contacts instead of values. For a list of possible keys, see Metadata Keys in CNContact.

48.17.9 showRelativeToRect(positioningRect as NSRectMBS, view as NSViewMBS, edge as Integer)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Shows the picker popover anchored to the specified view.
Notes:

positioningRect: The content size of the popover.
positioningView: The view to which the popover should be positioned.
preferredEdge: The edge to which the popover should be anchored to. Can be MinYEdge, MinXEdge, MaxYEdge or MaxXEdge.

48.17.10 Properties

48.17.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes:

Value is a pointer to a CNContactPicker object.
(Read and Write property)

48.17.12 Events

48.17.13 DidClose

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: .

Function: Called when the contact picker's popover has closed.

48.17.14 didSelectContact(contact as CNContactMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: .

Function: Called after a contact has been selected by the user.
Notes: The contact may only be partial loaded and not have all fields available as the picker may not need/show all fields.

48.17.15 didSelectContactProperty(contactProperty as CNContactPropertyMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: .

Function: The event called when a contact property was selected.
Notes: The contact may only be partial loaded and not have all fields available as the picker may not need/show all fields.

48.17.16 WillClose

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: .

Function: Called when the contact picker's popover is about to close.

48.17.17 Constants

48.17.18 MaxXEdge = 2

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the edge constants.

48.17.19 MaxYEdge = 3

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the edge constants.

48.17.20 MinXEdge = 0

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the edge constants.

48.17.21 MinYEdge = 1

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the edge constants.

48.18 class CNContactPickerViewControllerMBS

48.18.1 class CNContactPickerViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: A view controller that displays an interface for picking contacts.
Notes:

A CNContactPickerViewController allows the user to select one or more contacts (or their properties) from the list of contacts displayed in the contact view controller (CNContactViewController). The picker supports both single selection and multiselection of the contacts. The app using contact picker view does not need access to the user's contacts and the user will not be prompted for "grant permission" access. The app has access only to the user's final selection.
There are predefined predicates in this class that let you control the user selection of the contact. Changing the predicates only take effect before the view is presented.
Subclass of the NSViewControllerMBS class.

48.18.2 Blog Entries

- CNContactPickerViewController for Xojo
- MBS Xojo Plugins, version 22.3pr2

48.18.3 Blog Entries

- CNContactPickerViewController for Xojo

48.18.4 Methods

48.18.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Whether this class is available.
Notes: Requires iOS 9.0

48.18.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: The constructor.

48.18.7 Destructor

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: The destructor.

48.18.8 Dismiss

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Dismisses the controller.

48.18.9 displayedPropertyKeys as String()

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: The CNContact property keys to display in the contact detail card.
Notes: All the properties of the contact are displayed if this property is not set.

48.18.10 Present

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Presents the controller.

48.18.11 setdisplayedPropertyKeys(displayedPropertyKeys() as String)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: The CNContact property keys to display in the contact detail card.
Notes: All the properties of the contact are displayed if this property is not set.

48.18.12 Properties

48.18.13 isBeingPresented as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: Whether the controller is presented.
Notes:

Returns true if the dialog is visible.
(Read only property)

48.18.14 predicateForEnablingContact as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: A predicate to determine the contact selectability in the list of contacts.
Notes:

You can set a value for this property to determine which contact should become selectable, such as emailAddresses.@count >0 to enable all the contacts that have an email address to become selectable. If no predicate is set for this property, all contacts become selectable. To learn about predicate syntax, see NSPredicateMBS.
(Read and Write property)

48.18.15 predicateForSelectionOfContact as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: A predicate to control the return of the selected contact.
Notes:

This property determines whether a selected contact should be returned (when the predicate evaluates to TRUE), or a default action for the property should be performed (when the predicate evaluates to FALSE). By default the contact picker view controller displays the contact's detail card when a contact is selected. To learn about predicates, see NSPredicateMBS.
(Read and Write property)

48.18.16 predicateForSelectionOfProperty as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

Function: A predicate to control the properties of the selected contact.
Notes:

This property determines whether a selected contact should be returned (when the predicate evaluates to TRUE), or a default action for the property should be performed (when the predicate evaluates to FALSE). By default the contact picker view controller returns the first selected property of the contact. This predicate is evaluated on the CNContactProperty property that is being selected, such as (key == 'emailAddresses') AND (value LIKE '*@apple.com') to return email address of the contact if the address contains the string "@apple.com".
(Read and Write property)

48.18.17 Events

48.18.18 didCancel

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: .

Function: In iOS, called when the user taps Cancel.
Notes: The picker is dismissed automatically after a contact or property is picked.

48.18.19 didSelectContact(contact as CNContactMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: .

Function: Called after a contact has been selected by the user.
Notes: This event is called when the user selects a single contact.

48.18.20 didSelectContactProperties(contactProperties() as CNContactPropertyMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: .

Function: Called after contact properties have been selected by the user.
Notes: This event is invoked when the user selects more than one property. Implementing this method configures the picker for multi-selection.

48.18.21 didSelectContactProperty(contactProperty as CNContactPropertyMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: .

Function: Called when a property of the contact has been selected by the user.
Notes: This event ia called when the user selects a single property of the contact.

48.18.22 didSelectContacts(contacts() as CNContactMBS)

MBS Mac64bit Plugin, Plugin Version: 22.3, Platform: iOS, Targets: .

Function: Called after contacts have been selected by the user.
Notes: This event is called when the user selects more than one contact. Implementing this method configures the picker for multi-selection.

48.19 class CNContactPropertyMBS

48.19.1 class CNContactPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactProperty is a convenience class and returns a tuple or quadruple to a contact's property.
Notes: A property contains related information for a specific contact. A contact (an instance of CNContact) has properties, such as firstName, phoneNumber, and jobTitle. Each property is represented by an instance of CNContactProperty, which provides a tuple that can contain three or five values, depending on whether the property is a member of an array of labeled values. For example, the phoneNumbers property is a member of an array of labeled values, so the CNContactProperty tuple contains the contact, key, value, identifier, and label. For the givenName property, which is not contained in a labeled array, CNContactProperty returns a tuple that contains the contact, key, and value. The CNContactProperty class is used by the CNContactPicker to return the user's selected property.

48.19.2 Methods

48.19.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

48.19.5 copy as CNContactPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the social property object.

48.19.6 Properties

48.19.7 Contact as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: CNContact property of the selected contact.
Notes:

This property is used for properties that may or may not be in labeled arrays.
(Read only property)

48.19.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNContactProperty object.
(Read and Write property)

48.19.9 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The identifier of the labeled value in the array of labeled.
Notes:

Identifier is used only for properties in labeled arrays. If the property is not an array of labeled values, the value of the identifier is "".
(Read only property)

48.19.10 Key as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The key of the contact property.
Notes:

This property is used for properties that may or may not be in labeled arrays.
(Read only property)

48.19.11 Label as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The label of the labeled value of the property array.
Notes:

Labeled property is used only for properties that are in labeled arrays. If the property is not an array of labeled values, the value of the label is "".
(Read only property)

48.19.12 Value as Variant

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The value of the property.
Notes:

This property is used for properties that may or may not be in labeled arrays.
(Read only property)

48.20 class CNContactRelationMBS

48.20.1 class CNContactRelationMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactRelation class defines an immutable value object representing a contact related to another.
Notes: This is a thread-safe class.

48.20.2 Methods

48.20.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.20.4 CNLabelContactRelationAssistant as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Assistant.

48.20.5 CNLabelContactRelationBrother as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Brother

48.20.6 CNLabelContactRelationChild as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Child

48.20.7 CNLabelContactRelationDaughter as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes:

Daugther
for macOS 10.13 or newer.

48.20.8 CNLabelContactRelationFather as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Father

48.20.9 CNLabelContactRelationFriend as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Friend

48.20.10 CNLabelContactRelationManager as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Manager

48.20.11 CNLabelContactRelationMother as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Mother

48.20.12 CNLabelContactRelationParent as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Parent

48.20.13 CNLabelContactRelationPartner as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Partner

48.20.14 CNLabelContactRelationSister as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Sister

48.20.15 CNLabelContactRelationSon as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes:

Son
for macOS 10.13 or newer.

48.20.16 CNLabelContactRelationSpouse as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the relation values.
Notes: Spouse

48.20.17 Constructor(name as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Initialize a class instance with the name of the related contact.

48.20.18 contactRelationWithName(name as string) as CNContactRelationMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new contact relation with a name.

48.20.19 copy as CNContactRelationMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the contact relation object.

48.20.20 Properties

48.20.21 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNContactRelation object.
(Read and Write property)

48.20.22 Name as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the related contact.
Notes: (Read only property)

48.21 class CNContactStoreMBS

48.21.1 class CNContactStoreMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactStore class is a thread-safe class that can fetch and save contacts, groups, and containers.
Notes:

The CNContactStore class provides ways to execute fetch and save requests. There are a few recommended ways you can implement these requests in your app to load contacts:

- Fetch only the contact properties that will be used.
- When fetching all contacts and caching the results, first fetch all contacts identifiers, then fetch batches of detailed contacts by identifiers as required.
- To aggregate several contacts fetches, first collect a set of unique identifiers from the fetches. Then fetch batches of detailed contacts by those unique identifiers.
- If you cache the fetched contacts, groups, or containers, you need to refetch these objects (and release the old cached objects) when CNContactStoreDidChangeNotification is posted.

Because CNContactStore fetch methods perform I/O, it's recommended that you avoid using the main thread to execute fetches.

Your app must be code signed to see contacts.

Warning: Do not use in macOS 10.11 or earlier due to bugs, which have been fixed in macOS 10.12.

48.21.4 Methods

48.21.5 allContacts(byref error as NSErrorMBS) as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Searches all contacts.
Notes: Same as ContactsWithFetchRequest function with key list from CNContactStoreMBS.AllFetchKeys function.

48.21.6 AllFetchKeys as String()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Returns list of all keys used by the plugin to query all properties for contacts.

48.21.7 authorizationStatusForEntityType(entityType as Integer = 0) as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the current authorization status to access the contact data.
Notes:

entityType: Set to CNEntityType, e.g. CNEntityTypeContacts.

Returns the current authorization status to access the contact data.

Based on the authorization status, your application might display or hide its UI elements that access any Contacts API. This method is thread-safe and will not block your application. To see different authorization status, see CNAuthorizationStatus.

48.21.8 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.21.9 CNContactStoreDidChangeNotification as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The notification posted when changes occur in another CNContactStore.

48.21.10 CNErrorDomain as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The error domain for NSErrorMBS.

48.21.11 CNErrorUserInfoAffectedRecordIdentifiersKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A key for the NSError userInfo dictionary.
Notes: When available an array of one or more NSString objects for which the error code applies.

48.21.12 CNErrorUserInfoAffectedRecordsKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A key for the NSError userInfo dictionary.
Notes: When available an array of one or more CNContact, CNGroup or CNContainer objects for which the error code applies.

48.21.13 CNErrorUserInfoKeyPathsKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A key for the NSError userInfo dictionary.
Notes: An array of key paths associated with a given error. For validation errors this will contain key paths

to specific object properties.

48.21.14 CNErrorUserInfoValidationErrorsKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A key for the NSError userInfo dictionary.
Notes: An array of NSErrors for CNErrorCodeValidationMultipleErrors.

48.21.15 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

48.21.16 ContactsWithFetchRequest(fetchRequest as CNContactFetchRequestMBS, byref error as NSErrorMBS) as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns all contacts matching a contact fetch request.
Notes:

fetchRequest: The contact fetch request that specifies the search criteria.
error: Error information, if an error occurred.

This method waits until the enumeration is finished. If there are no results, the method returns an empty array.
This can be used to fetch all contacts without keeping all of them at once in memory because this is expensive.

Your app must be code signed to see contacts.

48.21.17 containersMatchingPredicate(predicate as NSPredicateMBS, byref error as NSErrorMBS) as CNContainerMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches all containers matching the specified predicate.
Notes:

predicate: The predicate to use to fetch matching containers. Set this property to nil to match all containers.
error: Error information, if an error occurred.

Returns an array of CNContainer objects that match the predicate.

A container holds a collection of contacts, a contact (each contact can be in only one container). CardDAV accounts usually have only one container of contacts. Exchange accounts may have multiple containers, where each container represents an Exchange folder.

This method returns an empty array when no matching container is found. In case of an error this method returns nil. You should use only the predicates defined CNContainer class. Compound predicates are not supported.

48.21.18 defaultContainerIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the identifier of the default container.
Notes: This identifier can be used to fetch a default container. A default container is where the user wants new contacts to be added implicitly.

48.21.19 Destructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

48.21.20 enumerateContactsWithFetchRequest(fetchRequest as CNContactFetchRequestMBS, byref error as NSErrorMBS, tag as Variant = nil) as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value that indicates whether the enumeration of all contacts matching a contact fetch request executed successfully.
Notes:

fetchRequest: The contact fetch request that specifies the search criteria.
error: Error information, if an error occurred.

Calls enumerateContactsWithFetchRequest event for each contact found.

Returns true if enumeration of all contacts matching a contact fetch request executes successfully; otherwise, false.

This method waits until the enumeration is finished. If there are no results, the event is not called and the method returns true.

This can be used to fetch all contacts without keeping all of them at once in memory because this is expensive.
See also:

- 48.21.39 enumerateContactsWithFetchRequest(contact as CNContactMBS, byref stop as boolean, tag as Variant) 9761

48.21.21 enumeratorForChangeHistoryFetchRequest(request as CNChangeHistoryFetchRequestMBS, byref error as NSErrorMBS) as CNFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop & iOS.

Function: Enumerate a change history fetch request.
Notes:

Executes the given fetch request and returns an enumerator for the results.
This may prevent all events from being loaded into memory at once.

An exception may be thrown if an error occurs during enumeration.

request: A description of the events to fetch.
error: If the fetch fails, contains an NSErrorMBS object with more information.

Returns an enumerator of the events matching the result, or nil if there was an error.

48.21.22 enumeratorForContactFetchRequest(request as CNContactFetchRequestMBS, byref error as NSErrorMBS) as CNFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop & iOS.

Function: Enumerate a contact fetch request.
Notes:

Executes the given fetch request and returns an enumerator for the results.

This may prevent all records from being loaded into memory at once.

An exception may be thrown if an error occurs during enumeration.

request: A description of the records to fetch.
error: If the fetch fails, contains an NSErrorMBS object with more information.

An enumerator of the records matching the result, or nil if there was an error.

48.21.23 executeSaveRequest(saveRequest as CNSaveRequestMBS, byref Error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Executes a save request and returns success or failure.
Notes:

saveRequest: The save request to execute.
error: Error information, if an error occurred.

Returns true if the save request executes successfully; otherwise, false.

It is recommended that you do not access objects in the save request from other threads when it is in the process of being executed, because it may modify the contacts in the process. A save request only applies the changes to the objects. If there are overlapping changes with multiple or concurrent CNSaveRequest then the last saved change wins.

Warning: Do not use in macOS 10.11 or earlier due to bugs, which have been fixed in macOS 10.12.

48.21.24 groupsByName(name as String, byref error as NSErrorMBS) as CNGroupMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Looks for groups with matching names.
Notes:

Returns empty array if nothing found.
Comparison is localized case insensitive.

48.21.25 groupsForContact(contact as CNContactMBS, byref error as NSErrorMBS) as CNGroupMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Searches all groups for a given contact.

48.21.26 groupsMatchingPredicate(predicate as NSPredicateMBS, byref error as NSErrorMBS) as CNGroupMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches all groups matching the specified predicate.
Notes:

predicate: The predicate to use to fetch the matching groups. Set predicate to nil to match all groups.
error: Error information, if an error occurred.

Returns an array of CNGroup objects that match the predicate.

This method returns an empty array when no matching groups are found. If an error occurs, this method returns nil. You should use only the predicates defined in CNGroup class predicates. Compound predicates are not supported. Contacts may be members of one or more groups, depending upon the account they come from.

48.21.27 requestAccessForEntityType(entityType as Integer = 0, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Requests access to the user's contacts.
Notes:

entityType: Set to CNEntityTypeContacts.

Users are able to grant or deny access to contact data on a per-application basis. Request access to contact data by calling requestAccessForEntityType method. This will not block your application while the user is being asked for permission. The user will only be prompted the first time access is requested; any subsequent CNContactStore calls will use the existing permissions. The requestAccessForEntityType event is later called. This method is optional when CNContactStore is used in the background thread. If this method is not used, CNContactStore may block your application while the user is asked for access permission.

Your app must be code signed to see contacts.

- 48.21.40 requestAccessForEntityType(granted as boolean, error as NSErrorMBS, tag as Variant) 9762

48.21.28 unifiedContactsMatchingPredicate(predicate as NSPredicateMBS, byref error as NSErrorMBS) as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches all unified contacts matching the specified predicate.
Notes:

predicate: The predicate to match against.
error: Error information, if an error occurred.

Returns an array of CNContact objects matching the predicate.

If no matches are found, this method returns an empty array (or nil in case of error). Use only the predicates from the CNContact class predicates. Compound predicates are not supported by this method. Due to unification, the returned contacts may have different identifiers than you specify. To fetch all contacts, use enumerateContactsWithFetchRequest.

Same as other unifiedContactsMatchingPredicate function with key list from CNContactStoreMBS.AllFetchKeys function.
See also:

- 48.21.29 unifiedContactsMatchingPredicate(predicate as NSPredicateMBS, keysToFetch() as CNKeyDescriptorMBS, byref error as NSErrorMBS) as CNContactMBS() 9758

48.21.29 unifiedContactsMatchingPredicate(predicate as NSPredicateMBS, keysToFetch() as CNKeyDescriptorMBS, byref error as NSErrorMBS) as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches all unified contacts matching the specified predicate.
Notes:

predicate: The predicate to match against.
keys: The properties to fetch in the returned CNContact objects. You should fetch only the properties that you plan to use. Note that you can combine contact keys and contact key descriptors.
error: Error information, if an error occurred.

Returns an array of CNContact objects matching the predicate.

If no matches are found, this method returns an empty array (or nil in case of error). Use only the predicates from the CNContact class predicates. Compound predicates are not supported by this method. Due to unification, the returned contacts may have different identifiers than you specify. To fetch all contacts, use enumerateContactsWithFetchRequest.
See also:

- 48.21.28 unifiedContactsMatchingPredicate(predicate as NSPredicateMBS, byref error as NSErrorMBS) as CNContactMBS() 9758

48.21.30 unifiedContactWithIdentifier(identifier as string, byref error as NSErrorMBS) as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches a unified contact for the specified contact identifier.
Notes:

identifier: The identifier of the contact to fetch.
error: Error information, if an error occurred.

Returns an unified contact matching or linked to the identifier.

Due to unification, the returned contact may have a different identifier, than you specify. To fetch a batch of contacts by identifiers use predicateForContactsWithIdentifiers with unifiedContactsMatchingPredicate. It is recommended to fetch only the properties that will be used. You can combine contact keys and contact key descriptors together.

Same as other unifiedContactWithIdentifier function with key list from CNContactStoreMBS.AllFetchKeys function.
See also:

- 48.21.31 unifiedContactWithIdentifier(identifier as string, keys() as CNKeyDescriptorMBS, byref error as NSErrorMBS) as CNContactMBS 9759

48.21.31 unifiedContactWithIdentifier(identifier as string, keys() as CNKeyDescriptorMBS, byref error as NSErrorMBS) as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Fetches a unified contact for the specified contact identifier.
Notes:

identifier: The identifier of the contact to fetch.
keys: The properties to fetch in the returned CNContact object.

error: Error information, if an error occurred.

Returns an unified contact matching or linked to the identifier.

Due to unification, the returned contact may have a different identifier, than you specify. To fetch a batch of contacts by identifiers use predicateForContactsWithIdentifiers with unifiedContactsMatchingPredicate. It is recommended to fetch only the properties that will be used. You can combine contact keys and contact key descriptors together.
See also:

- 48.21.30 unifiedContactWithIdentifier(identifier as string, byref error as NSErrorMBS) as CNContactMBS 9759

48.21.32 unifiedMeContact(byref error as NSErrorMBS) as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop only.

Function: Queries an unified contact for the user.
Example:

```
dim ContactStore as CNContactStoreMBS // your store
Dim error As NSErrorMBS
Dim contact As CNContactMBS = ContactStore.unifiedMeContact(Error)

If contact <>nil then
MsgBox contact.familyName
Else
MsgBox "No contact?"
End If
```

Notes: Same as unifiedMeContactWithKeysToFetch function with key list from CNContactStoreMBS.AllFetchKeys function.

48.21.33 unifiedMeContactWithKeysToFetch(keys() as CNKeyDescriptorMBS, byref error as NSErrorMBS) as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Queries an unified contact for the user.

48.21.34 Properties

48.21.35 currentHistoryToken as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieve the current history token.
Notes:

If you are fetching contacts or change history events, you should use the token on the CNFetchResultMBS class instead.
(Read only property)

48.21.36 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNContactStore object.
(Read and Write property)

48.21.37 Events

48.21.38 DidChange

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: .

Function: The event posted when changes occur in another CNContactStore.

48.21.39 enumerateContactsWithFetchRequest(contact as CNContactMBS, byref stop as boolean, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: .

Function: The event called by enumerateContactsWithFetchRequest for each new contact found.
See also:

- 48.21.20 enumerateContactsWithFetchRequest(fetchRequest as CNContactFetchRequestMBS, byref error as NSErrorMBS, tag as Variant = nil) as Boolean 9754

48.21.40 requestAccessForEntityType(granted as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: .

Function: The request for access completed.
Notes: Set granted to true if the user allows access and error is nil.
See also:

- 48.21.27 requestAccessForEntityType(entityType as Integer = 0, tag as Variant = nil) 9757

48.21.41 Constants

48.21.42 CNAuthorizationStatusAuthorized = 3

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the authorization status values the user can grant for an app to access the specified entity type.
Notes: The application is authorized to access contact data.

48.21.43 CNAuthorizationStatusDenied = 2

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the authorization status values the user can grant for an app to access the specified entity type.
Notes: The user explicitly denied access to contact data for the application.

48.21.44 CNAuthorizationStatusNotDetermined = 0

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the authorization status values the user can grant for an app to access the specified entity type.
Notes: The user has not yet made a choice regarding whether the application may access contact data.

48.21.45 CNAuthorizationStatusRestricted = 1

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the authorization status values the user can grant for an app to access the specified entity type.
Notes: The application is not authorized to access contact data. The user cannot change this application's status, possibly due to active restrictions such as parental controls being in place.

48.21.46 CNEntityTypeContacts = 0

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the contact types.
Notes: Contacts

48.21.47 CNErrorCodeAuthorizationDenied = 100

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Authentication denied error.

48.21.48 CNErrorCodeCommunicationError = 1

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Communication error.

48.21.49 CNErrorCodeContainmentCycle = 202

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Code containment cycle error.

48.21.50 CNErrorCodeContainmentScope = 203

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Code containment scope error.

48.21.51 CNErrorCodeDataAccessError = 2

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Data access error.

48.21.52 CNErrorCodeInsertedRecordAlreadyExists = 201

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Record already exists.

48.21.53 CNErrorCodeParentRecordDoesNotExist = 204

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: The contact does not exist error.

48.21.54 CNErrorCodePolicyViolation = 500

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Policy validation error.

48.21.55 CNErrorCodePredicateInvalid = 400

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Invalid predicate error.

48.21.56 CNErrorCodeRecordDoesNotExist = 200

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Record not found.

48.21.57 CNErrorCodeRecordIdentifierInvalid = 205

MBS Mac64bit Plugin, Plugin Version: 18.4.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Record identifier not valid.

48.21.58 CNErrorCodeValidationConfigurationError = 302

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Configuration validation error.

48.21.59 CNErrorCodeValidationMultipleErrors = 300

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Multiple validation error.

48.21.60 CNErrorCodeValidationTypeMismatch = 301

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the error codes that may be returned when calling Contacts methods.
Notes: Type mismatch validation error.

48.22 class CNContactsUserDefaultsMBS

48.22.1 class CNContactsUserDefaultsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactsUserDefaults class defines properties used to access the user defaults for a contact.

48.22.2 Methods

48.22.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.22.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

48.22.5 sharedDefaults as CNContactsUserDefaultsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The singleton instance of the CNContactsUserDefaults class.

48.22.6 Properties

48.22.7 countryCode as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An ISO country code.
Notes:

ISO is the default country code for phone numbers. This is determined by the device's SIM card or the operating system's configured language.

(Read only property)

48.22.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNContactsUserDefaults object.
(Read and Write property)

48.22.9 sortOrder as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Default sorting order by name.
Notes:

Sort order is determined by the operating system's configured language or overridden by the user.
(Read only property)

48.23 class CNContactVCardSerializationMBS

48.23.1 class CNContactVCardSerializationMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactVCardSerialization supports vCard representation for the given set of contacts.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.23.2 Methods

48.23.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.23.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

48.23.5 contactsWithData(Data as MemoryBlock, byref error as NSErrorMBS) as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the contacts from the vCard data.

48.23.6 dataWithContacts(Contacts() as CNContactMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the vCard representation of the specified contacts.

48.23.7 descriptorForRequiredKeys as CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Use to fetch all contact keys required to create vCard data from a contact.
Notes: A key descriptor to be used in the keysToFetch array when fetching the contacts.

48.24 class CNContactViewControllerMBS

48.24.1 class CNContactViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContactViewController class implements the view to display a contact.
Notes:

CNContactViewController can display a new contact, unknown contact, or existing contact.
Subclass of the NSViewControllerMBS class.

48.24.2 Blog Entries

- MBS Xojo Plugins, version 17.5pr3

48.24.3 Blog Entries

- MBS Xojo Plugins, version 17.5pr3

48.24.4 Methods

48.24.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.24.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

48.24.7 descriptorForRequiredKeys as CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Descriptor for all keys that must be fetched on a contact before setting it on the view controller.
Notes: Pass this descriptor to the keysToFetch of the CNContactFetchRequest if you want to display the

contact in a CNContactViewController.

48.24.8 Properties

48.24.9 Contact as CNContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A contact to display.
Notes:

When contact is nil, displays an empty selection state.
(Read and Write property)

48.25 class CNContainerMBS

48.25.1 class CNContainerMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNContainer class is a thread-safe class that defines an immutable object that represents a container.
Notes:

A container has a collection of contacts. A contact can be in only one container. CardDAV accounts usually have only one container whereas Exchange accounts may have multiple containers, where each container represents an Exchange folder
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.25.2 Methods

48.25.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.25.4 CNContainerIdentifierKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined keys representing container properties that can be used with key value coding on CNContainer objects.
Notes:

Identifier key.
This key represents the container identifier property for KVC/KVO usage. This property is always fetched.

48.25.5 CNContainerNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined keys representing container properties that can be used with key value coding on CNContainer objects.
Notes:

Name key.
This key represents the container identifier property for KVC/KVO usage. This property is always fetched.

48.25.6 CNContainerTypeKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined keys representing container properties that can be used with key value coding on CNContainer objects.
Notes:

Type key.
This key represents the container identifier property for KVC/KVO usage. This property is always fetched.

48.25.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private container.

48.25.8 copy as CNContainerMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the container object.

48.25.9 predicateForContainerOfContactWithIdentifier(contactIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the container of the specified contact.
Notes: If the identifier is for a unified contact then this method returns an empty array. To fetch the containers of a unified contact, first fetch the linked contacts and then fetch the container of each linked contact.

48.25.10 predicateForContainerOfGroupWithIdentifier(groupIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the container of the specified group.

48.25.11 predicateForContainersWithIdentifiers(Identifiers() as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find the containers with the specified identifiers.

48.25.12 Properties

48.25.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNContainer object.
(Read and Write property)

48.25.14 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The unique identifier for a contacts container on the device.
Notes:

It is recommended that you use the identifier when re-fetching the container. The identifier can be persisted between app launches.
(Read only property)

48.25.15 Name as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the container.
Notes: (Read only property)

48.25.16 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the container.
Notes:

can be CNContainerTypeUnassigned, CNContainerTypeLocal, CNContainerTypeExchange or CNContainerTypeCardDAV.
(Read only property)

48.25.17 Constants

48.25.18 CNContainerTypeCardDAV = 3

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the container type constants.
Notes: A container for contacts stored in an CardDAV server, such as iCloud.

48.25.19 CNContainerTypeExchange = 2

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the container type constants.
Notes: A container for contacts stored in an Exchange folder from an Exchange server.

48.25.20 CNContainerTypeLocal = 1

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the container type constants.
Notes: A container for contacts only stored locally on the device. There is only one local container for a device.

48.25.21 CNContainerTypeUnassigned = 0

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the container type constants.

48.26 class CNFetchResultMBS

48.26.1 class CNFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The class for a fetch result with a time stamp.
Notes:

Allows you to query contacts and changes with checking again later with new time.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.26.2 Blog Entries

- Contacts history for Xojo

48.26.3 Blog Entries

- Contacts history for Xojo

48.26.4 Methods

48.26.5 ChangeHistoryEvents as CNChangeHistoryEventMBS()

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The history events.

48.26.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.

48.26.7 Contacts as CNContactMBS()

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The contacts found.

48.26.8 Destructor

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The destructor.

48.26.9 Properties

48.26.10 currentHistoryToken as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The current history token.
Notes:

Retrieve the current history token. If you are fetching contacts or change history events, you should use the token on the CNFetchResultMBS class instead.
(Read only property)

48.27 class CNGroupMBS

48.27.1 class CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNGroup is a thread-safe class that defines an immutable object that represents a group.
Notes:

Contacts may be members of one or more groups, depending upon their accounts.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.27.2 Blog Entries

- MBS Xojo Plugins, version 17.2pr5

48.27.3 Blog Entries

- MBS Xojo Plugins, version 17.2pr5

48.27.4 Methods

48.27.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.27.6 CNGroupIdentifierKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined keys representing group properties that can be used with key value coding on CNGroup objects.
Notes:

Group identifier.
This key takes a string value.

48.27.7 CNGroupNameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined keys representing group properties that can be used with key value coding on CNGroup objects.
Notes:

Group name.
This key takes a string value.

48.27.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

48.27.9 copy as CNGroupMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the group object.

48.27.10 mutableCopy as CNMutableGroupMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of this group.

48.27.11 predicateForGroupsInContainerWithIdentifier(groupIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find groups in the specified container.
Notes:

containerIdentifier: The container identifier to be matched.

Returns a predicate that can be used to fetch groups from CNContactStore.

48.27.12 predicateForGroupsWithIdentifiers(Identifiers() as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a predicate to find groups with the specified identifiers.
Notes:

identifiers: The group identifiers to be matched.

Returns a predicate that can be used to fetch groups from CNContactStore.

48.27.13 predicateForSubgroupsInGroupWithIdentifier(contactIdentifier as String) as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a predicate to find all subgroups for a group.

48.27.14 valueForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries value for a given key.

48.27.15 Properties

48.27.16 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNGroup object.
(Read and Write property)

48.27.17 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The unique identifier for a group on the device.
Notes:

It is recommended that you use the identifier when re-fetching the group. The identifier can be persisted between app launches.
(Read only property)

48.27.18 Name as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the group.
Notes: (Read only property)

48.28 class CNInstantMessageAddressMBS

48.28.1 class CNInstantMessageAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNInstantMessageAddress class is a thread-safe class that defines an immutable value object representing an instant message address.
Notes: Use the methods and properties of this class to identify instant messaging address. Some instant message services, such as Facebook and Skype are predefined in this class. You can also specify your own instant message service using Constructor.

48.28.2 Methods

48.28.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.28.4 CNInstantMessageAddressServiceKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Instant message address service key.
Notes: This key takes a string value.

48.28.5 CNInstantMessageAddressUsernameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Instant message address user name key.
Notes: This key takes a string value.

48.28.6 CNInstantMessageServiceAIM as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes:

Instant message service for AIM.
This key takes a string value.

48.28.7 CNInstantMessageServiceFacebook as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes:

Instant message service for Facebook.
This key takes a string value.

48.28.8 CNInstantMessageServiceGaduGadu as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes:

Instant message service for Gadu Gadu.
This key takes a string value.

48.28.9 CNInstantMessageServiceGoogleTalk as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes:

Instant message service for Google Talk.
This key takes a string value.

48.28.10 CNInstantMessageServiceICQ as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes:

Instant message service for ICQ.
This key takes a string value.

48.28.11 CNInstantMessageServiceJabber as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes:

Instant message service for Jabber.
This key takes a string value.

48.28.12 CNInstantMessageServiceMSN as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes:

Instant message service for MSN.
This key takes a string value.

48.28.13 CNInstantMessageServiceQQ as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes:

Instant message service for QQ.
This key takes a string value.

48.28.14 CNInstantMessageServiceSkype as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes:

Instant message service for Skype.
This key takes a string value.

48.28.15 CNInstantMessageServiceYahoo as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the service types.
Notes:

Instant message service for Yahoo.
This key takes a string value.

48.28.16 Constructor(username as String, Service as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a CNInstantMessageAddress object initialized with the specified user name and service.
Notes:

username: The user name with which to initialize the CNInstantMessageAddress object.
service: The service with which to Initialize the CNInstantMessageAddress object.

Returns the initialized CNInstantMessageAddress object with the specified user name and service.
User name and service are required to initialize CNInstantMessageAddress object.

48.28.17 copy as CNInstantMessageAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the instant message address object.

48.28.18 localizedStringForKey(key as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a string containing the localized property name.

48.28.19 localizedStringForService(key as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a string containing the localized name of the specified service.

48.28.20 Properties

48.28.21 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNInstantMessageAddress object.
(Read and Write property)

48.28.22 service as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Instant message address service.
Notes: (Read only property)

48.28.23 username as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The user name for instant message service address.
Notes: (Read only property)

48.29 class CNKeyDescriptorMBS

48.29.1 class CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The class for key descriptors.

48.29.2 Blog Entries

- Contacts history for Xojo

48.29.3 Blog Entries

- Contacts history for Xojo

48.29.4 Methods

48.29.5 Constructor(Key as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a key descriptor from a string value.

48.29.6 copy as CNKeyDescriptorMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the key descriptor object.

48.29.7 Operator_Convert as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Converts key to string value.
Notes: Same as using StringValue property, but automatic.
See also:

- 48.29.8 Operator_Convert(Key as String) 9788

48.29.8 Operator_Convert(Key as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a key descriptor from a string value.
Example:

```
dim k as CNKeyDescriptorMBS = CNContactMBS.CNContactJobTitleKey
```

Notes: Same as constructor, but automatic.
See also:

- 48.29.7 Operator_Convert as String 9787

48.29.9 Properties

48.29.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNKeyDescriptor object.
(Read and Write property)

48.29.11 StringValue as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries string value of the key descriptor.
Notes: (Read only property)

48.30 class CNLabeledValueMBS

48.30.1 class CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The class for labeled values.
Notes: The CNLabeledValue class is a thread-safe class that defines an immutable value object that combines a contact property value with a label. For example, a contact phone number could have a label of Home, Work, iPhone, etc.

48.30.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr4

48.30.3 Blog Entries

- MBS Xojo Plugins, version 17.1pr4

48.30.4 Methods

48.30.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.30.6 CNLabelDateAnniversary as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: This constant is a predefined label that can be used in a CNLabeledValue object having an NSDateComponents value.

48.30.7 CNLabelEmailiCloud as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: This constant is a predefined label that can be used in a CNLabeledValue object having an email address string value.
Notes:

Email.

This label takes a string value.

48.30.8 CNLabelHome as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined labels that can be used in a CNLabeledValue object having any value.
Notes:

Home label.
This label takes a string value.

48.30.9 CNLabelOther as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined labels that can be used in a CNLabeledValue object having any value.
Notes:

Other label.
This label takes a string value.

48.30.10 CNLabelURLAddressHomePage as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: This constant is a predefined label that can be used in a CNLabeledValue object having a URL address string value.
Notes:

Identifier for the URL property.
This label takes a string value.

48.30.11 CNLabelWork as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the predefined labels that can be used in a CNLabeledValue object having any value.
Notes:

Work label.
This label takes a string value.

48.30.12 Constructor(label as string, value as Variant)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new labeled value identifier initialized with the specified label and value.
Notes:

label: A string value for the label of the labeled …value object, or nil if the value doesn't have a label.
value: A value for the labeled value object. For valid values, see CNContact properties that are arrays of labeled value objects.

Returns a new labeled value object initialized with the specified identifier.

48.30.13 copy as CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the labeled value object.

48.30.14 labeledValueBySettingLabel(label as string) as CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a labeled value object with an existing value and identifier.
Notes:

label: The label of the copied labeled value object, or nil if the contact property value doesn't have a label.

Returns a labeled value object with an existing value and identifier.
See also:

- 48.30.15 labeledValueBySettingLabel(label as string, value as Variant) as CNLabeledValueMBS 9792

48.30.15 labeledValueBySettingLabel(label as string, value as Variant) as CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a labeled value object with the specified label and value with the existing identifier.
Notes:

label: The label of the copied labeled value object, or "" if the contact property value doesn't have a label.
value: The copied labeled value object. For valid values, see CNContact properties that are arrays of labeled value objects.

Returns a labeled value object with the existing identifier.
See also:

- 48.30.14 labeledValueBySettingLabel(label as string) as CNLabeledValueMBS 9791

48.30.16 labeledValueBySettingValue(value as Variant) as CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new value for an existing label and identifier.
Notes:

value: A new value for the copied labeled value object. For valid values, see CNContact properties that are arrays of labeled value objects.

Returns the CNLabeledValue object with an existing label and identifier.

48.30.17 labeledValueWithLabel(label as string, value as Variant) as CNLabeledValueMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new labeled value identifier object with the specified label and value.
Notes:

label: A string value for the label of the labeled value object, or nil if the value doesn't have a label.
value: A value for the labeled value object. For valid values, see CNContact properties that are arrays of labeled value objects.

Returns a new CNLabeledValue object with a new identifier.

48.30.18 localizedStringForLabel(label as string) as string

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a localized string for the specified label.
Notes:

label: The label to be localized.

Returns a localized string for the label.

All predefined label constants are localized and this method returns their localized strings. A custom label will be returned as is, so this method can be used to convert all labels for display.

48.30.19 Properties

48.30.20 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNLabeledValue object.
(Read and Write property)

48.30.21 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A unique identifier for the labeled value object.
Notes:

It is recommended that you use the identifier when searching for a previously known labeled value object in a re-fetched contact. The identifier can be persisted between the app launches.
(Read only property)

48.30.22 Label as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The label for a contact property value.
Notes:

A contact property can have a label, such as Home, Work, iPhone, etc. For some predefined label constants, seeCNPhoneNumber, and CNContactRelation. Custom labels can also be used. Labels are not used for CNSocialProfile and CNInstantMessageAddress properties.
(Read only property)

48.30.23 Value as Variant

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A contact property value.
Notes:

A contact property value, such as CNPhoneNumberMBS for a phone number, String for an email address, and so on. For valid values, see CNContact properties that are arrays of labeled value objects.
(Read only property)

48.31 class CNMutableContactMBS

48.31.1 class CNMutableContactMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNMutableContact class represents a mutable value object for the contact properties, such as the first name and the phone number of a contact.
Notes:

When CNMutableContact object is a mutable copy of a CNContact object, if you access a CNMutableContact property value that was not fetched for the CNContact object, it throws an CNContactPropertyNotFetchedExceptionName exception. When needed, you can remove contact properties by setting string and array properties to empty, and all other properties to nil.
Available in OS X v10.11 and later.
Subclass of the CNContactMBS class.

48.31.2 Blog Entries

- MBS Xojo Plugins, version 20.5pr1

48.31.3 Blog Entries

- MBS Xojo Plugins, version 20.5pr1

48.31.4 Methods

48.31.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

48.31.6 setContactRelations(contactRelations() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled contact relations for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNContactRelationMBS value.

48.31.7 setDates(dates() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array containing labeled Gregorian dates.
Notes: This property is an array of CNLabeledValue objects, each of which has an String label and NSDateComponentsMBS value. You can use this property to store Gregorian dates such as anniversaries. Day and month are required and year is optional. Calendar is nil or Gregorian. All other date components are invalid.

48.31.8 setEmailAddresses(emailAddresses() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled email addresses for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a String value.

48.31.9 setInstantMessageAddresses(instantMessageAddresses() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled IM addresses for the contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNInstantMessageAddressMBS value.

48.31.10 setPhoneNumbers(phoneNumbers() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled phone numbers for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNPhoneNumberMBS value.

48.31.11 setPostalAddresses(postalAddresses() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled postal addresses for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNPostalAddressMBS value.

48.31.12 setSocialProfiles(socialProfiles() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled social profiles for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a CNSocialProfileMBS value.

48.31.13 setURLAddresses(urlAddresses() as CNLabeledValueMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the array of labeled URL addresses for a contact.
Notes: This property is an array of CNLabeledValue objects, each of which has a label and a string value that contains the URL.

48.31.14 Properties

48.31.15 birthday as NSDateComponentsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A date component for the Gregorian birthday of the contact.
Notes:

A Gregorian birthday can be displayed using this property, whose values are the relevant properties of an NSDateComponents object. Day and month are required for this property, and year is optional. Calendar can be nil or Gregorian. All other date components are invalid.
(Read and Write property)

48.31.16 contactType as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: An enum identifying the contact type.
Notes:

Can be CNContactMBS.CNContactTypeOrganization or CNContactMBS.CNContactTypePerson.
(Read and Write property)

48.31.17 departmentName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the department associated with the contact.
Notes: (Read and Write property)

48.31.18 familyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The family name of the contact.
Example:

```
dim m as new CNMutableContactMBS
m.familyName = "Miller"
msgbox "name: "+m.familyName
```

Notes:

The family name is often known as the last name of the contact.
(Read and Write property)

48.31.19 givenName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The given name of the contact.
Notes:

The given name is often known as the first name of the contact.
(Read and Write property)

48.31.20 imageData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The profile picture of a contact.
Notes:

It is recommended that you fetch this property only when you need to access its value, such as when you need to display the contact's profile picture.

(Read and Write property)

48.31.21 jobTitle as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The contact's job title.
Notes: (Read and Write property)

48.31.22 middleName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The middle name of the contact.
Notes: (Read and Write property)

48.31.23 namePrefix as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name prefix of the contact.
Notes: (Read and Write property)

48.31.24 nameSuffix as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name suffix of the contact.
Notes: (Read and Write property)

48.31.25 nickname as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The nickname of the contact.
Notes: (Read and Write property)

48.31.26 nonGregorianBirthday as NSDateComponentsMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A date component for the non-Gregorian birthday of the contact.
Notes:

A non-Gregorian birthday such as Lunisolar birthdays can be displayed using this property, whose values are the relevant properties of an NSDateComponents object. Day and month are required; year and leapMonth are optional. The calendar property is also required and must be non-Gregorian. Some supported calendars are Buddhist, Chinese, and Islamic. All other date components are invalid.
(Read and Write property)

48.31.27 note as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: A string containing notes for the contact.
Notes: (Read and Write property)

48.31.28 organizationName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the organization associated with the contact.
Notes: (Read and Write property)

48.31.29 phoneticFamilyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic family name of the contact.
Notes:

This property contains a string that specifies the pronunciation of the contact's family (or last) name.
(Read and Write property)

48.31.30 phoneticGivenName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic given name of the contact.
Notes:

This property contains a string that specifies the pronunciation of the contact's given (or first) name.
(Read and Write property)

48.31.31 phoneticMiddleName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic middle name of the contact.
Notes:

This property contains a string that specifies the pronunciation of the contact's middle name.
(Read and Write property)

48.31.32 phoneticOrganizationName as String

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The phonetic name of the organization associated with the contact.
Notes:

This property contains a string that specifies the pronunciation of the contact's organization name.
Requires macOS 10.12 or newer.
(Read and Write property)

48.31.33 previousFamilyName as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The previous family name of the contact.
Notes:

The previous family name is often known as the maiden name of the contact.
(Read and Write property)

48.31.34 valueForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries or sets value for a given key.
Notes: (Read and Write computed property)

48.32 class CNMutableGroupMBS

48.32.1 class CNMutableGroupMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNMutableGroup class defines a mutable value object representing a group for a contact.
Notes:

Contacts may be members of one or more groups, depending upon the accounts they come from.
Subclass of the CNGroupMBS class.

48.32.2 Methods

48.32.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

48.32.4 Properties

48.32.5 Name as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Name of the group.
Example:

```
dim m as new CNMutableGroupMBS
m.Name = "Hello"
```

Notes: (Read and Write property)

48.32.6 valueForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries or sets value for a given key.
Notes: (Read and Write computed property)

48.33 class CNMutablePostalAddressMBS

48.33.1 class CNMutablePostalAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNMutablePostalAddress class defines a mutable value object representing the postal address for a contact.
Notes:

To remove properties when saving a mutable postal address, set string properties to empty values.
Subclass of the CNPostalAddressMBS class.

48.33.2 Xojo Developer Magazine

- 18.5, page 83: Maps (Part 6), A deep dive into Annotations by Markus Winter

48.33.3 Xojo Developer Magazine

- 18.5, page 83: Maps (Part 6), A deep dive into Annotations by Markus Winter

48.33.4 Methods

48.33.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

48.33.6 Properties

48.33.7 City as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The city name.
Example:

```
dim m as new CNMutablePostalAddressMBS
m.City = "New York"
MsgBox m.city
```

Notes: (Read and Write property)

48.33.8 Country as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The country name.
Notes: (Read and Write property)

48.33.9 ISOCountryCode as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The ISO country code.
Notes: (Read and Write property)

48.33.10 PostalCode as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The postal code.
Notes: (Read and Write property)

48.33.11 State as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The state name.
Notes: (Read and Write property)

48.33.12 Street as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The street name.
Notes:

A multiline address is delimited with carriage returns (that is, "\n").
(Read and Write property)

48.34 class CNPhoneNumberMBS

48.34.1 class CNPhoneNumberMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNPhoneNumber class defines an immutable value object representing a phone number for a contact.
Notes: It is a thread-safe class.

48.34.3 Blog Entries

- MBS Xojo Plugins, version 21.1pr1

48.34.4 Methods

48.34.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.34.6 CNLabelPhoneNumberAppleWatch as String

MBS Mac64bit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Phone number for Apple Watch.
Notes:

This label takes a string value.
Available in macOS 11.1 or newer.

48.34.7 CNLabelPhoneNumberHomeFax as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Home fax number.
Notes: This label takes a string value.

48.34.8 CNLabelPhoneNumberiPhone as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: iPhone number.
Notes: This label takes a string value.

48.34.9 CNLabelPhoneNumberMain as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Main phone number.
Notes: This label takes a string value.

48.34.10 CNLabelPhoneNumberMobile as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Mobile phone number.
Notes: This label takes a string value.

48.34.11 CNLabelPhoneNumberOtherFax as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Other fax number.
Notes: This label takes a string value.

48.34.12 CNLabelPhoneNumberPager as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Pager phone number.
Notes: This label takes a string value.

48.34.13 CNLabelPhoneNumberWorkFax as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Work fax number.
Notes: This label takes a string value.

48.34.14 Constructor(value as string)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new phone number object initialized with the specified phone number string.
Notes: You should initialize this with a phone number string. This method fails when the value of string is empty.

48.34.15 copy as CNPhoneNumberMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the phone number object.

48.34.16 phoneNumberWithStringValue(p as string) as CNPhoneNumberMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new phone number object initialized with the specified phone number string.
Notes:

This is a convenience class method that provides the same functionality as Constructor.
This method fails when the value of stringValue is "".

48.34.17 Properties

48.34.18 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNPhoneNumber object.
(Read and Write property)

48.34.19 stringValue as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The string value of the phone number.
Notes: (Read only property)

48.35 class CNPostalAddressFormatterMBS

48.35.1 class CNPostalAddressFormatterMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNPostalAddressFormatter class formats the postal address in a contact.
Notes: This class handles international formatting of postal addresses. It is recommended that you create an instance of this class when formatting many postal addresses, and use the instance methods; otherwise use the class methods.

48.35.2 Methods

48.35.3 attributedStringFromPostalAddress(postalAddress as CNPostalAddressMBS, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a formatted postal address as an attributed string.
Notes:

postalAddress: The postal address to format.
DefaultAttributes: The default attributes to use. To learn more, see NSFormatter.

Returns the formatted postal address as an attributed string.

This method behaves similarly to stringFromPostalAddress, except that it returns an attributed string. It includes the attribute key CNPostalAddressPropertyAttribute, whose attribute values are postal address property keys, such as CNPostalAddressStreetKey. This identifies the postal address components in the formatted postal address. Also includes the attribute key CNPostalAddressLocalizedPropertyNameAttribute whose attribute values are the localized strings for the postal address property keys.
See also:

- 48.35.4 attributedStringFromPostalAddress(postalAddress as CNPostalAddressMBS, style as Integer, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS 9810

48.35.4 attributedStringFromPostalAddress(postalAddress as CNPostalAddressMBS, style as Integer, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a formatted postal address as an attributed string.
Notes:

postalAddress: The postal address to format.
DefaultAttributes: The default attributes to use. To learn more, see NSFormatter.

Returns the formatted postal address as an attributed string.

This method behaves similarly to stringFromPostalAddress, except that it returns an attributed string. It includes the attribute key CNPostalAddressPropertyAttribute, whose attribute values are postal address property keys, such as CNPostalAddressStreetKey. This identifies the postal address components in the formatted postal address. Also includes the attribute key CNPostalAddressLocalizedPropertyNameAttribute whose attribute values are the localized strings for the postal address property keys.
See also:

- 48.35.3 attributedStringFromPostalAddress(postalAddress as CNPostalAddressMBS, DefaultAttributes as Dictionary = nil) as NSAttributedStringMBS 9810

48.35.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.35.6 CNPostalAddressLocalizedPropertyNameAttribute as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: This constant is a key in the attributed string whose value is a localized version of the CNPostalAddress property key.
Notes: This label takes a string value.

48.35.7 CNPostalAddressPropertyAttribute as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: This constant is a key in the attributed string whose value is a CNPostalAddress property key.
Notes: This key takes a string value.

48.35.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

48.35.9 stringFromPostalAddress(postalAddress as CNPostalAddressMBS) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a formatted postal address.
See also:

- 48.35.10 stringFromPostalAddress(postalAddress as CNPostalAddressMBS, style as Integer) as String 9812

48.35.10 stringFromPostalAddress(postalAddress as CNPostalAddressMBS, style as Integer) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a formatted postal address.
Notes: Style can currently only be CNPostalAddressFormatterStyleMailingAddress.
See also:

- 48.35.9 stringFromPostalAddress(postalAddress as CNPostalAddressMBS) as String 9812

48.35.11 Properties

48.35.12 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNPostalAddressFormatter object.
(Read and Write property)

48.35.13 Style as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The style to use.
Notes:

Style can currently only be CNPostalAddressFormatterStyleMailingAddress.
(Read and Write property)

48.35.14 Constants

48.35.15 CNPostalAddressFormatterStyleMailingAddress = 0

MBS Mac64bit Plugin, Plugin Version: 16.3.

Function: One of the style constants.

48.36 class CNPostalAddressMBS

48.36.1 class CNPostalAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNPostalAddress class defines an immutable object that represents the postal address for a contact.
Notes:

This is a thread-safe class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

48.36.2 Xojo Developer Magazine

48.36.3 Xojo Developer Magazine

- 18.5, page 83: Maps (Part 6), A deep dive into Annotations by Markus Winter

48.36.4 Methods

48.36.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.36.6 CNPostalAddressCityKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes:

City.
This key takes a string value.

48.36.7 CNPostalAddressCountryKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes:

Country.
This key takes a string value.

48.36.8 CNPostalAddressISOCountryCodeKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes:

ISO country code.
This key takes a string value.

48.36.9 CNPostalAddressPostalCodeKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes:

Postal code.
This key takes a string value.

48.36.10 CNPostalAddressStateKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes:

State.
This key takes a string value.

48.36.11 CNPostalAddressStreetKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties to fetch.
Notes:

Street.
This key takes a string value.

48.36.12 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

48.36.13 copy as CNPostalAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the postal address object.

48.36.14 localizedStringForKey(key as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the localized name for the property associated with the specified key.
Example:

MsgBox CNPostalAddressMBS.localizedStringForKey(CNPostalAddressMBS.CNPostalAddressStreetKey)

48.36.15 mutableCopy as CNMutablePostalAddressMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of this postal address.

48.36.16 Properties

48.36.17 City as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The city name in a postal address.
Notes: (Read only property)

48.36.18 Country as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The country name in a postal address.
Notes: (Read only property)

48.36.19 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNPostalAddress object.
(Read and Write property)

48.36.20 ISOCountryCode as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The ISO country code for the country in a postal address.
Notes: (Read only property)

48.36.21 PostalCode as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The postal code in a postal address.
Notes: (Read only property)

48.36.22 State as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The state name in a postal address.
Notes: (Read only property)

48.36.23 Street as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The street name in a postal address.
Notes:

Multiline addresses are delimited by carriage returns (that is, "\n").
(Read only property)

48.37 class CNSaveRequestMBS

48.37.1 class CNSaveRequestMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNSaveRequest class defines a save request operation for contacts.
Notes: The CNSaveRequest class creates a new save request for each save operation on the contact store. You can batch multiple changes into one save request (note that these changes only apply to objects). In the case of overlapping changes in multiple or concurrent save requests, the last change wins. If you try to add an object (that is, a contact, or a group,) that already exists in the contact store, the CNErrorCodeInsertedRecordAlreadyExists error occurs and the CNErrorUserInfoAffectedRecordsKey array is updated to contain the object you tried to add. If you try to update or delete an object that is not present in the contact store, the save request does not perform the update or deletion, the CNErrorCodeRecordDoesNotExist error occurs, and the CNErrorUserInfoAffectedRecordsKey array is updated to contain the object you tried to update or delete. Do not access objects in the save request while a save request is executing.

48.37.2 Methods

48.37.3 addContact(contact as CNMutableContactMBS, ContainerIdentifier as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Adds the specified contact to the contact store.
Notes:

contact: The new contact to add.
identifier: The identifier of the container to add the new contact. To add the new contact to the default container set identifier to "".

This method overrides any previously made deletion requests for the contact. The new contact may be modified by executing the save request.

48.37.4 addGroup(group as CNMutableGroupMBS, identifier as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a group to the contact store.
Notes:

group: The group to add.
identifier: The identifier of the container to add the new group. To add the new group to the default container, set identifier to "".

This method overrides any previously made delete request for the group.

48.37.5 addMember(contact as CNContactMBS, group as CNGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a contact as a member of a group.
Notes:

contact: The contact to add to the group membership.
group: The group to add the contact to its membership.

This method overrides any previously made remove membership request on the contact from the group.

48.37.6 addSubgroup(subgroup as CNGroupMBS, group as CNGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Adds a subgroup to a group.

48.37.7 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.37.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

48.37.9 deleteContact(contact as CNMutableContactMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Deletes a contact from the contact store.
Notes: contact: Contact to be delete.

48.37.10 deleteGroup(contact as CNMutableGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Deletes a group from the contact store.
Notes:

group: The group to delete.

This method overrides any previously made add request on the group. The group to be deleted must already exist in the contact store. If it does not, the delete request fails, the CNErrorCodeRecordDoesNotExist error is thrown, and the CNErrorUserInfoAffectedRecordsKey array is updated to contain that object.

48.37.11 removeMember(contact as CNContactMBS, group as CNGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Removes a contact as a member of a group.
Notes:

contact: The contact to remove from the group membership.
group: The group to remove the contact from its membership.

This method removes the contact from the group, but does not delete it from the contact store. This method overrides any previously made add membership request on the contact to the group.

48.37.12 removeSubgroup(subgroup as CNGroupMBS, group as CNGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop only.

Function: Removes a subgroup from a group.

48.37.13 updateContact(contact as CNMutableContactMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Updates an existing contact in the contact store.
Notes:

contact: The contact to update.

The contact to be updated must already exist in the contact store. If it does not, the update request fails, the CNErrorCodeRecordDoesNotExist error occurs, and the CNErrorUserInfoAffectedRecordsKey array is updated to contain the object. Note that the contact may be modified when the save request is executing.

48.37.14 updateGroup(contact as CNMutableGroupMBS)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Updates an existing group in the contact store.
Notes:

group: The group to update.

The group to be updated must already exist in the contact store. If it does not, the update request fails, the CNErrorCodeRecordDoesNotExist error is thrown, and the CNErrorUserInfoAffectedRecordsKey array is updated to contain that object.

48.37.15 Properties

48.37.16 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNSaveRequest object.
(Read and Write property)

48.37.17 transactionAuthor as String

MBS Mac64bit Plugin, Plugin Version: 22.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The author of this transaction.
Notes:

Use this, in conjunction with CNChangeHistoryFetchRequestMBS.excludedTransactionAuthors, to suppress fetching of changes the author already knows about.
(Read and Write property)

48.38 class CNSocialProfileMBS

48.38.1 class CNSocialProfileMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The CNSocialProfile class defines an immutable object representing a social profile.
Example:

```
dim ContactStore as new CNContactStoreMBS
dim c as new CNMutableContactMBS

c.givenName = "Bob"

dim sr as new CNSaveRequestMBS

dim ContainerIdentifier as string = ContactStore.defaultContainerIdentifier
sr.addContact c, ContainerIdentifier

dim e as NSErrorMBS
if ContactStore.executeSaveRequest(sr, e) then
MsgBox "Saved"
else
MsgBox "Failed to save contact"+EndOfLine+EndOfLine+e.localizedDescription
end if
```

Notes: This is a thread-safe class. Some social profile services, such as Facebook and Twitter are predefined in this class. You can also specify your own social profile service with Constructor.

48.38.2 Methods

48.38.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Should return true in a 64-bit Mac app on Mac OS X 10.11 or newer.

48.38.4 CNSocialProfileServiceFacebook as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.

Notes: Facebook

48.38.5 CNSocialProfileServiceFlickr as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Flickr

48.38.6 CNSocialProfileServiceGameCenter as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Game Center

48.38.7 CNSocialProfileServiceKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties.
Notes:

The social profile service.
This key takes a string value.

48.38.8 CNSocialProfileServiceLinkedIn as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: LinkedIn

48.38.9 CNSocialProfileServiceMySpace as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: MySpace

48.38.10 CNSocialProfileServiceSinaWeibo as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Sina Weibo

48.38.11 CNSocialProfileServiceTencentWeibo as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Tencent Weibo

48.38.12 CNSocialProfileServiceTwitter as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Twitter

48.38.13 CNSocialProfileServiceYelp as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the possible service keys.
Notes: Yelp

48.38.14 CNSocialProfileURLStringKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties.
Notes: The URL of the service.

48.38.15 CNSocialProfileUserIdentifierKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties.
Notes:

The social profile user identifier.
This key takes a string value.

48.38.16 CNSocialProfileUsernameKey as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties.
Notes:

The social profile user name.
This key takes a string value.

48.38.17 Constructor(URLString as String, UserName as String, Identifier as String, Service as String)

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes a new social profile object with the specified URL.
Notes:

urlString: The URL for the social profile.
username: The user name for the social profile.
userIdentifier: The service's user identifier for the social profile.
service: The service name of the social profile.

48.38.18 copy as CNSocialProfileMBS

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a copy of the social profile object.

48.38.19 localizedStringForKey(key as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the localized name of the property for the specified key.
Example:

MsgBox CNSocialProfileMBS.localizedStringForService(CNSocialProfileServiceGameCenter)

Notes: key: Key for which to get the localized property name.

48.38.20 localizedStringForService(service as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the localized name of the specified service.
Example:

MsgBox CNSocialProfileMBS.localizedStringForKey(CNSocialProfileUsernameKey)

Notes: service: The service name for which to get the localized name.

48.38.21 Properties

48.38.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes:

Value is a pointer to a CNSocialProfile object.
(Read and Write property)

48.38.23 service as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The social profile's service name.
Notes: (Read only property)

48.38.24 urlString as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The URL associated with the social profile.
Notes: (Read only property)

48.38.25 userIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The service's user identifier associated with the social profile.
Notes: (Read only property)

48.38.26 username as String

MBS Mac64bit Plugin, Plugin Version: 16.3, Platform: macOS, Targets: Desktop & iOS.

Function: The user name for the social profile.
Notes: (Read only property)

Chapter 49

Controls

49.1 control ButtonMBS

49.1.1 control ButtonMBS

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A control to have a custom button in Xojo.
Deprecated: This item is deprecated and should no longer be used. You can use Canvas instead. **Notes:**

You provide the images for the button and the control will do the rest.

There are possibilities that this control shows thru pagepanels from a hidden panel.

49.1.2 Xojo Developer Magazine

- 6.6, page 8: News

49.1.3 Xojo Developer Magazine

- 6.6, page 8: News

49.1.4 Properties

49.1.5 ImageDisabled as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image used if the button is disabled.
Notes: (Read and Write property)

49.1.6 ImageMouseOver as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image used for the unpressed button if the mouse is over the button.
Notes: (Read and Write property)

49.1.7 ImageNormal as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image for the normal state.
Notes: (Read and Write property)

49.1.8 ImagePressed as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image used for the pressed button.
Notes: (Read and Write property)

49.1.9 ImagePressedDisabled as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image used when the button is pressed and the button is disabled.
Notes:

If this image is nil, the ImagePressed picture is used.
(Read and Write property)

49.1.10 ImagePressedMouseOver as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image used when the button is pressed and the mouse is over the button.
Notes:

If this image is nil, the ImagePressed picture is used.
(Read and Write property)

49.1.11 Sticky as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether the button is sticky.
Notes:

Normally the value is set to false when you release the mouse button.
If Sticky is true, the button is not unpressed.
(Read and Write property)

49.1.12 TestEnabled as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This property can be used to see in the window editor how the button looks like when the button is enabled.
Notes:

This property is only for designing, not for runtime.
(Read and Write property)

49.1.13 TestMouseOver as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This property can be used to see in the window editor how the button looks like if the mouse is over the button.
Notes:

This property is only for designing, not for runtime.
(Read and Write property)

49.1.14 TestPressed as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: This property can be used to see in the window editor how the button looks like when the button is pressed.
Notes:

This property is only for designing, not for runtime.
(Read and Write property)

49.1.15 Toggle as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether the button should toggle.
Notes:

If pressed the button switches the value property.

Set Sticky to true if use set Toggle to true.
(Read and Write property)

49.1.16 Value as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether the button is currently pressed.
Notes:

True if the button is pressed.
(Read and Write property)

49.1.17 Events

49.1.18 Action(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the mouse button is clicked in the control.
Notes: Currently called after each MouseUp event.

49.1.19 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to close.

49.1.20 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

49.1.21 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

49.1.22 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event where you can enable menu items.

49.1.23 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

49.1.24 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The mouse drag event.

49.1.25 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the mouse button is released.

49.1.26 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to was created and you can initialize it.

49.1.27 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

49.2 class Control

49.2.1 class Control

Plugin Version: 9.7, Platform: macOS, Targets: Desktop only.

Function: The built in Control class in Xojo.

49.2.2 Methods

49.2.3 CALayerMBS as CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the Core Animation layer that the receiver uses as its backing store.
Notes:

Works only in Cocoa target.
Also sets wantsLayer to true for the view to make sure it has a layer.

49.2.4 NSControlMBS as NSControlMBS

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Creates a NSControlMBS object for the given control.
Example:

BevelButton1.NSControlMBS.StringValue = "Hello"

Notes: This way you can manipulate Cocoa controls directly.

49.2.5 NSViewMBS as NSViewMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop only.

Function: Creates a NSViewMBS object for the given control.
Example:

MsgBox PushButton1.NSViewMBS.className

Notes:

This way you can manipulate Cocoa controls directly.
For a pushbutton you may want to cast the NSViewMBS to NSButtonMBS to have more options.

49.2.6 WinClassNameMBS as string

MBS Win Plugin, Plugin Version: 14.3, Platform: Windows, Targets: Desktop only.

Function: Returns internal control class name for a Windows control.

49.3 Globals

49.3.1 ShowModalWithinThreadSafeMBS(extends theMessageDialog as MessageDialog, parent as DesktopWindow)

MBS Util Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call ShowModalWithin method on main thread.
Notes:

This method is to allow you to call the ShowModalWithin method of a MessageDialog in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

Of course as this is asynchronously, you do not get details on which button was pressed.
Deprecated. Behavior from Xojo changed, so this method does no longer work.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.3.2 ShowModalThreadSafeMBS(extends theMessageDialog as MessageDialog)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call ShowModal method on main thread.
Notes:

This method is to allow you to call the ShowModal method of a MessageDialog in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

Of course as this is asynchronously, you do not get details on which button was pressed.
Deprecated. Behavior from Xojo changed, so this method does no longer work.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.3.5 ShowModalWithinThreadSafeMBS(extends theMessageDialog as MessageDialog, parent as window)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call ShowModalWithin method on main thread.
Notes:

This method is to allow you to call the ShowModalWithin method of a MessageDialog in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

Of course as this is asynchronously, you do not get details on which button was pressed.
Deprecated. Behavior from Xojo changed, so this method does no longer work.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.3.6 Blog Entries

- MBS Real Studio Plugins, version 13.0pr6

49.4 control CustomControlMBS

49.4.1 control CustomControlMBS

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A control where you can in the IDE define the paint event and see in the IDE what you see in the compiled application.
Deprecated: This item is deprecated and should no longer be used. You can use Canvas instead.

49.4.2 Properties

49.4.3 Code as String

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The code for the paint event.
Notes:

Commands:
PenWidth n
PenHeight n
ForeColor n
FillRect x,y,w,h
DrawRect x,y,w,h
FillRoundRect x,y,w,h,X,Y
DrawRoundRect x,y,w,h,X,Y
FillOval x,y,w,h
DrawOval x,y,w,h
DrawPicture X,x,y,w,h - draws picture number X into the given rectangle
DrawLine x1,y1,x1,y1 - draws line

Variables:
width: width of control
height: height of control
left: left position of control
top: top position of control
ValueX: Value of the ValueX property (X from 1 to 4)
ColorX: Value of the Color1 property (X from 1 to 4)
(Read and Write property)

49.4.4 Color1 as Color

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the color properties.
Notes: (Read and Write property)

49.4.5 Color2 as Color

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the color properties.
Notes: (Read and Write property)

49.4.6 Color3 as Color

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the color properties.
Notes: (Read and Write property)

49.4.7 Color4 as Color

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the color properties.
Notes: (Read and Write property)

49.4.8 Picture1 as Picture

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the picture properties you can use for the drawpicture command.
Notes: (Read and Write property)

49.4.9 Picture2 as Picture

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the picture properties you can use for the drawpicture command.
Notes: (Read and Write property)

49.4.10 Picture3 as Picture

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the picture properties you can use for the drawpicture command.
Notes: (Read and Write property)

49.4.11 Picture4 as Picture

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the picture properties you can use for the drawpicture command.
Notes: (Read and Write property)

49.4.12 Value1 as String

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the value properties.
Notes: (Read and Write property)

49.4.13 Value2 as String

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the value properties.
Notes: (Read and Write property)

49.4.14 Value3 as String

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the value properties.
Notes: (Read and Write property)

49.4.15 Value4 as String

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: One of the value properties.
Notes: (Read and Write property)

49.4.16 Events

49.4.17 Close

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to close.

49.4.18 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

49.4.19 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

49.4.20 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event where you can enable menu items.

49.4.21 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user clicks with the mouse in the control area.
Notes:

Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

49.4.22 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The mouse drag event.

49.4.23 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

49.4.24 Open

MBS Overlay Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to was created and you can initialize it.

49.4.25 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

49.5 class DesktopControl

49.5.1 class DesktopControl

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in Control class in Xojo.

49.5.2 Methods

49.5.3 CALayerMBS as CALayerMBS

MBS MacCG Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the Core Animation layer that the receiver uses as its backing store.
Notes:

Works only in Cocoa target.
Also sets wantsLayer to true for the view to make sure it has a layer.

49.5.4 NSControlMBS as NSControlMBS

MBS MacCocoa Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSControlMBS object for the given control.
Example:

BevelButton1.NSControlMBS.StringValue = "Hello"

Notes: This way you can manipulate Cocoa controls directly.

49.5.5 NSViewMBS as NSViewMBS

MBS MacBase Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSViewMBS object for the given control.
Example:

MsgBox PushButton1.NSViewMBS.className

Notes:

This way you can manipulate Cocoa controls directly.
For a pushbutton you may want to cast the NSViewMBS to NSButtonMBS to have more options.

49.5.6 WinClassNameMBS as string

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns internal control class name for a Windows control.

49.6 class DesktopLabel

49.6.1 class DesktopLabel

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: An extension of Xojo's internal control.

49.6.2 Methods

49.6.3 NSTextFieldMBS as NSTextFieldMBS

MBS MacCocoa Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextFieldMBS object for the given control.
Notes: This way you can manipulate Cocoa controls directly.

49.6.4 SetTextThreadSafeMBS(text as string)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets text property on main thread.
Notes:

This method is to allow you to set the text property of a label in a thread without a problem.

If called on main thread, the plugin will simply set text property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.7 class DesktopListbox

49.7.1 class DesktopListbox

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in listbox class in Xojo.

49.7.2 Methods

49.7.3 HorizontalNSScrollerMBS as NSScrollerMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns horizontal scrollbar for a listbox.
Notes: Only for Cocoa target.

49.7.4 RefreshCellThreadSafeMBS(Row As Integer, Column As Integer)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Calls refresh cell on main thread.
Notes:

This method is to allow you to invalidate a listbox cell in a thread without a problem.

If called on main thread, the plugin will simply call through directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.7.5 VerticalNSScrollerMBS as NSScrollerMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns vertical scrollbar for a listbox.
Notes: Only for Cocoa target.

49.8 class DesktopProgressbar

49.8.1 class DesktopProgressbar

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in progressbar class in Xojo.

49.8.2 Methods

49.8.3 NSProgressIndicatorMBS as NSProgressIndicatorMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSProgressIndicatorMBS object for the given control.
Example:

MsgBox ProgressBar1.NSProgressIndicatorMBS.className

Notes: This way you can manipulate Cocoa controls directly.

49.8.4 SetMaximumThreadSafeMBS(maximum as integer)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets maximum property on main thread.
Notes:

This method is to allow you to set the maximum property of a progressbar in a thread without a problem.

If called on main thread, the plugin will simply set maximum property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.8.5 SetValueThreadSafeMBS(value as integer)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets value property on main thread.
Notes:

This method is to allow you to set the value property of a progressbar in a thread without a problem.

If called on main thread, the plugin will simply set value property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.9 class DesktopTextField

49.9.1 class DesktopTextField

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in TextField class in Xojo.

49.9.2 Methods

49.9.3 NSTextFieldMBS as NSTextFieldMBS

MBS MacCocoa Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextFieldMBS object for the given control.
Notes:

This way you can manipulate Cocoa controls directly.
Seems like Xojo 2011r1 uses a NSTextField, so this method should return an object on Cocoa targets.

49.9.4 NSTextViewMBS as NSTextViewMBS

MBS MacCocoa Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextViewMBS object for the given control.
Notes:

This way you can manipulate Cocoa controls directly.
Seems like Xojo 2011r1 uses a NSTextField, so this method should return nil on Cocoa targets. Please use NSTextFieldMBS method in this case.

49.9.5 SetTextThreadSafeMBS(text as string)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets text property on main thread.
Notes:

This method is to allow you to set the text property of a label in a thread without a problem.

If called on main thread, the plugin will simply set text property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.10 class DesktopUIControl

49.10.1 class DesktopUIControl

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: An extension of Xojo's internal control.

49.10.2 Methods

49.10.3 RefreshThreadSafeMBS(immediately as Boolean = False)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call refresh method on main thread.
Notes:

This method is to allow you to call the refresh method of a control in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

- 49.10.4 RefreshThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, immediately as Boolean = False) 9852

49.10.4 RefreshThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, immediately as Boolean = False)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call refresh method on main thread.
Notes:

This method is to allow you to call the refresh method of a control in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDele-

gateOnMainThreadMBS instead to do several update steps on one.
See also:

- 49.10.3 RefreshThreadSafeMBS(immediately as Boolean = False) 9852

49.10.5 SetEnabledThreadSafeMBS(value as boolean)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets enabled property on main thread.
Notes:

This method is to allow you to set the enabled property of a control in a thread without a problem.

If called on main thread, the plugin will simply set enabled property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.10.6 SetVisibleThreadSafeMBS(value as boolean)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets visible property on main thread.
Notes:

This method is to allow you to set the visible property of a control in a thread without a problem.

If called on main thread, the plugin will simply set visible property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.11 control ImageMBS

49.11.1 control ImageMBS

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A control for Xojo to draw an image into a window.
Deprecated: This item is deprecated and should no longer be used. You can use Canvas instead. **Notes:** The image is scaled to the size of the control.

49.11.6 Properties

49.11.7 Backdrop as Picture

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image to display.
Notes:

This image is scaled to the needed size.
(Read and Write property)

49.11.8 Events

49.11.9 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to close.

49.11.10 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

49.11.11 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

49.11.12 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event where you can enable menu items.

49.11.13 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user clicks with the mouse in the control area.
Notes:

Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

49.11.14 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The mouse drag event.

49.11.15 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

49.11.16 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to was created and you can initialize it.

49.11.17 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

49.12 class Label

49.12.1 class Label

Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: An extension of Xojo's internal control.

49.12.2 Methods

49.12.3 NSTextFieldMBS as NSTextFieldMBS

MBS MacCocoa Plugin, Plugin Version: 13.3, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextFieldMBS object for the given control.
Notes: This way you can manipulate Cocoa controls directly.

49.12.4 SetTextThreadSafeMBS(text as string)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets text property on main thread.
Notes:

This method is to allow you to set the text property of a label in a thread without a problem.

If called on main thread, the plugin will simply set text property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.13 control LineMBS

49.13.1 control LineMBS

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A control for Xojo to draw a line into a window.
Deprecated: This item is deprecated and should no longer be used. You can use Line instead. **Notes:** Basicly the same as the original Line control from Xojo.

49.13.6 Properties

49.13.7 BorderWidth as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the line.
Notes:

Set to 0 to disabled the border.
(Read and Write property)

49.13.8 LineColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for drawing the line.
Notes:

There is a bug in Xojo. If you enter the color as a hex value (e.g. "& c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

49.13.9 Mirror as Boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether the line is mirrored.
Notes:

Normally the line is drawn from top left to bottom right.
If Mirror is true, the line is drawn from bottom left to top right.
(Read and Write property)

49.13.10 Events

49.13.11 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to close.

49.13.12 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

49.13.13 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

49.13.14 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event where you can enable menu items.

49.13.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user clicks with the mouse in the control area.
Notes:

Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

49.13.16 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The mouse drag event.

49.13.17 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

49.13.18 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to was created and you can initialize it.

49.13.19 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

49.14 class Listbox

49.14.1 class Listbox

Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in listbox class in Xojo.

49.14.2 Methods

49.14.3 HorizontalNSScrollerMBS as NSScrollerMBS

MBS MacControls Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Returns horizontal scrollbar for a listbox.
Notes: Only for Cocoa target.

49.14.4 Blog Entries

- MBS Real Studio Plugins, version 13.0fc1

49.14.5 InvalidateCellThreadSafeMBS(Row as Integer, Column as Integer)

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Calls invalide cell on main thread.
Notes:

This method is to allow you to invalidate a listbox cell in a thread without a problem.

If called on main thread, the plugin will simply call through directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.15.4 Properties

49.15.5 BorderColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for drawing the border.
Notes:

There is a bug in Xojo. If you enter the color as a hex value (e.g. "& c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

49.15.6 BorderWidth as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the border line.
Notes:

Set to 0 to disabled the border.
(Read and Write property)

49.15.7 FillColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for filling the oval.
Notes:

There is a bug in Xojo. If you enter the color as a hex value (e.g. "& c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

49.15.8 Events

49.15.9 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to close.

49.15.10 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

49.15.11 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

49.15.12 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event where you can enable menu items.

49.15.13 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user clicks with the mouse in the control area.
Notes:

Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

49.15.14 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The mouse drag event.

49.15.15 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

49.15.16 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to was created and you can initialize it.

49.15.17 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

49.16 class ProgressBar

49.16.1 class ProgressBar

Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in progressbar class in Xojo.

49.16.2 Methods

49.16.3 NSProgressIndicatorMBS as NSProgressIndicatorMBS

MBS MacControls Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop only.

Function: Creates a NSProgressIndicatorMBS object for the given control.
Example:

MsgBox ProgressBar1.NSProgressIndicatorMBS.className

Notes: This way you can manipulate Cocoa controls directly.

49.16.4 SetMaximumThreadSafeMBS(maximum as Integer)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets maximum property on main thread.
Notes:

This method is to allow you to set the maximum property of a progressbar in a thread without a problem.

If called on main thread, the plugin will simply set maximum property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.17.4 Properties

49.17.5 BorderWidth as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the border line.
Notes:

Set to 0 to disabled the border.
(Read and Write property)

49.17.6 BottomRightColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for drawing the bottom and right border lines.
Notes:

There is a bug in Xojo. If you enter the color as a hex value (e.g. "& c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

49.17.7 FillColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for filling the rectangle.
Notes:

There is a bug in Xojo. If you enter the color as a hex value (e.g. "& c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

49.17.8 TopLeftColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for drawing the top and left border lines.
Notes:

There is a bug in Xojo. If you enter the color as a hex value (e.g. "& c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

49.17.9 Events

49.17.10 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to close.

49.17.11 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

49.17.12 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

49.17.13 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event where you can enable menu items.

49.17.14 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user clicks with the mouse in the control area.
Notes:

Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

49.17.15 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The mouse drag event.

49.17.16 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

49.17.17 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to was created and you can initialize it.

49.17.18 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

49.18 class RectControl

49.18.1 class RectControl

Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: An extension of Xojo's internal control.

49.18.2 Methods

49.18.3 InvalidateThreadSafeMBS(EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Call invalidate method on main thread.
Notes:

This method is to allow you to call the invalidate method of a control in a thread without a problem.

If called on main thread, the plugin will simply call method directly.
If called on other threads the plugin will schedule to call the method a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

49.19 control RoundRectangleMBS

49.19.1 control RoundRectangleMBS

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A control for Xojo to draw a round rectangle into a window.
Deprecated: This item is deprecated and should no longer be used. You can use RoundRectangle instead.
Notes:

Basicly the same as the original round rectangle control from Xojo.
For composite windows there is a non zero chance that you see redraw problems.

49.19.2 Properties

49.19.3 BorderColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for drawing the border lines.
Notes:

There is a bug in Xojo. If you enter the color as a hex value (e.g. "& c123456"), the control will get black as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

49.19.4 BorderWidth as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the border line.
Notes:

Set to 0 to disabled the border.
(Read and Write property)

49.19.5 FillColor as Color

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The color for filling the rectangle.
Notes:

There is a bug in Xojo. If you enter the color as a hex value (e.g. "& c123456"), the control will get black

as color. If you use the color panel using the "..." buttons, the control will get the correct color.
(Read and Write property)

49.19.6 OvalHeight as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The height of the rounded corners in pixels.
Notes: (Read and Write property)

49.19.7 OvalWidth as Integer

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the rounded corners in pixels.
Notes: (Read and Write property)

49.19.8 Events

49.19.9 Close

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to close.

49.19.10 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Overlay Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

49.19.11 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or

false to give others a chance.

49.19.12 EnableMenuItems

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event where you can enable menu items.

49.19.13 MouseDown(x as Integer, y as Integer, Modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user clicks with the mouse in the control area.
Notes:

Return true to handle the event and enable the MouseUp event.

This event exists because RB does not add a Mousedown event by default to the plugin control.

49.19.14 MouseDrag(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The mouse drag event.

49.19.15 MouseUp(x as Integer, y as Integer)

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when the user releases the mouse button and you returned true on the MouseDown event.

49.19.16 Open

MBS Overlay Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The control is about to was created and you can initialize it.

49.19.17 ScaleFactorChanged(NewFactor as Double)

MBS Overlay Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

49.20 class TabPanel

49.20.1 class TabPanel

Platform: macOS, Targets: Desktop only.

Function: Extends the TabPanel control inside Xojo.

49.20.2 Methods

49.20.3 NSTabViewMBS as NSTabViewMBS

MBS MacCocoa Plugin, Plugin Version: 10.0, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTabViewMBS object for the given control.
Example:

MsgBox TabPanel1.NSTabViewMBS.className

Notes: This way you can manipulate Cocoa controls directly.

49.21 class TextField

49.21.1 class TextField

Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The built in TextField class in Xojo.

49.21.2 Methods

49.21.3 NSTextFieldMBS as NSTextFieldMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextFieldMBS object for the given control.
Notes:

This way you can manipulate Cocoa controls directly.
Seems like Xojo 2011r1 uses a NSTextField, so this method should return an object on Cocoa targets.

49.21.4 NSTextViewMBS as NSTextViewMBS

MBS MacCocoa Plugin, Plugin Version: 10.0, Platform: macOS, Targets: Desktop only.

Function: Creates a NSTextViewMBS object for the given control.
Notes:

This way you can manipulate Cocoa controls directly.
Seems like Xojo 2011r1 uses a NSTextField, so this method should return nil on Cocoa targets. Please use NSTextFieldMBS method in this case.

49.21.5 SetTextThreadSafeMBS(text as string)

MBS Util Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets text property on main thread.
Notes:

This method is to allow you to set the text property of a label in a thread without a problem.

If called on main thread, the plugin will simply set text property directly.
If called on other threads the plugin will schedule to set the property a short time later on the main thread.

It may be better to call an update method you created on your window with CallDelegatesMBS.CallDelegateOnMainThreadMBS instead to do several update steps on one.

Chapter 50

CoreAnimation

50.1 class CALayerMBS

50.1.1 class CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The plugin class for a CoreAnimation.
Example:

```
// add gray layer over Xojo window. Or hide it on second call, show on third call, etc...

If view = Nil Then
// view is property in window/module

Dim win As NSWindowMBS = Self.NSWindowMBS

view = New NSViewMBS(0, 0, Width, Height)

win.contentView.AddSubView(view)

view.wantsLayer = True
view.autoresizesSubviews = True
view.autoresizingMask = view.NSViewWidthSizable + view.NSViewHeightSizable

Dim layer As CALayerMBS = view.layer
layer.backgroundColor = CGColorMBS.CreateDeviceGray(0.3, 0.5)

Else

// show or hide
view.isHidden = Not view.isHidden
```

End If

Notes:

The CALayer class manages image-based content and allows you to perform animations on that content. Layers are often used to provide the backing store for views but can also be used without a view to display content. A layer's main job is to manage the visual content that you provide but the layer itself has visual attributes that can be set, such as a background color, border, and shadow. In addition to managing visual content, the layer also maintains information about the geometry of its content (such as its position, size, and transform) that is used to present that content onscreen. Modifying the properties of the layer is how you initiate animations on the layer's content or geometry. A layer object encapsulates the duration and pacing of a layer and its animations by adopting the CAMediaTiming protocol, which defines the layer's timing information.

If the layer object was created by a view, the view typically assigns itself as the layer's delegate automatically, and you should not change that relationship. For layers you create yourself, you can assign a delegate object and use that object to provide the contents of the layer dynamically and perform other tasks. A layer may also have a layout manager object (assigned to the layoutManager property) to manage the layout of subviews separately.

Available in OS X v10.5 and later.

50.1.4 Methods

50.1.5 addSublayer(layer as CALayerMBS)

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Appends the layer to the layer's list of sublayers.
Notes: If the array in the sublayers property is nil, calling this method creates an array for that property and adds the specified layer to it.

50.1.6 available as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns true if CALayer is available.
Notes: True on Mac and False on Windows/Linux.

50.1.7 Constructor

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Initializes the layer.
Notes: Available in OS X v10.5 and later.

50.1.8 display

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Reloads the content of this layer.
Notes:

Do not call this method directly. The layer calls this method at appropriate times to update the layer's content. If the layer has a delegate object, this method attempts to call the delegate's Configuring the Layer's

Rendering Behavior method, which the delegate can use to update the layer's contents. If the delegate does not implement the Configuring the Layer's Rendering Behavior method, this method creates a backing store and calls the layer's drawInContext: method to fill that backing store with content. The new backing store replaces the previous contents of the layer.

Subclasses can override this method and use it to set the layer's contents property directly. You might do this if your custom layer subclass handles layer updates differently.

50.1.9 displayIfNeeded

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Initiates the update process for a layer if it is currently marked as needing an update.
Notes:

You can call this method as needed to force an update to your layer's contents outside of the normal update cycle. Doing so is generally not needed, though. The preferred way to update a layer is to call setNeedsDisplay and let the system update the layer during the next cycle.
Available in OS X v10.6 and later.

50.1.10 layer as CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates and returns an instance of the layer object.
Notes:

Returns the initialized layer object or nil if initialization was not successful.
If you subclass CALayer, you may override this method and use it to provide an instance of your specific subclass.

50.1.11 layerFromHandle(Handle as Integer) as CALayerMBS

MBS MacCG Plugin, Plugin Version: 21.0, Platforms: macOS, iOS, Targets: All.

Function: Returns a new MBS layer object for the given handle.
Notes:

Handle must be pointing to a CALayer, UIView or NSView.
Returns nil in case of an error.
See also:

- 50.1.12 layerFromHandle(Handle as Ptr) as CALayerMBS

50.1.12 layerFromHandle(Handle as Ptr) as CALayerMBS

MBS MacCG Plugin, Plugin Version: 21.0, Platforms: macOS, iOS, Targets: All.

Function: Returns a new MBS layer object for the given handle.
Notes:

Handle must be pointing to a CALayer, UIView or NSView.
Returns nil in case of an error.
See also:

- 50.1.11 layerFromHandle(Handle as Integer) as CALayerMBS 9886

50.1.13 layoutIfNeeded

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Recalculate the receiver's layout, if required.
Notes: When this message is received, the layer's super layers are traversed until a ancestor layer is found that does not require layout. Then layout is performed on the entire layer-tree beneath that ancestor.

50.1.14 layoutSublayers

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Tells the layer to update its layout.
Notes:

Subclasses can override this method and use it to implement their own layout algorithm. Your implementation must set the frame of each sublayer managed by the receiver.

The default implementation of this method calls the layoutSublayersOfLayer method of the layer's delegate object. If there is no delegate object, or the delegate does not implement that method, this method calls the layoutSublayersOfLayer method of the object in the layoutManager property.

50.1.15 removeAllAnimations

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Remove all animations attached to the layer.

50.1.16 removeFromSuperlayer

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Detaches the layer from its parent layer.
Notes:

You can use this method to remove a layer (and all of its sublayers) from a layer hierarchy. This method updates both the superlayer's list of sublayers and sets this layer's superlayer property to nil.
Available in OS X v10.5 and later.

50.1.17 renderInContext(CGContextHandle as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: Renders content of CALayer into given CGContext.
Notes:

Renders the receiver and its sublayers into the specified context.
This method renders directly from the layer tree, ignoring any animations added to the render tree. Renders in the coordinate space of the layer.

Returns true if plugin called render command, so layer can draw itself.
Not all layers support drawing into context.

50.1.18 renderInPicture(Pic as Picture) as boolean

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Renders content of CALayer into given Picture.
Notes:

Renders the receiver and its sublayers into the specified context.
This method renders directly from the layer tree, ignoring any animations added to the render tree. Renders in the coordinate space of the layer.

Returns true if plugin called render command, so layer can draw itself.
Not all layers support drawing into context.

50.1.19 setNeedsDisplay

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Marks the layer's contents as needing to be updated.
Notes:

Calling this method causes the layer to recache its content. This results in the layer potentially calling either the displayLayer or drawLayer:inContext method of its delegate. The existing content in the layer's contents property is removed to make way for the new content.

Available in OS X v10.5 and later.

50.1.20 setNeedsDisplayInRect(r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Marks the region within the specified rectangle as needing to be updated.
Notes:

r: The rectangular region of the layer to mark as invalid. You must specify this rectangle in the layer's own coordinate system.
Available in OS X v10.5 and later.

50.1.21 setNeedsLayout

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Invalidates the layer's layout and marks it as needing an update.
Notes:

You can call this method to indicate that the layout of a layer's sublayers has changed and must be updated. The system typically calls this method automatically when the layer's bounds change or when sublayers are added or removed. In OS X, if your layer's layoutManager property contains an object that implements the invalidateLayoutOfLayer method, that method is called too.

During the next update cycle, the system calls the layoutSublayers method of any layers requiring layout updates.
Available in OS X v10.5 and later.

50.1.22 sublayers as CALayerMBS()

MBS MacCG Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: The array with sublayers.

50.1.23 Properties

50.1.24 affineTransform as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The affine version of the layer's transform..
Notes:

The affine transform structure that corresponds to the value in the layer's transform property.
(Read and Write property)

50.1.25 anchorPoint as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Defines the anchor point of the layer's bounds rectangle. Animatable.
Notes:

You specify the value for this property using the unit coordinate space. The default value of this property is (0.5, 0.5), which represents the center of the layer's bounds rectangle. All geometric manipulations to the view occur about the specified point. For example, applying a rotation transform to a layer with the default anchor point causes the layer to rotate around its center. Changing the anchor point to a different location would cause the layer to rotate around that new point.

For more information about the relationship between the frame, bounds, anchorPoint and position properties, see Core Animation Programming Guide.
Available in OS X v10.5 and later.
(Read and Write property)

50.1.26 anchorPointZ as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The anchor point for the layer's position along the z axis. Animatable.
Notes:

This property specifies the anchor point on the z axis around which geometric manipulations occur. The point is expressed as a distance (measured in points) along the z axis. The default value of this property is 0.
Available in OS X v10.6 and later.
(Read and Write property)

50.1.27 AutoresizingMask as Integer

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A bitmask defining how the layer is resized when the bounds of its superlayer changes.
Notes:

If your app does not use a layout manager or constraints to handle layout changes, you can assign a value to this property to adjust the layer's size in response to changes in the superlayer's bounds. For a list of possible values, see "Autoresizing Mask".

The default value of this property is kCALayerNotSizable.
(Read and Write property)

50.1.28 backgroundColor as Variant

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The background color of the receiver. Animatable.
Notes:

Value must be a CGColorMBS.
The default value of this property is nil.

The value of this property is retained using the Core Foundation retain/release semantics. This behavior occurs despite the fact that the property declaration appears to use the default assign semantics for object retention.
(Read and Write property)

50.1.29 borderColor as Variant

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The color of the layer's border. Animatable.
Notes:

Value must be a CGColorMBS.
The default value of this property is an opaque black color.

The value of this property is retained using the Core Foundation retain/release semantics. This behavior occurs despite the fact that the property declaration appears to use the default assign semantics for object retention.
(Read and Write property)

50.1.30 borderWidth as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The width of the layer's border. Animatable.
Notes:

When this value is greater than 0.0, the layer draws a border using the current borderColor value. The border is drawn inset from the receiver's bounds by the value specified in this property. It is composited above the receiver's contents and sublayers and includes the effects of the cornerRadius property.

The default value of this property is 0.0.
(Read and Write property)

50.1.31 bounds as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The layer's bounds rectangle. Animatable.
Notes:

The bounds rectangle is the origin and size of the layer in its own coordinate space. When you create a new standalone layer, the default value for this property is an empty rectangle, which you must change before using the layer. The values of each coordinate in the rectangle are measured in points.

For more information about the relationship between the frame, bounds, anchorPoint and position properties, see Core Animation Programming Guide.
(Read and Write property)

50.1.32 className as string

MBS MacCG Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: The class name of the layer.
Notes:

Useful for debugging.
(Read only property)

50.1.33 classPath as string

MBS MacCG Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

Function: The path of this layer class.
Notes:

Useful for debugging to know what super classes the layer has.
(Read only property)

50.1.34 contents as Variant

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The contents of the layer.
Notes:

Currently only CGImageMBS is allowed.
(Read and Write property)

50.1.35 contentsCenter as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The rectangle that defines how the layer contents are scaled during a resizing operation. Animatable.
Notes:

You can use this property to subdivide the layer's content into a 3x3 grid. The value in this property specifies the location and size of the center rectangle in that grid. If the layer's contentsGravity property is set to one of the resizing modes, resizing the layer causes scaling to occur differently in each rectangle of the grid. The center rectangle is stretched in both dimensions, the top-center and bottom-center rectangles are stretched only horizontally, the left-center and right-center rectangles are stretched only vertically, and the four corner rectangles are not stretched at all. Therefore, you can use this technique to implement stretchable backgrounds or images using a three-part or nine-part image.

The value in this property is set to the unit rectangle (0.0,0.0) (1.0,1.0) by default, which causes the entire image to scale in both dimensions. If you specify a rectangle that extends outside the unit rectangle, the result is undefined. The rectangle you specify is applied only after the contentsRect property has been applied to the image.

Note: If the width or height of the rectangle in this property is very small or 0, the value is implicitly changed to the width or height of a single source pixel centered at the specified location.
(Read and Write property)

50.1.36 contentsRect as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The rectangle, in the unit coordinate space, that defines the portion of the layer's contents that should be used. Animatable.
Notes:

Defaults to the unit rectangle (0.0, 0.0, 1.0, 1.0).
If pixels outside the unit rectangle are requested, the edge pixels of the contents image will be extended outwards.
If an empty rectangle is provided, the results are undefined.
(Read and Write property)

50.1.37 contentsScale as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The scale factor applied to the layer.
Notes:

This value defines the mapping between the logical coordinate space of the layer (measured in points) and the physical coordinate space (measured in pixels). Higher scale factors indicate that each point in the layer is represented by more than one pixel at render time. For example, if the scale factor is 2.0 and the layer's bounds are 50 x 50 points, the size of the bitmap used to present the layer's content is 100 x 100 pixels.

The default value of this property is 1.0. For layers attached to a view, the view changes the scale factor automatically to a value that is appropriate for the current screen. For layers you create and manage yourself, you must set the value of this property yourself based on the resolution of the screen and the content you are providing. Core Animation uses the value you specify as a cue to determine how to render your content.

Available in OS X v10.7 and later.
(Read and Write property)

50.1.38 cornerRadius as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The radius to use when drawing rounded corners for the layer's background. Animatable.
Notes:

Setting the radius to a value greater than 0.0 causes the layer to begin drawing rounded corners on its background. By default, the corner radius does not apply to the image in the layer's contents property; it applies only to the background color and border of the layer. However, setting the masksToBounds property to true causes the content to be clipped to the rounded corners.

The default value of this property is 0.0.
(Read and Write property)

50.1.39 DoubleSided as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean indicating whether the layer displays its content when facing away from the viewer. Animatable.
Notes:

When the value in this property is false, the layer hides its content when it faces away from the viewer. The default value of this property is true.
Available in OS X v10.5 and later.
(Read and Write property)

50.1.40 drawsAsynchronously as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean indicating whether drawing commands are deferred and processed asynchronously in a background thread.
Notes:

When this property is set to true, the graphics context used to draw the layer's contents queues drawing commands and executes them on a background thread rather than executing them synchronously. Performing these commands asynchronously can improve performance in some apps. However, you should always measure the actual performance benefits before enabling this capability.

The default value for this property is false.
Available in OS X v10.8 and later.
(Read and Write property)

50.1.41 frame as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The layer's frame rectangle.
Notes:

The frame rectangle is position and size of the layer specified in the superlayer's coordinate space. For layers, the frame rectangle is a computed property that is derived from the values in the bounds, anchorPoint and

position properties. When you assign a new value to this property, the layer changes its position and bounds properties to match the rectangle you specified. The values of each coordinate in the rectangle are measured in points.

For more information about the relationship between the frame, bounds, anchorPoint and position properties, see Core Animation Programming Guide.

Note: The frame property is not directly animatable. Instead you should animate the appropriate combination of the bounds, anchorPoint and position properties to achieve the desired result.
(Read and Write property)

50.1.42 Handle as Integer

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The internal reference to the layer.
Notes: (Read and Write property)

50.1.43 Hidden as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean indicating whether the layer is displayed. Animatable.
Notes:

The default value of this property is false.
(Read and Write property)

50.1.44 mask as CALayerMBS

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The layer to be used as mask for this layer.
Notes:

A layer whose alpha channel is used as a mask to select between the layer's background and the result of compositing the layer's contents with its filtered background. Defaults to nil. When used as a mask the layer's 'compositingFilter' and 'backgroundFilters' properties are ignored. When setting the mask to a new layer, the new layer must have a nil superlayer, otherwise the behavior is undefined. Nested masks (mask layers with their own masks) are unsupported.
(Read and Write property)

50.1.45 masksToBounds as Boolean

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Whether to mask by bounds.
Notes:

When true an implicit mask matching the layer bounds is applied to the layer (including the effects of the 'cornerRadius' property). If both 'mask' and 'masksToBounds' are non-nil the two masks are multiplied to get the actual mask values. Defaults to false. Animatable.
(Read and Write property)

50.1.46 minificationFilterBias as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The bias factor used by the minification filter to determine the levels of detail.
Notes:

This value is used by the minificationFilter when it is set to kCAFilterTrilinear.
The default value of this property is 0.0.
Available in OS X v10.6 and later.
(Read and Write property)

50.1.47 modelLayer as CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns the model layer object associated with the receiver, if any.
Notes:

Calling this method on a layer in the presentation tree returns the corresponding layer object in the model tree. This method returns a value only when a transaction involving changes to the presentation layer is in progress. If no transaction is in progress, the results of calling this method are undefined.

Available in OS X v10.5 and later.
(Read only property)

50.1.48 needsDisplay as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns a Boolean indicating whether the layer has been marked as needing an update.
Notes:

True if the layer needs to be updated.
Available in OS X v10.6 and later.
(Read only property)

50.1.49 needsDisplayOnBoundsChange as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean indicating whether the layer contents must be updated when its bounds rectangle changes.
Notes:

When this property is set to true, the layer automatically calls its setNeedsDisplay method whenever its bounds property changes. The default value of this property is false.
(Read and Write property)

50.1.50 needsLayout as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns a Boolean indicating whether the layer has been marked as needing a layout update.
Notes:

True if the layer has been marked as requiring a layout update.
Available in OS X v10.6 and later.
(Read only property)

50.1.51 opacity as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The opacity of the receiver. Animatable.
Notes:

The value of this property must be in the range 0.0 (transparent) to 1.0 (opaque). Values outside that range are clamped to the minimum or maximum. The default value of this property is 1.0.
(Read and Write property)

50.1.52 Opaque as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the layer contains completely opaque content.
Notes:

The default value of this property is false. If your app draws completely opaque content that fills the layer's bounds, setting this property to true lets the system optimize the rendering behavior for the layer. Specifically, when the layer creates the backing store for your drawing commands, Core Animation omits the alpha channel of that backing store. Doing so can improve the performance of compositing operations. If you set the value of this property to true, you must fill the layer's bounds with opaque content.

Setting this property affects only the backing store managed by Core Animation. If you assign an image with an alpha channel to the layer's contents property, that image retains its alpha channel regardless of the value of this property.
(Read and Write property)

50.1.53 position as CGRectMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The layer's position in its superlayer's coordinate space. Animatable.
Notes:

The value of this property is specified in points and is always specified relative to the value in the anchorPoint property. For new standalone layers, the default position is set to (0.0, 0.0). Changing the frame property also updates the value in this property.

For more information about the relationship between the frame, bounds, anchorPoint and position properties, see Core Animation Programming Guide.
(Read and Write property)

50.1.54 preferredFrameSize as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns the preferred size of the layer in the coordinate space of its superlayer.
Notes:

In OS X, the default implementation of this method calls the preferredSizeOfLayer method of its layout manager—that is, the object in its layoutManager property. If that object does not exist or does not implement that method, this method returns the size of the layer's current bounds rectangle mapped into the coordinate space of its superlayer.
(Read only property)

50.1.55 presentationLayer as CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns a copy of the presentation layer object that represents the state of the layer as it currently appears onscreen.
Notes:

The layer object returned by this method provides a close approximation of the layer that is currently being displayed onscreen. While an animation is in progress, you can retrieve this object and use it to get the current values for those animations.

The sublayers, mask, and superlayer properties of the returned layer return the corresponding objects from the presentation tree (not the model tree). This pattern also applies to any read-only layer methods. For example, the hitTest: method of the returned object queries the layer objects in the presentation tree.

Available in OS X v10.5 and later.
(Read only property)

50.1.56 rasterizationScale as Double

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The scale at which the layer will be rasterized.
Notes:

(when the shouldRasterize property has been set to true) relative to the coordinate space of the layer. Defaults to one. Animatable.
(Read and Write property)

50.1.57 shadowColor as Variant

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The color of the layer's shadow. Animatable.
Notes:

The default value of this property is an opaque black color.

The value of this property is retained using the Core Foundation retain/release semantics. This behavior occurs despite the fact that the property declaration appears to use the default assign semantics for object retention.

Value is a CGColorMBS object.

(Read and Write property)

50.1.58 shadowOffset as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The offset (in points) of the layer's shadow. Animatable.
Notes:

The default value of this property is (0.0, -3.0).
(Read and Write property)

50.1.59 shadowOpacity as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The opacity of the layer's shadow. Animatable.
Notes:

The value in this property must be in the range 0.0 (transparent) to 1.0 (opaque). The default value of this property is 0.0.
Available in OS X v10.5 and later.
(Read and Write property)

50.1.60 shadowPath as Variant

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The shadow path.
Notes:

Value is a CGPathMBS object.

The default value of this property is nil, which causes the layer to use a standard shadow shape. If you specify a value for this property, the layer creates its shadow using the specified path instead of the layer's composited alpha channel. The path you provide defines the outline of the shadow. It is filled using the non-zero winding rule and the current shadow color, opacity, and blur radius.

Unlike most animatable properties, this property (as with all CGPathRef animatable properties) does not support implicit animation. However, the path object may be animated using any of the concrete subclasses of CAPropertyAnimation. Paths will interpolate as a linear blend of the "on-line" points; "off-line" points may be interpolated non-linearly (to preserve continuity of the curve's derivative). If the two paths have a different number of control points or segments, the results are undefined. If the path extends outside the

layer bounds it will not automatically be clipped to the layer, only if the normal layer masking rules cause that.

Specifying an explicit path usually improves rendering performance.

The value of this property is retained using the Core Foundation retain/release semantics. This behavior occurs despite the fact that the property declaration appears to use the default assign semantics for object retention.
(Read and Write property)

50.1.61 shadowRadius as Double

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The blur radius (in points) used to render the layer's shadow. Animatable.
Notes:

You specify the radius The default value of this property is 3.0.
(Read and Write property)

50.1.62 shouldRasterize as Boolean

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Whether view should raster.
Notes:

When true, the layer is rendered as a bitmap in its local coordinate space ("rasterized"), then the bitmap is composited into the destination (with the minificationFilter and magnificationFilter properties of the layer applied if the bitmap needs scaling). Rasterization occurs after the layer's filters and shadow effects are applied, but before the opacity modulation. As an implementation detail the rendering engine may attempt to cache and reuse the bitmap from one frame to the next. (Whether it does or not will have no affect on the rendered output.) When false the layer is composited directly into the destination whenever possible (however, certain features of the compositing model may force rasterization, e.g. adding filters). Defaults to false. Animatable.
(Read and Write property)

50.1.63 superlayer as CALayerMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The superlayer of the layer.
Notes:

The superlayer manages the layout of its sublayers.
Available in OS X v10.5 and later.
(Read only property)

50.1.64 zPosition as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The layer's position on the z axis. Animatable.
Notes:

The default value of this property is 0. Changing the value of this property changes the the front-to-back ordering of layers onscreen. This can affect the visibility of layers whose frame rectangles overlap.

The value of this property is measured in points.
Available in OS X v10.5 and later.
(Read and Write property)

50.1.65 Constants

50.1.66 kCALayerBottomEdge = 4

MBS MacCG Plugin, Plugin Version: 13.1.

Function: Edge constants for edgeAntialiasingMask property.
Notes: Specifies that the bottom edge of the receiver's content should be antialiased.

50.1.67 kCALayerHeightSizable = 16

MBS MacCG Plugin, Plugin Version: 13.1.

Function: One of the constants for the autoresizingmask property.
Notes: The receiver's height is flexible.

50.1.68 kCALayerLeftEdge = 1

MBS MacCG Plugin, Plugin Version: 13.1.

Function: Edge constants for edgeAntialiasingMask property.
Notes: Specifies that the left edge of the receiver's content should be antialiased.

50.1.69 kCALayerMaxXMargin = 4

MBS MacCG Plugin, Plugin Version: 13.1.

Function: One of the constants for the autoresizingmask property.
Notes: The left margin between the receiver and its superview is flexible.

50.1.70 kCALayerMaxYMargin = 32

MBS MacCG Plugin, Plugin Version: 13.1.

Function: One of the constants for the autoresizingmask property.
Notes: The top margin between the receiver and its superview is flexible.

50.1.71 kCALayerMinXMargin = 1

MBS MacCG Plugin, Plugin Version: 13.1.

Function: One of the constants for the autoresizingmask property.
Notes: The left margin between the receiver and its superview is flexible.

50.1.72 kCALayerMinYMargin = 8

MBS MacCG Plugin, Plugin Version: 13.1.

Function: One of the constants for the autoresizingmask property.
Notes: The top margin between the receiver and its superview is flexible.

50.1.73 kCALayerNotSizable = 0

MBS MacCG Plugin, Plugin Version: 13.1.

Function: One of the constants for the autoresizingmask property.
Notes: The receiver cannot be resized.

50.1.74 kCALayerRightEdge = 2

MBS MacCG Plugin, Plugin Version: 13.1.

Function: Edge constants for edgeAntialiasingMask property.
Notes: Specifies that the right edge of the receiver's content should be antialiased.

50.1.75 kCALayerTopEdge = 8

MBS MacCG Plugin, Plugin Version: 13.1.

Function: Edge constants for edgeAntialiasingMask property.
Notes: Specifies that the top edge of the receiver's content should be antialiased.

50.1.76 kCALayerWidthSizable = 2

MBS MacCG Plugin, Plugin Version: 13.1.

Function: One of the constants for the autoresizingmask property.
Notes: The receiver's width is flexible.

50.2 class CATextLayerMBS

50.2.1 class CATextLayerMBS

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The text layer provides simple text layout and rendering of plain or attributed strings.
Notes:

The first line is aligned to the top of the layer.
Subclass of the CALayerMBS class.

50.2.6 Methods

50.2.7 Constructor

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The constructor.

50.2.8 kCAAlignmentCenter as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for alignment.

50.2.9 kCAAlignmentJustified as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for alignment.

50.2.10 kCAAlignmentLeft as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for alignment.

50.2.11 kCAAlignmentNatural as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for alignment.

50.2.12 kCAAlignmentRight as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for alignment.

50.2.13 kCATruncationEnd as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for truncation.

50.2.14 kCATruncationMiddle as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for truncation.

50.2.15 kCATruncationNone as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for truncation.

50.2.16 kCATruncationStart as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: One of the modes for truncation.

50.2.17 Properties

50.2.18 alignmentMode as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Describes how individual lines of text are aligned within the layer bounds.
Notes:

The possible options are 'natural', 'left', 'right', 'center' and 'justified'. Defaults to 'natural'.
(Read and Write property)

50.2.19 allowsFontSubpixelQuantization as Boolean

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Sets allowsFontSubpixelQuantization parameter of CGContextMBS passed to the drawInContext method.
Notes:

Defaults to false.
(Read and Write property)

50.2.20 font as Variant

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The font to use.
Notes:

May be either a CTFontMBS, NSFontMBS, CGFontMBS, or a string naming the font.
Defaults to the Helvetica font. Only used when the 'string' property is not an NSAttributedStringMBS object.
(Read and Write property)

50.2.21 fontSize as Double

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The font size.
Notes:

Defaults to 36. Only used when the 'string' property is not an NSAttributedStringMBS. Animatable (Mac OS X 10.6 and later.)
(Read and Write property)

50.2.22 foregroundColor as Variant

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The color object used to draw the text.
Notes:

Defaults to opaque white.
Only used when the 'string' property is not an NSAttributedStringMBS object.
Animatable (Mac OS X 10.6 and later.)
(Read and Write property)

50.2.23 String as Variant

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: The text to be rendered, should be either a string or an NSAttributedString.
Notes:

Defaults to nil.
(Read and Write property)

50.2.24 truncationMode as String

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Describes how the string is truncated to fit within the layer bounds.
Notes:

The possible options are 'none', 'start', 'middle' and 'end'. Defaults to 'none'.
(Read and Write property)

50.2.25 Wrapped as Boolean

MBS MacCG Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: When true the string is wrapped to fit within the layer bounds.
Notes:

Defaults to false.
(Read and Write property)

50.3 class CATransactionMBS

50.3.1 class CATransactionMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The plugin class for a CoreAnimation transaction.
Notes:

CATransaction is the Core Animation mechanism for batching multiple layer-tree operations into atomic updates to the render tree. Every modification to a layer tree must be part of a transaction. Nested transactions are supported.

Core Animation supports two types of transactions: implicit transactions and explicit transactions. Implicit transactions are created automatically when the layer tree is modified by a thread without an active transaction and are committed automatically when the thread's run-loop next iterates. Explicit transactions occur when the the application sends the CATransaction class a begin message before modifying the layer tree, and a commit message afterwards.

CATransaction allows you to override default animation properties that are set for animatable properties. You can customize duration, timing function, whether changes to properties trigger animations, and provide a handler that informs you when all animations from the transaction group are completed.

During a transaction you can temporarily acquire a recursive spin-lock for managing property atomicity.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

50.3.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

50.3.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

50.3.4 Methods

50.3.5 animationDuration as Double

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns the animation duration used by all animations within this transaction group.

50.3.6 available as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns true if transaction class is available.
Notes: Returns true on Mac and false on Linux/Windows.

50.3.7 begin

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Begin a new transaction for the current thread.
Notes:

The transaction is nested within the thread's current transaction, if there is one.
Available in OS X v10.5 and later.

50.3.8 commit

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Commit all changes made during the current transaction.
Notes:

Raises an exception if no current transaction exists.
Available in OS X v10.5 and later.

50.3.9 Constructor

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The private constructor.

50.3.10 flush

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Flushes any extant implicit transaction.
Notes:

Delays the commit until any nested explicit transactions have completed.

Flush is typically called automatically at the end of the current runloop, regardless of the runloop mode. If your application does not have a runloop, you must call this method explicitly.

However, you should attempt to avoid calling flush explicitly. By allowing flush to execute during the runloop your application will achieve better performance, atomic screen updates will be preserved, and transactions and animations that work from transaction to transaction will continue to function.

Available in OS X v10.5 and later.

50.3.11 kCATransactionAnimationDuration as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keys for values of a transaction.
Notes:

Duration, in seconds, for animations triggered within the transaction group. The value for this key must be a number.
Available in OS X v10.5 and later.

50.3.12 kCATransactionDisableActions as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keys for values of a transaction.
Notes:

If true, implicit actions for property changes made within the transaction group are suppressed. The value for this key must be a boolean.
Available in OS X v10.5 and later.

50.3.13 setAnimationDuration(value as Double)

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Sets the animation duration used by all animations within this transaction group.
Notes: Available in OS X v10.6 and later.

50.3.14 setValue(value as Variant, key as string)

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Sets the arbitrary keyed-data for the specified key.
Notes:

value: The value for the key identified by key.
key: The name of one of the receiver's properties.

Nested transactions have nested data scope; setting a key always sets it in the innermost scope.
Available in OS X v10.5 and later.

50.3.15 valueForKey(key as string) as Variant

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns the arbitrary keyed-data specified by the given key.
Notes:

key: The name of one of the receiver's properties.

Returns the value for the data specified by the key.
Nested transactions have nested data scope. Requesting a value for a key first searches the innermost scope, then the enclosing transactions.
Available in OS X v10.5 and later.

50.3.16 Properties

50.3.17 Handle as Integer

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The internal transaction handle.
Notes: (Read and Write property)

Chapter 51

CoreAudio

51.1 class AudioPlayThruMBS

51.1.1 class AudioPlayThruMBS

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to do active play through on Mac OS X using CoreAudio.
Notes: Requires Mac OS X 10.4.

51.1.2 Blog Entries

- MBS Real Studio Plugins, version 13.0pr3

51.1.3 Blog Entries

- MBS Real Studio Plugins, version 13.0pr3

51.1.4 Methods

51.1.5 Constructor

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
Example:

```
dim a as AudioPlayThruMBS
a=new AudioPlayThruMBS
```

Notes:

Does nothing.
Only useful if you want to create an object, set the buffersize and call Init after that.
See also:

- 51.1.6 Constructor(InputDeviceID as Integer, OutputDeviceID as Integer, BufferSizeWish as Integer = 0) 9916

51.1.6 Constructor(InputDeviceID as Integer, OutputDeviceID as Integer, BufferSizeWish as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
Example:

```
dim InputDeviceID,OutputDeviceID as Integer
// get device IDs
dim a as AudioPlayThruMBS

a=new AudioPlayThruMBS(InputDeviceID, OutputDeviceID)
```

Notes:

Calls Init method behind scenes with default buffer size.
Lasterror is set.
Device IDs are the IDs you get in the CoreAudio classes.
BufferSizeWish is the buffer size you prefer to use. If value is too small the default value will be used.
See also:

- 51.1.5 Constructor 9915

51.1.7 Init(InputDeviceID as Integer, OutputDeviceID as Integer, BufferSizeWish as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the engine behind this class.
Example:

```
dim InputDeviceID as Integer
dim OutputDeviceID as Integer
```

```
// get device IDs

dim a as AudioPlayThruMBS
a=new AudioPlayThruMBS
a.Init(InputDeviceID, OutputDeviceID)
```

Notes:

Lasterror is set.
Device IDs are the IDs you get in the CoreAudio classes.
Can be used to set the buffersize before calling this method.

51.1.8 IsRunning as boolean

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether playthrough is active.

51.1.9 SetInputDeviceAsCurrent(DeviceID as Integer)

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets input device.
Notes: Device IDs are the IDs you get in the CoreAudio classes.

51.1.10 SetOutputDeviceAsCurrent(DeviceID as Integer)

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets output device.
Notes:

Lasterror is set.
Device IDs are the IDs you get in the CoreAudio classes.

51.1.11 Start

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Starts playing.

Notes: Lasterror is set.

51.1.12 Stop

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Stops playing.
Notes: Lasterror is set.

51.1.13 Properties

51.1.14 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code reported.
Notes:

0 for success. -1 in case function is not available.
(Read and Write property)

51.1.15 Volume as Double

MBS MacOSX Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get or set the volume of the output audio unit.
Notes:

Lasterror is set.
Range is from 0.0 to 1.0.
(Read and Write computed property)

Chapter 52

CoreFoundation

52.1 Globals

52.1.1 NewCFObjectMBSFromXML(XMLdata as MemoryBlock) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Notes:

Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.
See also:

- 52.1.2 NewCFObjectMBSFromXML(XMLdata as String) as CFObjectMBS 9919

52.1.2 NewCFObjectMBSFromXML(XMLdata as String) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Notes:

Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.
See also:

- 52.1.1 NewCFObjectMBSFromXML(XMLdata as MemoryBlock) as CFObjectMBS 9919

52.1.3 NewCFStringMBS2(s as string) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns a CFStringMBS object created using the given string.
Example:

```
dim s as CFStringMBS

s=NewCFStringMBS2("")
// s is not nil here
MsgBox str(s.Handle)
```

Notes:

The cfstring may be unicode.
See also NewCFStringMBS.

52.1.4 kCFCharacterSetMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFCharacterSetMBS object.

52.1.5 NewCFObjectMBSFromXMLMT(data as string) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Notes:

Same as NewCFObjectMBSFromXML, but with additional multithreading.

Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 52.1.6 NewCFObjectMBSFromXMLMT(file as folderitem) as CFObjectMBS 9921
- 52.1.7 NewCFObjectMBSFromXMLMT(XMLdata as CFBinaryDataMBS) as CFObjectMBS 9921

52.1.6 NewCFObjectMBSFromXMLMT(file as folderitem) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.xml")
dim o as CFObjectMBS = NewCFObjectMBSFromXMLMT(f)

if o = nil then
MsgBox "Error"
else
MsgBox "OK"
end if
```

Notes:

Same as NewCFObjectMBSFromXML, but with additional multithreading.

Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 52.1.5 NewCFObjectMBSFromXMLMT(data as string) as CFObjectMBS 9920
- 52.1.7 NewCFObjectMBSFromXMLMT(XMLdata as CFBinaryDataMBS) as CFObjectMBS 9921

52.1.7 NewCFObjectMBSFromXMLMT(XMLdata as CFBinaryDataMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Notes:

Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will

block, but keep other background threads running.
See also:

- 52.1.5 NewCFObjectMBSFromXMLMT(data as string) as CFObjectMBS 9920
- 52.1.6 NewCFObjectMBSFromXMLMT(file as folderitem) as CFObjectMBS 9921

52.1.8 kCFTreeMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the type ID for the CFTree class.

52.1.9 NewCFTreeMBS as CFTreeMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a new CFTree object.
Notes: Returns nil on any error.

52.1.10 kCFXMLNodeMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the type ID for the XMLNode class.

52.1.11 kCFXMLParserMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the type ID for the XMLParser class.

52.1.12 UseMBSCFXMLPlugin

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Forces RB to include the CF XML Plugin in the compiled application.
Notes:

If a plugin is using the CF XML Plugin, but you don't use it the application will crash on launching because of a missing plugin. To fix this, call this function somewhere in your application.

Xojo 5.2 has this bug fixed.

52.1.13 CFShowCFStringMBS(cfstring as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Prints the content of the given CFString to the console.

52.1.14 Blog Entries

- MBS Real Studio Plugins, version 12.4pr3

52.1.15 CFShowMBS(cfobject as CFObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Prints the content of the given CFObject to the console.
Notes: Very useful for e.g. CFDictionarys.

52.1.16 Blog Entries

- MBS Real Studio Plugins, version 12.4pr3

52.1.17 CreateBundleMBS(file as folderitem) as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates a CFBundle object for the bundle folder on the given position.
Example:

```
// Find and show the main executable file of a bundled application

dim f as FolderItem

f=SpecialFolder.Applications.Child("Mail.app")
MsgBox f.NativePath // shows app bundle path

dim b as CFBundleMBS
dim u as CFURLMBS

b=CreateBundleMBS(f)
if b<>nil then
```

```
u=b.ExecutableFile
if u<>nil then
MsgBox f.NativePath // shows app executable path
end if
end if
```

Notes: Returns nil on any error.
See also:

- 52.1.18 CreateBundleMBS(url as CFURLMBS) as CFBundleMBS 9924

52.1.18 CreateBundleMBS(url as CFURLMBS) as CFBundleMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a CFBundle object for the bundle folder on the given position.
Example:

```
// Find and show the main executable file of a bundled application

dim f as FolderItem

f=SpecialFolder.Applications.Child("Mail.app")
MsgBox f.NativePath // shows app bundle path

dim b as CFBundleMBS
dim u as CFURLMBS

u=NewCFURLMBSFile(f)
if u<>Nil then
b=CreateBundleMBS(u)
if b<>nil then
u=b.ExecutableFile
if u<>nil then
MsgBox f.NativePath // shows app executable path
end if
end if
end if
```

Notes: Returns nil on any error.
See also:

- 52.1.17 CreateBundleMBS(file as folderitem) as CFBundleMBS 9923

52.1.19 CreateBundlesFromDirectoryMBS(url as CFURLMBS, type as CFStringMBS) as CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all bundles in a folder.
Notes:

Returns nil on any error.

With the Type parameter you can limit the bundles to a certain type.
The abstract type of the bundles you wish to locate and create. The type is expressed as a filename extension, such as bundle. Pass NULL to create CFBundle objects for bundles of any type.

52.1.20 CreateCFTimeZoneMBS(name as CFStringMBS, data as CFBinaryDataMBS) as CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Creates a new timezone object with the given name and data.
Notes: Returns nil on any error.

52.1.21 CreateCFTimeZoneMBSwithName(name as CFStringMBS, TryAbbrev as boolean) as CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Creates a new timezone object with the object from the system which matches the given name.
Notes:

If TryAbbrev is true the system also checks if the name matches the abbreviated name of the timezone object.
Returns nil on any error.

52.1.22 CreateCFTimeZoneMBSwithTimeIntervalFromGMT(time as CFTimeIntervalMBS) as CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Creates a new timezone object with the given time interval.
Notes: Returns nil on any error.

52.1.23 CreateStringByAddingPercentEscapesMBS(original as CFStringMBS,charactersToLeaveEscaped as CFStringMBS,legalURLCharactersToBeEscaped as CFStringMBS,encoding as Integer) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Addes percent escapes inside a string.
Notes: If charactersToLeaveEscaped=nil then no string is changed. If charactersToLeaveEscaped contains an emptry string ("") all escapes are changed and if charactersToLeaveEscaped contains a string<>"" then this characters are not escaped.

52.1.24 CreateStringByReplacingPercentEscapesMBS(original as CFStringMBS,charactersToLeaveEscaped as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces percent escapes inside a string.
Notes: If charactersToLeaveEscaped=nil then no string is changed. If charactersToLeaveEscaped contains an emptry string ("") all escapes are changed and if charactersToLeaveEscaped contains a string<>"" then this characters are not escaped.

52.1.25 CurrentCFAbsoluteTimeMBS as CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The current time as an absolute time object.
Example:

```
// get current timezone
dim c as CFTimeZoneMBS = SystemCFTimeZoneMBS

// and current time
dim time as CFAbsoluteTimeMBS = CurrentCFAbsoluteTimeMBS

// Do we have daylight saving time?
MsgBox str(c.IsDaylightSavingTime(time))
```

Notes: Returns nil on any error.

52.1.26 GetAllBundlesMBS as CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all known bundles on the system.
Notes: Returns nil on any error.

52.1.27 GetBundleWithIdentifierMBS(id as CFStringMBS) as CFBundleMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a CFBundle object for the bundle with the given ID.
Notes:

Returns nil on any error.

Returns only a bundle if that bundle has been loaded before.

For a bundle to be located using its identifier, the bundle object must have already been created. The principal intended purpose for locating bundles by identifier is so that code (in frameworks, plugins, etc.) can find its own bundle. If a bundle is created, then the bundle deleted from the filesystem and this function invoked afterwards, it will still return the original bundle.

52.1.28 GetDefaultCFTimeZoneMBS as CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The default time zone.
Example:

msgBox str(GetDefaultCFTimeZoneMBS.SecondsFromGMT(nil).Value)

Notes: Returns nil on any error.

52.1.29 kCFArrayMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFArrayMBS object.

52.1.30 kCFBagMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFBagMBS object.

52.1.31 kCFBinaryDataMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFBinary object.

52.1.32 kCFBooleanMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFBooleanMBS object.

52.1.33 kCFBundleMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFBundle object.
Notes:

CFBundle objects may be supported in a future version of this plugin.
Request if you need more than the app.bundle functions offer you.

52.1.34 kCFDateMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFDateMBS object.

52.1.35 kCFDictionaryMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFDictionaryMBS object.

52.1.36 kCFNumberMBSNaN as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for NaN (not a number).

52.1.37 kCFNumberMBSNegativeInfinity as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for negative infinity.

52.1.38 kCFNumberMBSPositiveInfinity as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for positive infinity.

52.1.39 kCFNumberMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFNumberMBS object.

52.1.40 kCFSetMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFSetMBS object.

52.1.41 kCFStringMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFStringMBS object.

52.1.42 kCFTimeZoneMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFTimeZone object.

52.1.43 kCFURLMBSTypeID as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFURLMBS object.

52.1.44 KnownTimeZoneNamesAsCFArrayMBS as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: An array of all known time zone names.
Notes: Returns nil on any error.

52.1.45 MacShowAboutBoxMBS(options as CFDictionaryMBS) as Integer

MBS MacCF Plugin, Plugin Version: 9.3, Platform: macOS, Targets: All.

Function: Displays an HI-conformant about box.
Example:

```
dim kHIAboutBoxNameKey as CFStringMBS = NewCFStringMBS("HIAboutBoxName")
dim kHIAboutBoxVersionKey as CFStringMBS = NewCFStringMBS("HIAboutBoxVersion")
dim kHIAboutBoxCopyrightKey as CFStringMBS = NewCFStringMBS("HIAboutBoxCopyright")
dim kHIAboutBoxDescriptionKey as CFStringMBS = NewCFStringMBS("HIAboutBoxDescription")
dim kHIAboutBoxStringFileKey as CFStringMBS = NewCFStringMBS("HIAboutBoxStringFile")

dim d as CFMutableDictionaryMBS

d=NewCFMutableDictionaryMBS

// name, version and copyright are optional:
d.add(kHIAboutBoxNameKey, NewCFStringMBS("MyApp"))
d.add(kHIAboutBoxVersionKey, NewCFStringMBS("1.0"))
d.add(kHIAboutBoxCopyrightKey, NewCFStringMBS("© 2009 by Christian Schmitz"))

// description is needed
d.add(kHIAboutBoxDescriptionKey, NewCFStringMBS("The best application I ever made!"))
```

```
// optional
'd.add(kHIAboutBoxStringFileKey, NewCFStringMBS("somefile"))

MsgBox Str(MacShowAboutBoxMBS(d))
```

Notes:

This about box is a generic about box that automatically can display your application name, version string, and copyright string. It peeks into either the Info.plist (for the CFBundleName, CFBundleVersion, and CFBundleGetInfoString keys) or your bundle resource (not recommended) to get the information by default. You can customize what it displays by passing in various options in the input dictionary. Note that currently the description string can only be specified in the options dictionary; this function does not check your Info.plist for a descriptions string.

There are three basic ways to call this function. First, you can pass nil for inOptions. As mentioned, default information will be displayed. Second, you can pass the actual values for the strings displayed by passing the strings in the inOptions dictionary using the keys provided, such as kHIAboutBoxNameKey. If a replacement string is not passed, the default behavior kicks in. For example, you could pass some variant of your application name in the dictionary, but not pass a replacement version or copyright strings. The Toolbox would display your replacement string, and fall back to looking in the Info.plist for the other strings. The third way to call this is to pass the name of a string file in the dictionary with the key kHIAboutBoxStringFileKey. We will automatically use that file to find the strings for the about box. The keys in the string file should be the same value as the keys you would use to pass into the inOptions dictionary. Again, if a string is not found in that file, we would fall back to looking for a string in the dictionary, and then finally the Info.plist. Certainly this is not the be-all-end-all of about boxes, but it does provide a simple no-work about box for your application. The standard Toolbox application handler now responds to the kHICommandAbout command ID by calling HIAboutBox for you. This means that any Carbon Event-based application will get this behavior for free right out of the box. If you wish for the window to respond to cmd-W in the menu bar, you should make sure that menu item has the kHICommandClose commandID.

Options: A dictionary of replacement strings, or the name of a string file to retrieve the strings from, or nil. See the discussion for how this is used.

Returns a Mac OS error code or -1 if function is not available.
Not supported on 64 bit targets.

52.1.46 Xojo Developer Magazine

- 7.4, page 8: News

52.1.47 NewCFAbsoluteTimeMBS(time as Double) as CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns a new absolute time object with the given value.
Notes: Returns nil on any error.

52.1.48 NewCFBinaryDataMBSMem(mem as memoryblock,len as Integer) as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFBinary object for the given memoryblock.

52.1.49 NewCFBinaryDataMBSStr(s as string) as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFBinary object for the given string.
Example:

```
dim t as TextOutputStream
dim f as FolderItem
dim o as CFObjectMBS
dim s as string
dim i as TextInputStream

f=SpecialFolder.Desktop.Child("test")
o=NewCFStringMBS("Hello")

// write

s=o.XML.str
s=ConvertEncoding(s,Encodings.UTF8)

t=f.CreateTextFile
t.Write s
t.Close

// clear

o=nil

// now read back
```

```
i=f.OpenAsTextFile
s=i.ReadAll(Encodings.UTF8)
i.Close

o=NewCFObjectMBSFromXML(NewCFBinaryDataMBSStr(s))

MsgBox CFStringMBS(o).str
```

52.1.50 NewCFBooleanMBS(value as boolean) as CFBooleanMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFBooleanMBS object created using the given boolean.

52.1.51 NewCFDateMBS as CFDateMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a new emptry CFDateMBS.

52.1.52 NewCFMutableArrayMBS as CFMutableArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new empty mutable array.
Notes: The array's maximum capacity is unlimited (or rather, only limited by address space and available memory constraints).

52.1.53 NewCFMutableBagMBS as CFMutableBagMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a new emptry CFMutableBagMBS.

52.1.54 NewCFMutableBinaryDataMBSMem(len as Integer) as CFMutableBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFMutableBinary object with the given size in bytes.

52.1.55 NewCFMutableDictionaryMBS as CFMutableDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a new emptry CFMutableDictionaryMBS.
Example:

```
dim d as CFMutableDictionaryMBS

d=NewCFMutableDictionaryMBS
d.Add NewCFStringMBS("Key"),NewCFStringMBS("Value")
MsgBox d.XML.str
```

52.1.56 Blog Entries

- MBS Real Studio Plugins, version 11.1pr10

52.1.57 NewCFMutableSetMBS as CFMutableSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a new emptry CFMutableSetMBS.

52.1.58 NewCFNumberMBSDouble(doubleValue as Double) as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for the given double value.

52.1.59 NewCFNumberMBSInteger(integerValue as Integer) as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for the given integer value.

52.1.60 NewCFNumberMBSSingle(singleValue as single) as CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFNumberMBS object for the given single value.

52.1.61 NewCFObjectMBS(handle as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFObjectMBS object for the given handle.
Example:

```
dim d as CFMutableDictionaryMBS
dim s as CFStringMBS
dim o as CFObjectMBS
dim t as CFStringMBS

d=NewCFMutableDictionaryMBS
s=NewCFStringMBS("Hello")

d.Add s,s

o=d.Value(s) // uses NewCFObjectMBS internally

t=cfstringMBS(o) // Now you can cast here in v5.2!

MsgBox t.str
```

Notes:

Handle is just a CFTypeRef.
If release is true, the destructor of the CFObjectMBS will release the handle later.
In Version 5.2 this function can return objects which may be casted to CFURL, CFDictionary, CFString, CFNumber, CFCharacterSet, CFBag, CFArray, CFBoolean, CFBinaryData or CFSet.

52.1.62 NewCFObjectMBSFromXML(XMLdata as CFBinaryDataMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Parses the XML data and returns a CFObject.
Example:

```
dim f as FolderItem
dim t as TextInputStream
dim s as String
dim o as CFObjectMBS
dim d as CFDictionaryMBS

// get file name
f=GetFolderItem("CF XML Test.txt")
// open file
t=f.OpenAsTextFile
// Read String
s=t.ReadAll

// Create back
o=NewCFObjectMBSFromXML(NewCFBinaryDataMBSStr(s))

// now check if the dictionary we saved is there:
if o<>nil then
if o isa CFDictionaryMBS then
d=CFDictionaryMBS(o)
MsgBox CFStringMBS(d.Value(NewCFStringMBS("Key"))).str
end if
end if
```

Notes:

Note that the CFObject returned is in most times a CFDictionary or a CFArray.
This function takes text and binary plist file content.

52.1.63 NewCFStringMBS(s as string) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a CFStringMBS object created using the given string.
Notes:

Returns nil if s is empty.
The cfstring may be unicode.

See also NewCFStringMBS2 if you want to get an empty CFString object for an empty string.

52.1.64 NewCFTimeIntervalMBS(time as Double) as CFTimeIntervalMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns a new time interval object with the given value.
Notes: Returns nil on any error.

52.1.65 NewCFURLMBSCFStringMBS(cfstr as CFStringMBS, baseurl as CFURLMBS) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the CFStringMBS.

52.1.66 NewCFURLMBSFile(f as folderitem) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from a file.

52.1.67 NewCFURLMBSHFSPath(cfstr as CFStringMBS,directory as boolean) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the CFStringMBS which is interpreted as a HFS path.

52.1.68 NewCFURLMBSMem(mem as memoryblock,len as Integer,encoding as Integer,baseurl as CFURLMBS) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the data inside the memoryblock.
Notes:

Len is the len of the data inside the memoryblock.
Encoding the ID of the text encoding.
BaseURL is the base url. If baseurl=nil then the current application directory is used.

52.1.69 NewCFURLMBSPosixPath(cfstr as CFStringMBS,directory as boolean) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the CFStringMBS which is interpreted as a Posix path.

52.1.70 NewCFURLMBSStr(str as string, baseurl as CFURLMBS) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the string.
Example:

```
dim s as string
dim f as FolderItem
dim cu as CFURLMBS

s="file://localhost/Users/cs/Music/iTunes/iTunes% 20Music"

cu=NewCFURLMBSStr(s,nil) // true=isdirectory
f=cu.file

MsgBox f.NativePath
```

Notes: BaseURL is the base url. If baseurl=nil then the current application directory is used.

52.1.71 NewCFURLMBSWindowsPath(cfstr as CFStringMBS,directory as boolean) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new CFURLMBS from the CFStringMBS which is interpreted as a Windows path.

52.1.72 SetDefaultCFTimeZoneMBS(timezone as CFTimeZoneMBS)

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The default time zone.
Example:

```
msgBox str(GetDefaultCFTimeZoneMBS.SecondsFromGMT(nil).Value)
```

Notes: Returns nil on any error.

52.1.73 SystemCFTimeZoneMBS as CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The current system time zone.
Example:

```
dim s as CFTimeZoneMBS
s=SystemCFTimeZoneMBS
MsgBox s.Name.str
```

Notes: Returns nil on any error.

52.1.74 TypeIDDescriptionMBS(TypeID as Integer) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a string with the name for the CoreFoundation data type.
Notes: e.g. "CFStringMBS" for a CFStringMBS.

52.2 class CFAbsoluteTimeMBS

52.2.1 class CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for an absolute time value.
Example:

```
dim t as new CFAbsoluteTimeMBS
MsgBox str(T.Value)
```

Notes:

Basicly just a double property.

Subclass of the CFTimeIntervalMBS class.

52.2.2 Methods

52.2.3 AddGregorianUnits(timezone as CFTimeZoneMBS, units as CFGregorianUnitsMBS) as CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Adds gregorian time units to the given absolute time and returns the result.
Notes:

Returns nil on any error.
Timezone is optional and can be nil.

52.2.4 Constructor

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: The constructor to initialize the absolution time with the current time.
Example:

```
dim CFDateLocal as new CFAbsoluteTimeMBS
dim CFTimeZone as new CFTimeZoneMBS

dim MyDSTState as Boolean = CFTimeZone.IsDaylightSavingTime(CFDateLocal)

MsgBox str(MyDSTState)
```

See also:

- 52.2.5 Constructor(value as Double) 9940

52.2.5 Constructor(value as Double)

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: The constructor to initialize the absolution time with the given value.
Example:

```
dim a as new CFAbsoluteTimeMBS(5)
MsgBox str(a.Value)
```

See also:

- 52.2.4 Constructor 9940

52.2.6 DayofWeek(timezone as CFTimeZoneMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns an integer representing the day of the week indicated by the specified date.
Example:

```
dim t as new CFAbsoluteTimeMBS
MsgBox str(t.DayofWeek(nil))
```

52.2.7 DayofYear(timezone as CFTimeZoneMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns an integer representing the day of the year indicated by the specified date.
Example:

```
dim t as new CFAbsoluteTimeMBS
MsgBox str(t.DayofYear(nil))
```

52.2.8 GetDifferenceAsGregorianUnits(secondtime as CFAbsoluteTimeMBS, timezone as CFTimeZoneMBS, flags as Integer) as CFGregorianUnitsMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the difference of the two absolute times in gregorian units.
Notes:

Timezone is optional and may be nil.

For flags:

kCFGregorianUnitsYears = 1
kCFGregorianUnitsMonths = 2
kCFGregorianUnitsDays = 4
kCFGregorianUnitsHours = 8
kCFGregorianUnitsMinutes = 16
kCFGregorianUnitsSeconds = 32
kCFGregorianAllUnits = & hFFFFFF

52.2.9 GregorianDate(timezone as CFTimeZoneMBS) as CFGregorianDateMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the gregorian date for the given absolute time.
Example:

```
dim t as new CFAbsoluteTimeMBS
dim g as CFGregorianDateMBS = t.GregorianDate(nil)
MsgBox str(g.Year)
```

Notes:

Timezone is optional and can be nil.
Returns nil on any error.

52.2.10 WeekofYear(timezone as CFTimeZoneMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns an integer representing the week of the year indicated by the specified date.
Example:

```
dim t as new CFAbsoluteTimeMBS
MsgBox str(t.WeekofYear(nil))
```

52.2.11 Properties

52.2.12 Date as CFDateMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date object representing this absolute time value.
Notes:

Returns nil on any error.
(Read only property)

52.3 class CFArrayMBS

52.3.1 class CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation Array.
Example:

```
// copy names of recent items in Xojo Preferences

dim names() as string
dim c as new CFPreferencesMBS

dim o as CFObjectMBS = c.CopyAppValue(NewCFStringMBS("Recent Items Dict"), NewCFStringMBS("com.realsoftware.realstudio"))

if o isa CFArrayMBS then
dim a as CFArrayMBS = CFArrayMBS(o)

dim u as Integer = a.Count-1
for i as Integer = 0 to u

o = a.Item(i)

if o isa CFDictionaryMBS then
dim d as CFDictionaryMBS = CFDictionaryMBS(o)

dim no as CFObjectMBS = d.Value(NewCFStringMBS("Name"))
if no isa CFStringMBS then

dim ns as CFStringMBS = CFStringMBS(no)

names.Append ns.str
end if
end if
next
end if

MsgBox Join(names,EndOfLine)
```

Notes:

If the release property is true, the destructor of this class will release the array reference.

From CFArrayMBS.h:

CFArray implements an ordered, compact container of pointer-sized values. Values are accessed via integer keys (indices), from the range 0 to N-1, where N is the number of values in the array when an operation is performed. The array is said to be "compact" because deleted or inserted values do not leave a gap in the key space – the values with higher-numbered indices have their indices renumbered lower (or higher, in the case of insertion) so that the set of valid indices is always in the integer range [0, N-1] . Thus, the index to access a particular value in the array may change over time as other values are inserted into or deleted from the array.

Arrays come in two flavors, immutable, which cannot have values added to them or removed from them after the array is created, and mutable, to which you can add values or from which remove values. Mutable arrays have two subflavors, fixed-capacity, for which there is a maximum number set at creation time of values which can be put into the array, and variable capacity, which can have an unlimited number of values (or rather, limited only by constraints external to CFArray, like the amount of available memory). Fixed-capacity arrays can be somewhat higher performing, if you can put a definate upper limit on the number of values that might be put into the array.

As with all CoreFoundation collection types, arrays maintain hard references on the values you put in them, but the retaining and releasing functions are user-defined callbacks that can actually do whatever the user wants (for example, nothing).

Computational Complexity The access time for a value in the array is guaranteed to be at worst O(lg N) for any implementation, current and future, but will often be O(1) (constant time). Linear search operations similarly have a worst case complexity of O(N*lg N), though typically the bounds will be tighter, and so on. Insertion or deletion operations will typically be linear in the number of values in the array, but may be O(N*lg N) clearly in the worst case in some implementations. There are no favored positions within the array for performance; that is, it is not necessarily faster access values with low indices, or to insert or delete values with high indices, or whatever.

This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

52.3.4 Methods

52.3.5 arrayWithContentsOfFile(file as folderitem) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Creates and returns an array containing the contents of the file specified by a given path.
Example:

```
dim a as new CFMutableArrayMBS

a.Append NewCFStringMBS("Hello")
a.Append NewCFStringMBS("World")

dim f as FolderItem = SpecialFolder.Desktop.Child("test.xml")

if a.writeToFile(f, true) then
MsgBox "OK"
else
MsgBox "Failed"
end if

dim x as CFArrayMBS = CFArrayMBS.arrayWithContentsOfFile(f)
MsgBox x.XML.str
```

Notes:

file: The path to a file containing a string representation of an array produced by the writeToFile method.

Returns an array containing the contents of the file specified by aPath. Returns nil if the file can't be opened or if the contents of the file can't be parsed into an array.

The array representation in the file identified by aPath must contain only property list objects (NSString/CFString, NSData/CFData, NSArray/CFArray, or NSDictionary/CFDictionary objects).

Returns nil on any error.

52.3.6 arrayWithContentsOfURL(URL as string) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Creates and returns an array containing the contents specified by a given URL.
Notes:

URL: The location of a file containing a string representation of an array produced by the writeToURL method.

Returns an array containing the contents specified by aURL. Returns nil if the location can't be opened or if the contents of the location can't be parsed into an array.

The array representation at the location identified by aURL must contain only property list objects (NSString/CFString, NSData/CFData, NSArray/CFArray, or NSDictionary/CFDictionary objects).

Returns nil on any error.

52.3.7 arrayWithHandle(Handle as Integer) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Creates a new array object based on a handle value.
Notes: Will retain the reference.

52.3.8 clone as CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new immutable array with the values from the given array.
Notes: The values itself are not duplicated, but retained.

52.3.9 Constructor

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates a new editable array object.
Example:

```
dim b as new CFMutableArrayMBS

b.Append(NewCFStringMBS("Hello"))
```

```
MsgBox str(b.Count)
```

See also:

- 52.3.10 Constructor(values() as string) 9948

52.3.10 Constructor(values() as string)

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a new CFArrayMBS object with CFString objects created from the given string array.
Example:

```
dim values() as string = array("Hello", "World", "Just", "a", "Test")
dim a as new CFArrayMBS(values)

MsgBox str(a.Count)+" elements"
MsgBox a.XML.Str // show as xml
```

See also:

- 52.3.9 Constructor 9947

52.3.11 ContainsValue(value as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Reports whether or not the value is in the array.

52.3.12 CountOfValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts the number of times the given value occurs in the array.

52.3.13 Edit as CFMutableArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a new mutable array with the values from the current array.

52.3.14 FirstIndexOfValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Searches the array for the value.
Notes:

Result:
The lowest index of the matching values, or -1 if no value matched.

52.3.15 Item(index as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the entry with the given index.
Notes: Index from 0 to count-1.

52.3.16 LastIndexOfValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Searches the array for the value.
Notes:

Result:
The lowest highest of the matching values, or -1 if no value matched.

52.3.17 writeToFile(file as folderitem, useAuxiliaryFile as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Writes the contents of the receiver to a file at a given path.
Example:

```
dim a as new CFMutableArrayMBS

a.Append NewCFStringMBS("Hello")
a.Append NewCFStringMBS("World")

dim f as FolderItem = SpecialFolder.Desktop.Child("test.xml")
```

```
if a.writeToFile(f, true) then
MsgBox "OK"
else
MsgBox "Failed"
end if

dim x as CFArrayMBS = CFArrayMBS.arrayWithContentsOfFile(f)
MsgBox x.XML.str
```

Notes:

file: The path at which to write the contents of the receiver.
useAuxiliaryFile: If true, the array is written to an auxiliary file, and then the auxiliary file is renamed to path. If false, the array is written directly to path. The true option guarantees that path, if it exists at all, won't be corrupted even if the system should crash during writing.

Returns true if the file is written successfully, otherwise false.

If the receiver's contents are all property list objects (NSString, NSData, NSArray, or NSDictionary objects), the file written by this method can be used to initialize a new array with the class method arrayWithContentsOfFile. This method recursively validates that all the contained objects are property list objects before writing out the file, and returns false if all the objects are not property list objects, since the resultant file would not be a valid property list.

52.3.18 writeToURL(url as string, atomically as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Writes the contents of the receiver to the location specified by a given URL.
Notes:

URL: The location at which to write the receiver.
atomically: If true, the array is written to an auxiliary location, and then the auxiliary location is renamed to aURL. If false, the array is written directly to aURL. The true option guarantees that aURL, if it exists at all, won't be corrupted even if the system should crash during writing.

Returns true if the location is written successfully, otherwise false.

If the receiver's contents are all property list objects (NSString, NSData, NSArray, or NSDictionary objects), the location written by this method can be used to initialize a new array with the class method arrayWithContentsOfURL.

52.3.19 Properties

52.3.20 count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the number of values currently in the array.
Example:

```
dim x as new CFMutableDictionaryMBS

x.Add(NewCFStringMBS("Hello"), NewCFStringMBS("World"))

MsgBox str(x.Count)
```

Notes: (Read only property)

52.4 class CFAttributedStringMBS

52.4.1 class CFAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: This is the class for a CoreFoundation attributed string.
Notes: Subclass of the CFObjectMBS class.

52.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr9
- MBS REALbasic Plugins, version 10.3pr8

52.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr9
- MBS REALbasic Plugins, version 10.3pr8

52.4.4 Methods

52.4.5 AsNSAttributedString as Variant

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new NSAttributedStringMBS object pointing to same attributed string.
Example:

```
// make CF version
dim c as CFAttributedStringMBS = CFAttributedStringMBS.Create("Hello World", nil)
MsgBox c.String

// get NS Version
dim n as NSAttributedStringMBS = c.AsNSAttributedString
MsgBox n.text
```

Notes: For passing to functions which need a NSAttributedStringMBS.

52.4.6 AttributeAndLongestEffectiveRange(location as Integer, attrName as CFStringMBS, inRange as CFRangeMBS, byref effectiveRange as CFRangeMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the value of a given attribute of an attributed string at a specified location.
Notes:

location: The location in str at which to determine the attributes. It is a programming error for loc to specify a location outside the bounds of str.
attrName: The name of the attribute whose value you want to determine.
inRange: The range in str within which you want to find the longest effective range of the attributes at loc. inRange must not exceed the bounds of str.
effectiveRange: upon return contains the maximal range within inRange over which the exact same set of attributes apply. The returned range is clipped to inRange.
Returns the attribute value of str at the specified location.

52.4.7 AttributesAndLongestEffectiveRange(location as Integer, inRange as CFRangeMBS, byref effectiveRange as CFRangeMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the attributes of an attributed string at a specified location.
Notes:

location: The location in str at which to determine the attributes. loc must not exceed the bounds of str.
inRange: The range in str within to find the longest effective range of the attributes at loc. inRange must not exceed the bounds of str.
effectiveRange: upon return contains the maximal range within inRange over which the exact same set of attributes apply. The returned range is clipped to inRange.

52.4.8 AttributesDictionary(location as Integer, byref effectiveRange as CFRangeMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the attributes of an attributed string at a specified location.
Notes:

location: The location in str at which to determine the attributes. loc must not exceed the bounds of str.
effectiveRange: upon return contains a range including loc over which exactly the same set of attributes apply as at loc.

Returns a dictionary that contains the attributes of str at the specified location. Ownership follows the Get

Rule.

For performance reasons, a range returned in effectiveRange is not necessarily the maximal range. If you need the maximum range, you should use AttributesAndLongestEffectiveRange.

Note that the returned attribute dictionary might change in unpredictable ways if the attributed string is edited after this call. If you want to preserve the state of the dictionary, you should make an actual copy of it rather than just retaining it. In addition, you should make no assumptions about the relationship of the actual dictionary returned by this call and the dictionary originally used to set the attributes, other than the fact that the values stored in the dictionaries will be identical (that is, ==) to those originally specified.

52.4.9 AttributeValue(location as Integer, attrName as CFStringMBS, byref effectiveRange as CFRangeMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the value of a given attribute of an attributed string at a specified location.
Notes:

location: The location in str at which to determine the attributes. loc must not exceed the bounds of str.
attrName: The name of the attribute whose value you want to determine.
effectiveRange: upon return contains a range including loc over which exactly the same set of attributes apply as at location.

Returns the value of the specified attribute at the specified location in str. Ownership follows the Get Rule.

For performance reasons, a range returned in effectiveRange is not necessarily the maximal range. If you need the maximum range, you should use AttributeAndLongestEffectiveRange.

52.4.10 Constructor(str as CFAttributedStringMBS, range as CFRangeMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a sub-attributed string from the specified range.
Notes:

str: The attributed string to copy.
range: The range of the attributed string to copy. range must not exceed the bounds of Str.

Returns a new attributed string whose string and attributes are copied from the specified range of the supplied attributed string. Raises OutOfMemory exception if there was a problem copying the object. Ownership follows the Create Rule.

See also:

- 52.4.11 Constructor(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil) 9955

52.4.11 Constructor(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an attributed string with specified string and attributes.
Notes:

str: A string that specifies the characters to use in the new attributed string. This value is copied.
attributeDictionary: A dictionary that contains the attributes to apply to the new attributed string. This value is copied.

Returns an attributed string that contains the characters from str and the attributes specified by attributes. Raises OutOfMemory exception if there was a problem in creating the attributed string.

Note that both the string and the attributes dictionary are copied. The specified attributes are applied to the whole string. If you want to apply different attributes to different ranges of the string, you should use a mutable attributed string.
See also:

- 52.4.10 Constructor(str as CFAttributedStringMBS, range as CFRangeMBS) 9954

52.4.12 Copy as CFAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable copy of an attributed string.

52.4.13 Create(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil) as CFAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an attributed string with specified string and attributes.
Notes:

str: A string that specifies the characters to use in the new attributed string. This value is copied.
attributeDictionary: A dictionary that contains the attributes to apply to the new attributed string. This value is copied.

Returns an attributed string that contains the characters from str and the attributes specified by attributes. The result is nil if there was a problem in creating the attributed string.

Note that both the string and the attributes dictionary are copied. The specified attributes are applied to the whole string. If you want to apply different attributes to different ranges of the string, you should use a mutable attributed string.

52.4.14 CreateWithSubstring(str as CFAttributedStringMBS, range as CFRangeMBS) as CFAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a sub-attributed string from the specified range.
Notes:

str: The attributed string to copy.
range: The range of the attributed string to copy. range must not exceed the bounds of Str.

Returns a new attributed string whose string and attributes are copied from the specified range of the supplied attributed string. Returns nil if there was a problem copying the object. Ownership follows the Create Rule.

52.4.15 GetLength as Integer

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Queries the length of the string.
Deprecated: This item is deprecated and should no longer be used. **Notes:** Deprecated in favor of Length property.

52.4.16 GetString as CFStringMBS

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Queries the text of the attributed string.
Deprecated: This item is deprecated and should no longer be used. **Notes:** Deprecated in favor of String function.

52.4.17 MutableCopy(maxLength as Integer = 0) as CFAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a mutable attributed string copy.
Notes: maxLength, if not 0, is a hard bound on the length of the attributed string; exceeding this size limit during any editing operation is a programming error. If 0, there is no limit on the length.

52.4.18 String as CFStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the string for an attributed string.
Notes: For performance reasons, the string returned will often be the backing store of the attributed string, and it might therefore change if the attributed string is edited. However, this is an implementation detail, and you should not rely on this behavior.

52.4.19 Properties

52.4.20 Length as Integer

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the length of the attributed string in characters.
Notes: (Read only property)

52.5 class CFBagListMBS

52.5.1 class CFBagListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for the items of a CFBag.

52.5.2 Methods

52.5.3 Value(index as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the value with the given index.

52.5.4 Properties

52.5.5 Count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts the items in the set.
Notes: (Read and Write property)

52.6 class CFBagMBS

52.6.1 class CFBagMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation bag.
Notes:

If the release property is true, the destructor of this class will release the set reference.
Subclass of the CFObjectMBS class.

52.6.2 Methods

52.6.3 clone as CFBagMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Clones the set and all values.

52.6.4 Constructor

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: The constructor which creates a new editable bag.
Example:

```
dim b as new CFMutableBagMBS
```

52.6.5 ContainsValue(value as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does the set contain this value?

52.6.6 CountValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts how often this value is inside the set.

52.6.7 edit as CFMutableBagMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: To edit a set, this method returns you a CFMutableBagMBS.

52.6.8 List as CFBagListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all values.
Notes: This list will be invalid whenever this set is destroyed.

52.6.9 Value(value as CFObjectMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: If the value is found the value is returned.
Notes: Returns nil if key is not found.

52.6.10 Properties

52.6.11 Count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts all values.
Example:

```
dim b as new CFMutableBagMBS

b.Add(NewCFStringMBS("Hello"))

MsgBox str(b.Count)
```

Notes: (Read only property)

52.7 class CFBinaryDataMBS

52.7.1 class CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for core foundation data.
Notes:

If the release property is true, the destructor of this class will release the data reference.
This class works on Windows with QuickTime 7 installed.

This wraps a CFDataRef from Apple. It was named CFBinaryDataMBS instead of CFDataMBS over 10 years ago.
Subclass of the CFObjectMBS class.

52.7.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr2
- MBS Real Studio Plugins, version 13.0pr1

52.7.3 Blog Entries

52.7.4 Methods

52.7.5 clone as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Makes a deep copy of the CFBinaryDataMBS object.

52.7.6 Constructor(data as MemoryBlock)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a new data object with given content.
Example:

```
dim m as MemoryBlock = "Hello"
dim d as new CFBinaryDataMBS(m)

MsgBox d.Str
```

See also:

- 52.7.7 Constructor(data as string) 9962

52.7.7 Constructor(data as string)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a new data object with given content.
Example:

```
dim m as string = "Hello"
dim d as new CFBinaryDataMBS(m)

MsgBox d.Str
```

See also:

- 52.7.6 Constructor(data as MemoryBlock) 9961

52.7.8 Edit as CFMutableBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Makes a copy of the CFBinaryDataMBS object for editing.

52.7.9 Mem as Memoryblock

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The binary data returned as a Xojo memoryblocks.
See also:

- 52.7.10 Mem(pos as Integer,len as Integer) as Memoryblock 9963

52.7.10 Mem(pos as Integer,len as Integer) as Memoryblock

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The binary data returned as a Xojo memoryblocks.
See also:

- 52.7.9 Mem as Memoryblock 9962

52.7.11 Str as String

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The binary data returned as a Xojo string.
See also:

- 52.7.12 Str(pos as Integer,len as Integer) as String 9963

52.7.12 Str(pos as Integer,len as Integer) as String

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The binary data returned as a Xojo string.
See also:

- 52.7.11 Str as String 9963

52.7.13 Properties

52.7.14 len as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The length of this binary data in bytes.
Example:

```
dim b as CFBinaryDataMBS = NewCFBinaryDataMBSStr("Hello")
MsgBox str(b.Len) // shows 5
```

Notes: (Read only property)

52.8 class CFBooleanMBS

52.8.1 class CFBooleanMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation boolean.
Notes:

If the release property is true, the destructor of this class will release the boolean reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

52.8.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr2
- MBS Real Studio Plugins, version 13.0pr1

52.8.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr2

52.8.4 Methods

52.8.5 Constructor(value as Boolean)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The constructor.

52.8.6 Operator_Convert as Boolean

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: A helper method for auto conversion between boolean and CFBooleanMBS.
See also:

- 52.8.7 Operator_Convert(v As Boolean)

52.8.7 Operator_Convert(v As Boolean)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: A helper method for auto conversion between boolean and CFBooleanMBS.
See also:

- 52.8.6 Operator_Convert as Boolean 9964

52.8.8 Properties

52.8.9 Value as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The value of this CFBooleanMBS object.
Notes: (Read only property)

52.9 class CFBundleMBS

52.9.1 class CFBundleMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation bundle.
Example:

```
// get FolderItem
dim f as FolderItem = SpecialFolder.Applications.Child("Safari.app")

// make bundle
dim b as CFBundleMBS = CreateBundleMBS(f)

// make a key
dim k as CFStringMBS = NewCFStringMBS("CFBundleShortVersionString")

// lookup the value
dim i as CFObjectMBS = b.GetValueForInfoDictionaryKey(k)

// it's a string, so show it
dim s as CFStringMBS = CFStringMBS(i)
MsgBox s.str
```

Notes:

If the release property is true, the destructor of this class will release the boolean reference.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

52.9.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr1
- NSBundleMBS and NSDirectoryEnumeratorMBS

52.9.3 Blog Entries

- MBS Xojo Plugins, version 17.3pr1
- NSBundleMBS and NSDirectoryEnumeratorMBS

52.9.4 Methods

52.9.5 BuiltInPlugInsDirectory as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The built in plugins folder of the bundle.
Notes: Returns nil on any error.

52.9.6 Constructor

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The private constructor.

52.9.7 DevelopmentRegion as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The development region of the bundle.
Notes: Returns nil on any error.

52.9.8 ExecutableFile as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The executable file of the bundle.
Example:

```
// The following code does not have any check for nil, so it may crash at any point!

dim f as FolderItem
dim c as CFBundleMBS
dim url as CFURLMBS

// Get Path to Mail
f=ApplicationsFolderMBS(-32766).Child("mail.app")

// Make a CFURL from the file
url=NewCFURLMBSFile(f)
// Create a bundle object
c=CreateBundleMBS(url)
```

```
// show the path
MsgBox c.ExecutableFile.file.NativePath
```

Notes: Returns nil on any error.

52.9.9 GetInfoDictionary as CFDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The information dictionary for the bundle.
Notes: Returns nil on any error.

52.9.10 GetLocalInfoDictionary as CFDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The local information dictionary for the bundle.
Notes: Returns nil on any error.

52.9.11 GetValueForInfoDictionaryKey(key as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a value from the information dictionary for the given key.
Example:

```
// lists the document types Mail.app can read

dim f as FolderItem
dim b as CFBundleMBS
dim u as CFURLMBS
dim s as string
dim a as CFArrayMBS
dim i as Integer
dim c as Integer
dim o as CFObjectMBS
dim d as CFDictionaryMBS
dim t(-1) as string

f=ApplicationsFolderMBS(-32766).Child("Mail.app")
u=NewCFURLMBSFile(f)
b=CreateBundleMBS(u)
```

```
o=b.GetValueForInfoDictionaryKey(NewCFStringMBS("CFBundleDocumentTypes"))

if o isa CFArrayMBS then
a=cfarraymbs(o)

c=a.Count-1
for i=0 to c
o=a.Item(i)
if o isa CFDictionaryMBS then
d=CFDictionaryMBS(o)
o=d.Value(NewCFStringMBS("CFBundleTypeName"))
if o isa CFStringMBS then
s=CFStringMBS(o).str
t.Append s
end if
end if
next
end if

s=Join(t,", ")
MsgBox s
```

Notes: Returns nil on any error.

52.9.12 Identifier as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The identifier for the bundle.
Notes: Returns nil on any error.

52.9.13 kCFBundleDevelopmentRegionKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Returns nil on any error.

52.9.14 kCFBundleDisplayNameKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes:

Display name of the bundle. Can be localized.
Returns nil on any error.

52.9.15 kCFBundleExecutableKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Returns nil on any error.

52.9.16 kCFBundleIdentifierKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Example:

```
// Find the bundle id for Mail.app

dim f as FolderItem
dim b as CFBundleMBS
dim u as CFURLMBS
dim s as string
dim o as CFObjectMBS

f=ApplicationsFolderMBS(-32766).Child("Mail.app")
u=NewCFURLMBSFile(f)
b=CreateBundleMBS(u)
o=b.GetValueForInfoDictionaryKey(b.kCFBundleIdentifierKey)

if o isa CFStringMBS then
s=cfstringmbs(o).str
end if

msgbox s
```

Notes: Returns nil on any error.

52.9.17 kCFBundleInfoDictionaryVersionKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Returns nil on any error.

52.9.18 kCFBundleNameKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Returns nil on any error.

52.9.19 kCFBundleVersionKey as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: One of the keys for the dictionaries.
Notes: Returns nil on any error.

52.9.20 LocalizedString(key as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Same as the other LocalizedString functions, but the default table and not value is always used.
See also:

- 52.9.21 LocalizedString(key as CFStringMBS, value as CFStringMBS) as CFStringMBS 9971
- 52.9.22 LocalizedString(key as CFStringMBS, value as CFStringMBS, TableName as CFStringMBS) as CFStringMBS 9972

52.9.21 LocalizedString(key as CFStringMBS, value as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Same as the other LocalizedString functions, but the default table is always used.
See also:

- 52.9.20 LocalizedString(key as CFStringMBS) as CFStringMBS 9971

• 52.9.22 LocalizedString(key as CFStringMBS, value as CFStringMBS, TableName as CFStringMBS) as CFStringMBS 9972

52.9.22 LocalizedString(key as CFStringMBS, value as CFStringMBS, TableName as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Returns the localized string for the given key and table.
Notes:

The table parameter is optional to specify which ".strings"-file to use.
without table or table="" the "Localizable.strings" file is used by Mac OS X.

key: The key for the localized string you wish to retrieve. This key will be used to look up the localized string in the strings file. Typically the key is identical to the value of the localized string in the development language.

value: A comment which might assist the translator. As used by the localized string macros and the genstrings tool, this value becomes an annotation in the generated strings file.

tableName: The name of the strings file you wish to search. The name should not include the strings filename extension.

Returns "" (empty string) on Mac OS Classic or Windows.
See also:

• 52.9.20 LocalizedString(key as CFStringMBS) as CFStringMBS 9971

• 52.9.21 LocalizedString(key as CFStringMBS, value as CFStringMBS) as CFStringMBS 9971

52.9.23 MainBundle as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Returns a CFBundle for the main bundle (current app).
Example:

MsgBox CFBundleMBS.MainBundle.Identifier

52.9.24 PackageMacCreator as string

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The Mac OS creator code for this bundle.
Notes: Returns "" on any error.

52.9.25 PackageMacType as string

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The Mac OS file type code for this bundle.
Notes:

Returns "" on any error.
Should be "APPL" for applications.

52.9.26 PrivateFrameworksDirectory as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The private framework folder of the bundle.
Notes: Returns nil on any error.

52.9.27 ResourceDirectory as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The resource folder of the bundle.
Notes: Returns nil on any error.

52.9.28 ResourceURL(resourceName as CFStringMBS, resourceType as CFStringMBS, subDirName as CFStringMBS) as CFURLMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Searches inside the application bundle for a file.
Example:

```
dim b as CFBundleMBS
dim u as CFURLMBS
dim f as FolderItem
```

```
b=app.MainBundleMBS

u=b.ResourceURL(NewCFStringMBS("Photo"),NewCFStringMBS("tif"),nil)

f=u.file

MsgBox f.NativePath
// e.g. "Content/Resources/Photo.tif" inside your bundle.
```

Notes:

ResourceName is the filename of the resource file.
ResourceType is the file extension.
SubDirectory is the name of the directory.
This function will take care for localization folders.

52.9.29 ResourceURLForLocalization(resourceName as CFStringMBS, resourceType as CFStringMBS, subDirName as CFStringMBS, localizationName as CFStringMBS) as CFURLMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Searches inside the application bundle for a file with the given localization.
Notes:

ResourceName is the filename of the resource file.
ResourceType is the file extension.
SubDirectory is the name of the directory.
localizationName is the name of the localization requested.
This function will take care for localization folders.

52.9.30 ResourceURLsOfType(resourceType as CFStringMBS, subDirName as CFStringMBS) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Searches inside the bundle like ResourceURL, but returns an array of all matching files.

52.9.31 ResourceURLsOfTypeForLocalization(resourceType as CFStringMBS, subDirName as CFStringMBS, localizationName as CFStringMBS) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: Searches inside the bundle like ResourceURLForLocalization, but returns an array of all matching files.

52.9.32 SharedFrameworksDirectory as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The shared framework folder of the bundle.
Notes: Returns nil on any error.

52.9.33 SharedSupportURL as CFURLMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: The shared support files folder of the bundle.
Notes: Returns nil on any error.

52.9.34 SupportFilesDirectory as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The support files folder of the bundle.
Notes: Returns nil on any error.

52.9.35 URL as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The URL for the given bundle.
Notes: Returns nil on any error.

52.9.36 Version as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The version of the bundle.
Notes: Returns nil on any error.

52.10 class CFCharacterSetMBS

52.10.1 class CFCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation character Set.
Notes:

If the release property is true, the destructor of this class will release the set reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

52.10.4 Methods

52.10.5 Binary as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: This function returns the content of the CharacterSet as a CFBinaryData.
Notes: Returns nil on any error.

52.10.6 edit as CFMutableCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: To edit a character set, this method returns you a CFMutableCharacterSetMBS.

52.10.7 GetPredefinedCFCharacterSet(id as Integer) as CFCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a predefined Character set.

52.10.8 IsMember(charcode as Integer) as Boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns true if the unicode character is part of this CharacterSet.
Notes: Works only for charcode from 0 to & hFFFF.

52.10.9 kCFCharacterSetAlphaNumeric as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for alpha numeric characters.

52.10.10 kCFCharacterSetControl as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for control characters.

52.10.11 kCFCharacterSetDecimalDigit as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for decimal digit characters.

52.10.12 kCFCharacterSetDecomposable as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for decomposable characters.

52.10.13 kCFCharacterSetIllegal as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for illegal characters.

52.10.14 kCFCharacterSetLetter as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for letter characters.

52.10.15 kCFCharacterSetLowercaseLetter as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for lowercase letter characters.

52.10.16 kCFCharacterSetNonBase as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for non base characters.

52.10.17 kCFCharacterSetPunctuation as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for punctuation characters.

52.10.18 kCFCharacterSetUppercaseLetter as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for uppercase letter characters.

52.10.19 kCFCharacterSetWhitespace as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for whitespace characters.

52.10.20 kCFCharacterSetWhitespaceAndNewline as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ID of the predefined character set for whitespace characters and newline.

52.10.21 NewCFCharacterSet(str as CFBinaryDataMBS) as CFCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a Character set with characters inside the CFBinary object.
See also:

- 52.10.22 NewCFCharacterSet(str as CFStringMBS) as CFCharacterSetMBS 9980

52.10.22 NewCFCharacterSet(str as CFStringMBS) as CFCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a Character set with characters inside the CFStringMBS object.
See also:

- 52.10.21 NewCFCharacterSet(str as CFBinaryDataMBS) as CFCharacterSetMBS 9980

52.10.23 NewCFCharacterSetRange(min as Integer, length as Integer) as CFCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a Character set with chars between min and max.
Example:

```
dim c as new CFCharacterSetMBS

c = CFCharacterSetMBS.NewCFCharacterSetRange(asc("A"), 26)

MsgBox str(c.IsMember(asc("C"))) // true
```

```
MsgBox str(c.IsMember(asc("1"))) // false
```

Notes: Use Unicode charcodes for min and max.

52.11 class CFDateMBS

52.11.1 class CFDateMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation date.
Notes:

If the release property is true, the destructor of this class will release the date reference.
Subclass of the CFObjectMBS class.

52.11.2 Blog Entries

- MBS Xojo Plugins, version 19.0pr6

52.11.3 Blog Entries

- MBS Xojo Plugins, version 19.0pr6

52.11.4 Methods

52.11.5 AbsoluteTime as CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The absolute time value for this date.
Notes:

Returns nil on any error.
timezone is optional and may be nil.

52.11.6 Compare(otherdate as CFDateMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Compares two date objects.
Notes:

Result codes:
kCFCompareLessThan = -1
kCFCompareEqualTo = 0
kCFCompareGreaterThan = 1

On any error returns 0.

52.11.7 Constructor

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Creates new date object with current timestamp.
Example:

```
dim d as new CFDateMBS
MsgBox d.date.SQLDateTime
```

See also:

- 52.11.8 Constructor(date as CFDateMBS) 9983
- 52.11.9 Constructor(date as date, timeZone as CFTimeZoneMBS = nil) 9983

52.11.8 Constructor(date as CFDateMBS)

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Creates a new Xojo object with a copy of the CFDate object inside.
See also:

- 52.11.7 Constructor 9983
- 52.11.9 Constructor(date as date, timeZone as CFTimeZoneMBS = nil) 9983

52.11.9 Constructor(date as date, timeZone as CFTimeZoneMBS = nil)

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor using Xojo date.
Example:

```
// Xojo now
dim d as new date
// convert to CFDate
dim c as new CFDateMBS(d)
// and convert back
dim x as date = c

// compare in de bugger
```

```
dim ds as string = d.SQLDateTime
dim dx as string = x.SQLDateTime

Break
```

Notes: If time zone is nil, we use UTC.
See also:

- 52.11.7 Constructor 9983
- 52.11.8 Constructor(date as CFDateMBS) 9983

52.11.10 Date(timeZone as CFTimeZoneMBS = nil) as Date

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a Xojo date from CFDate with given time zoen.
Notes: If time zone is nil, we use UTC.

52.11.11 DateTime(timeZone as CFTimeZoneMBS = nil) as DateTime

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Creates a Xojo date from CFDate with given time zoen.
Notes: If time zone is nil, we use UTC.

52.11.12 NewDate(date as date, timeZone as CFTimeZoneMBS = nil) as CFDateMBS

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a Xojo date from CFDate with given time zone.
Example:

```
// Xojo now
dim d as new date
// convert to CFDate in UTC
dim c as CFDateMBS = CFDateMBS.NewDate(d, nil)
// and convert back
dim x as date = c.Date(nil)

// compare in debugger
dim ds as string = d.SQLDateTime
```

```
dim dx as string = x.SQLDateTime

// and with current time zone
dim dx2 as string = c.Date(SystemCFTimeZoneMBS).SQLDateTime

Break
```

Notes: If time zone is nil, we use UTC.
See also:

- 52.11.13 NewDate(date as dateTime, timeZone as CFTimeZoneMBS = nil) as CFDateMBS 9985

52.11.13 NewDate(date as dateTime, timeZone as CFTimeZoneMBS = nil) as CFDateMBS

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Creates a Xojo dateTime from CFDate with given time zone.
Notes: If time zone is nil, we use UTC.
See also:

- 52.11.12 NewDate(date as date, timeZone as CFTimeZoneMBS = nil) as CFDateMBS 9984

52.11.14 Now as CFDateMBS

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Creates new date object with current timestamp.
Example:

```
dim d as CFDateMBS = CFDateMBS.now
MsgBox d.date.SQLDateTime
```

52.11.15 Operator_Convert as Date

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Converts from CFDate to Xojo date in UTC.
Example:

```
// Xojo now
dim d as new date
// convert to CFDate
```

```
dim c as new CFDateMBS(d)
// and convert back
dim x as date = c

// compare in de bugger
dim ds as string = d.SQLDateTime
dim dx as string = x.SQLDateTime

Break
```

See also:

- 52.11.16 Operator_Convert as DateTime 9986

52.11.16 Operator_Convert as DateTime

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Converts from CFDate to Xojo dateTime in UTC.
See also:

- 52.11.15 Operator_Convert as Date 9985

52.11.17 TimeIntervalSinceDate(otherdate as CFDateMBS) as CFTimeIntervalMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The dfference between two dates as a time interval.
Notes: Returns nil on any error.

52.12 class CFDictionaryListMBS

52.12.1 class CFDictionaryListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for the items of a CFDictionaryMBS.
Notes: This class works on Windows with QuickTime 7 installed.

52.12.2 Methods

52.12.3 close

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

52.12.4 Key(index as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the key with the given index.
Notes: Index between 0 and count-1.

52.12.5 Value(index as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the value with the given index.
Notes: Index between 0 and count-1.

52.12.6 Properties

52.12.7 count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts the elements inside this list.
Notes: (Read and Write property)

52.13 class CFDictionaryMBS

52.13.1 class CFDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation dictionary.
Example:

```
dim c as new CFPreferencesMBS
dim o as CFObjectMBS = c.CopyAppValue(NewCFStringMBS("VisibleIdentifiers"), NewCFStringMBS("com.apple.speech.voice.prefs"))
dim d as CFDictionaryMBS = CFDictionaryMBS(o)

break // see dictionary in debugger
```

Notes:

If the release property is true, the destructor of this class will release the dictionary reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

52.13.4 Methods

52.13.5 CGPointFromDictionary(dic as CFDictionaryMBS) as variant

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates CGPointMBS object from dictionary.
Notes: Make a CGPointMBS from the contents of dict (presumably returned earlier from CFDictionaryMBS.dictionaryWithCGPoint) and returns the value in point. Returns object on success; nil otherwise.

52.13.6 CGRectFromDictionary(dic as CFDictionaryMBS) as variant

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates CGRectMBS object from dictionary.
Notes: Make a CGRect from the contents of dict (presumably returned earlier from CFDictionaryMBS.dictionaryWithCGRect) and returns the value in point. Returns object on success; nil otherwise.

52.13.7 CGSizeFromDictionary(dic as CFDictionaryMBS) as variant

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates CGSizeMBS object from dictionary.
Notes: Make a CGSize from the contents of dict (presumably returned earlier from CFDictionaryMBS.dictionaryWithCGSize) and returns the value in point. Returns object on success; nil otherwise.

52.13.8 clone as CFDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Clones the dictionary and all values.

52.13.9 Constructor

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates a new editable dictionary.
Example:

```
dim m as new CFMutableDictionaryMBS
m.Add(NewCFStringMBS("Key"), NewCFStringMBS("value"))
MsgBox str(m.Count)
```

See also:

- 52.13.10 Constructor(dic as dictionary) 9991

52.13.10 Constructor(dic as dictionary)

MBS MacCF Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Creates a new CFDictionary based on the Xojo Dictionary.
Example:

```
// build a dictionary
dim d as new Dictionary

d.Value("Hello")=2
d.Value("test")="World"
d.Value("ddd")=5.6

// convert to CFDictionary
dim c as new CFDictionaryMBS(d)

// Display as XML
dim b as CFBinaryDataMBS = c.XML
MsgBox b.str

// now convert back
dim e as Dictionary = c.dictionary

// and display values
for each key as Variant in e.keys
MsgBox key+" ->"+e.Value(key)
next
```

Notes:

Be aware that the Dictionary is converted as good as possible. Unsupported datatype will be missing.

See the FAQ for the supported type translation between CoreFoundation and Xojo data types.

See also:

- 52.13.9 Constructor 9990

52.13.11 ContainsKey(value as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does the dictionary contain this key?
Example:

```
dim c as CFMutableDictionaryMBS = NewCFMutableDictionaryMBS

c.Add NewCFStringMBS("test"),NewCFStringMBS("Value")

MsgBox c.XML.Str

if c.ContainsKey(NewCFStringMBS("test")) then
MsgBox "OK"
else
MsgBox "Failed"
end if

if c.ContainsKey(NewCFStringMBS("missing")) then
MsgBox "Failed"
else
MsgBox "OK"
end if
```

52.13.12 ContainsValue(value as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does the dictionary contain this value?

52.13.13 CountKey(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts how often this key is inside the dictionary.

52.13.14 CountValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts how often this value is inside the dictionary.

52.13.15 Dictionary as Dictionary

MBS MacCF Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Creates a Xojo Dictionary from this CFDictionary.
Example:

```
// build a dictionary
dim d as new Dictionary

d.Value("Hello")=2
d.Value("test")="World"
d.Value("ddd")=5.6

// convert to CFDictionary
dim c as new CFDictionaryMBS(d)

// Display as XML
dim b as CFBinaryDataMBS = c.XML
MsgBox b.str

// now convert back
dim e as Dictionary = c.dictionary

// and display values
for each key as Variant in e.keys
MsgBox key+" ->"+e.Value(key)
next
```

Notes:

Be aware that the CFDictionary is converted as good as possible. Unsupported datatype will be missing.

See the FAQ for the supported type translation between CoreFoundation and Xojo data types.

52.13.16 dictionaryWithCGPoint(point as variant) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Return a dictionary representation of point.
Notes:

Rect must be a CGPointMBS object or nil.
Returns dictionary or nil.

52.13.17 dictionaryWithCGRect(rect as variant) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Return a dictionary representation of rect.
Notes:

Rect must be a CGRectMBS object or nil.
Returns dictionary or nil.

52.13.18 dictionaryWithCGSize(size as variant) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Return a dictionary representation of size.
Notes:

Rect must be a CGSizeMBS object or nil.
Returns dictionary or nil.

52.13.19 dictionaryWithContentsOfFile(file as folderitem) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates and returns a dictionary using the keys and values found in a file specified by a given path.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.plist")
dim d as CFDictionaryMBS = CFDictionaryMBS.dictionaryWithContentsOfFile(f)

MsgBox d.XML.Str
```

Notes:

path: A full or relative pathname. The file identified by path must contain a string representation of a property list whose root object is a dictionary. The dictionary must contain only property list objects (instances of NSData, NSDate, NSNumber, NSString, NSArray, or NSDictionary).

Returns a new dictionary that contains the dictionary at path, or nil if there is a file error or if the contents of the file are an invalid representation of a dictionary.

52.13.20 dictionaryWithContentsOfURL(URL as string) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates and returns a dictionary using the keys and values found in a resource specified by a given URL.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.plist")
dim d as CFDictionaryMBS = CFDictionaryMBS.dictionaryWithContentsOfURL(f.URLPath)

MsgBox d.XML.Str
```

Notes:

URL: An URL that identifies a resource containing a string representation of a property list whose root object is a dictionary. The dictionary must contain only property list objects (instances of NSData, NSDate, NSNumber, NSString, NSArray, or NSDictionary).

Returns a new dictionary that contains the dictionary at aURL, or nil if there is an error or if the contents of the resource are an invalid representation of a dictionary.

52.13.21 dictionaryWithHandle(Handle as Integer) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Creates a new dictionary object based on a handle value.
Notes: Will retain the reference.

52.13.22 edit as CFMutableDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: To edit a dictionary, this method returns you a CFMutableDictionaryMBS.

52.13.23 list as CFDictionaryListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all values.
Notes: This list will be invalid whenever this dictionary is destroyed.

52.13.24 Value(key as CFObjectMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: If the key is found the value for this key is returned.
Notes: Returns nil if key is not found.

52.13.25 writeToFile(file as folderitem, useAuxiliaryFile as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Writes a property list representation of the contents of the receiver to a given path.
Example:

```
dim m as new CFMutableDictionaryMBS

m.Set(NewCFStringMBS("key"), NewCFStringMBS("value"))

dim f as FolderItem = SpecialFolder.Desktop.Child("test.plist")

if m.writeToFile(f, true) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

path: The path at which to write the file. Must be an absolute URL.
useAuxiliaryFile: A flag that specifies whether the file should be written atomically.

If flag is true, the receiver is written to an auxiliary file, and then the auxiliary file is renamed to path. If flag is false, the dictionary is written directly to path. The true option guarantees that path, if it exists at

all, won't be corrupted even if the system should crash during writing.

Returns true if the file is written successfully, otherwise false.

This method recursively validates that all the contained objects are property list objects (instances of NSData, NSDate, NSNumber, NSString, NSArray, or NSDictionary) before writing out the file, and returns false if all the objects are not property list objects, since the resultant file would not be a valid property list.

If the receiver's contents are all property list objects, the file written by this method can be used to initialize a new dictionary with the class method dictionaryWithContentsOfFile or dictionaryWithContentsOfURL.

52.13.26 writeToURL(url as string, atomically as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Writes a property list representation of the contents of the receiver to a given URL.
Example:

```
dim m as new CFMutableDictionaryMBS

m.Set(NewCFStringMBS("key"), NewCFStringMBS("value"))

dim f as FolderItem = SpecialFolder.Desktop.Child("test.plist")

if m.writeTourl(f.URLPath, true) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

url: The URL to which to write the receiver.
atomically: A flag that specifies whether the output should be written atomically.

If flag is YtrueES, the receiver is written to an auxiliary location, and then the auxiliary location is renamed to aURL. If flag is false, the dictionary is written directly to aURL. The true option guarantees that aURL, if it exists at all, won't be corrupted even if the system should crash during writing. flag is ignored if aURL is of a type that cannot be written atomically.

Returns true if the location is written successfully, otherwise false.

This method recursively validates that all the contained objects are property list objects (instances of NSData, NSDate, NSNumber, NSString, NSArray, or NSDictionary) before writing out the file, and returns false if all the objects are not property list objects, since the resultant output would not be a valid property list.

If the receiver's contents are all property list objects, the location written by this method can be used to initialize a new dictionary with the class method dictionaryWithContentsOfURL or dictionaryWithContentsOfFile.

For more information about property lists, see Property List Programming Guide.

52.13.27 Properties

52.13.28 Count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts all values.
Example:

```
dim x as new CFMutableDictionaryMBS

x.Add(NewCFStringMBS("Hello"), NewCFStringMBS("World"))

MsgBox str(x.Count)
```

Notes: (Read only property)

52.14 class CFErrorMBS

52.14.1 class CFErrorMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: The Core Foundation error class.
Notes:

A CFError object encapsulates rich and extensible error information than is possible using only an error code or error string. The core attributes of a CFError object are an error domain (represented by a string), a domain-specific error code and a user info dictionary containing application specific information. Errors are required to have a domain and an error code within that domain. The optional "userInfo" dictionary may provide additional information that might be useful for the interpretation and reporting of the error. This dictionary can even contain an "underlying" error, which is wrapped as an error bubbles up through various layers.

Several well-known domains are defined corresponding to Mach, POSIX, and OSStatus errors. In addition, CFError allows you to attach an arbitrary user info dictionary to an error object, and provides the means to return a human-readable description for the error.

In general, a method should signal an error condition by—for example—returning false or nil rather than by the simple presence of an error object. The method can then optionally return an CFError object by reference, in order to further describe the error.

CFError is toll-free bridged to NSError in the Foundation framework—for more details on toll-free bridging, see Interchangeable Data Types. NSError has some additional guidelines which makes it easy to automatically report errors to users and even try to recover from them. See Error Handling Programming Guide for more information on NSError programming guidelines.

Requires Mac OS X 10.5 or newer.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

52.14.2 Blog Entries

52.14.4 Methods

52.14.5 Constructor

MBS MacCF Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

52.14.6 kCFErrorDescriptionKey as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the keys in the userInfo dictionary.
Notes:

Key to identify the description in the userInfo dictionary.
When you create a CFError, you can provide a value for this key if you do not have localizable error strings.
The description should be a complete sentence if possible, and should not contain the domain name or error

52.14.7 kCFErrorDomainCocoa as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the constants defining domains for CFError objects.
Notes: A constant that specified the Cocoa domain.

52.14.8 kCFErrorDomainMach as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the constants defining domains for CFError objects.
Notes: A constant that specified the Mach domain.

52.14.9 kCFErrorDomainOSStatus as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the constants defining domains for CFError objects.
Notes: A constant that specified the OS domain.

52.14.10 kCFErrorDomainPOSIX as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the constants defining domains for CFError objects.
Notes: A constant that specified the POSIX domain.

52.14.11 kCFErrorLocalizedDescriptionKey as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the keys in the userInfo dictionary.
Notes: Key to identify the end user-presentable description in the userInfo dictionary.

52.14.12 kCFErrorLocalizedFailureReasonKey as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the keys in the userInfo dictionary.
Notes: Key to identify the end user-presentable failure reason in the userInfo dictionary.

52.14.13 kCFErrorLocalizedRecoverySuggestionKey as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the keys in the userInfo dictionary.
Notes: Key to identify the end user-presentable recovery suggestion in the userInfo dictionary.

52.14.14 kCFErrorUnderlyingErrorKey as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: One of the keys in the userInfo dictionary.
Notes: Key to identify the underlying error in the userInfo dictionary.

52.14.15 Properties

52.14.16 Code as Integer

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns the error code for a given CFError.
Notes: (Read only property)

52.14.17 Description as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns a human-presentable description for a given error.
Notes: (Read only property)

52.14.18 Domain as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns the error domain for a given CFError.
Notes: (Read only property)

52.14.19 FailureReason as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns a human-presentable failure reason for a given error.
Notes: (Read only property)

52.14.20 RecoverySuggestion as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns a human presentable recovery suggestion for a given error.
Notes: (Read only property)

52.14.21 UserInfo as dictionary

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns the user info dictionary for a given CFError.
Notes: (Read only property)

52.15 class CFGregorianDateMBS

52.15.1 class CFGregorianDateMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for a core foundation gregorian date value.

52.15.2 Methods

52.15.3 AbsoluteTime(timezone as CFTimeZoneMBS) as CFAbsoluteTimeMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The absolute time value for this date.
Notes: Returns nil on any error.

52.15.4 DateValid as boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Are all those date properties in this object valid?

52.15.5 IsValid(flags as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns true if the requested parts of the date values are valid.
Notes:

Flags can be a combination of the following values:

kCFGregorianUnitsYears	= 1
kCFGregorianUnitsMonths	= 2
kCFGregorianUnitsDays	= 4
kCFGregorianUnitsHours	= 8
kCFGregorianUnitsMinutes	= 16
kCFGregorianUnitsSeconds	= 32
kCFGregorianAllUnits	= & hFFFFFF

Combine using BitwiseOr.

52.15.6 TimeValid as boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Are all those time properties in this object valid?

52.15.7 Valid as boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Are all those properties in this object valid?

52.15.8 Properties

52.15.9 Day as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The day value.
Notes:

Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

52.15.10 Hour as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The hour value.
Notes:

Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

52.15.11 Minute as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The minute value.
Notes:

Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

52.15.12 Month as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The month value.
Notes:

Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

52.15.13 Second as Double

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The second value.
Notes:

Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

52.15.14 Year as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The year value.
Notes:

Setting this property does not run a test for validation like Xojo's date class does.
(Read and Write property)

52.16 class CFGregorianUnitsMBS

52.16.1 class CFGregorianUnitsMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for gregorian time units.

52.16.2 Properties

52.16.3 Days as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The days.
Notes: (Read and Write property)

52.16.4 Hours as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The hours.
Notes: (Read and Write property)

52.16.5 Minutes as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The minutes.
Notes: (Read and Write property)

52.16.6 Months as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The months.
Notes: (Read and Write property)

52.16.7 Seconds as Double

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The seconds.
Notes: (Read and Write property)

52.16.8 Years as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The years.
Notes: (Read and Write property)

52.17 class CFMutableArrayMBS

52.17.1 class CFMutableArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation Array.
Notes:

If the release property is true, the destructor of this class will release the array reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFArrayMBS class.

52.17.2 Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

52.17.3 Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

52.17.4 Methods

52.17.5 Append(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends an item to this array.
Example:

```
dim a as CFMutableArrayMBS

a=NewCFMutableArrayMBS

a.Append NewCFStringMBS("Hello")

MsgBox str(a.Count)

MsgBox CFStringMBS(a.Item(0)).str
```

52.17.6 AppendArray(sourcearray as CFArrayMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds the values from an array to another array.
Notes: The whole array should be copied.
See also:

- 52.17.7 AppendArray(sourcearray as CFArrayMBS,min as Integer,max as Integer) 10010

52.17.7 AppendArray(sourcearray as CFArrayMBS,min as Integer,max as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds the values from an array to another array.
Notes:

The whole array should be copied.
Min and Max are the range to be copied. Make sure they are correct indexes!
See also:

- 52.17.6 AppendArray(sourcearray as CFArrayMBS) 10010

52.17.8 Exchange(index1 as Integer,index2 as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Exchanges the values at two indices of the array.
Notes: Make sure indexes are in range between 0 and count-1.

52.17.9 Insert(index as Integer,value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Inserts an item to this array.
Notes:

Make sure index is in range between 0 and count.
If Index=count then this function does like append.

52.17.10 Remove(index as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes the value with the given index from the array.
Notes: Make sure index is in range between 0 and count-1.

52.17.11 RemoveAll

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes all the values from the array, making it empty.

52.17.12 SetValue(index as Integer,value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Changes the value with the given index in the array.

52.18 class CFMutableAttributedStringMBS

52.18.1 class CFMutableAttributedStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The mutable version of an CoreFoundation attributed string.
Notes: Subclass of the CFAttributedStringMBS class.

52.18.6 Methods

52.18.7 AsNSMutableAttributedString as Variant

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new NSMutableAttributedStringMBS object pointing to same mutable attributed string.
Notes: For passing to functions which need a NSMutableAttributedStringMBS.

52.18.8 BeginEditing

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Marks the beginning of a series of changes.
Notes: In cases where attributed string might do a bunch of work to assure self-consistency, BeginEditing/EndEditing allow disabling that to allow deferring and coalescing any work. It's a good idea to call these around a set of related mutation calls which don't require the string to be in consistent state in between. These calls can be nested.

52.18.9 Constructor(maxLength as Integer = 0)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a mutable empty attributed string.
Notes: maxLength, if not 0, is a hard bound on the length of the attributed string; exceeding this size limit during any editing operation is a programming error. If 0, there is no limit on the length.
See also:

- 52.18.10 Constructor(str as CFAttributedStringMBS, range as CFRangeMBS) 10013
- 52.18.11 Constructor(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil) 10013

52.18.10 Constructor(str as CFAttributedStringMBS, range as CFRangeMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a sub-attributed string from the specified range.
Notes:

str: The attributed string to copy.
range: The range of the attributed string to copy. range must not exceed the bounds of Str.

Returns a new attributed string whose string and attributes are copied from the specified range of the supplied attributed string. Raises OutOfMemory exception if there was a problem copying the object. Ownership follows the Create Rule.
See also:

- 52.18.9 Constructor(maxLength as Integer = 0) 10013
- 52.18.11 Constructor(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil) 10013

52.18.11 Constructor(str as CFStringMBS, attributeDictionary as CFDictionaryMBS = nil)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an attributed string with specified string and attributes.
Notes:

str: A string that specifies the characters to use in the new attributed string. This value is copied.
attributeDictionary: A dictionary that contains the attributes to apply to the new attributed string. This value is copied.

Returns an attributed string that contains the characters from str and the attributes specified by attributes. Raises OutOfMemory exception if there was a problem in creating the attributed string.

Note that both the string and the attributes dictionary are copied. The specified attributes are applied to the whole string. If you want to apply different attributes to different ranges of the string, you should use a mutable attributed string.
See also:

- 52.18.9 Constructor(maxLength as Integer = 0) 10013
- 52.18.10 Constructor(str as CFAttributedStringMBS, range as CFRangeMBS) 10013

52.18.12 EndEditing

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Marks the end of a series of changes.
Notes: In cases where attributed string might do a bunch of work to assure self-consistency, BeginEditing/EndEditing allow disabling that to allow deferring and coalescing any work. It's a good idea to call these around a set of related mutation calls which don't require the string to be in consistent state in between. These calls can be nested.

52.18.13 MutableString as CFMutableStringMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the string for the attributed string as a mutable string, allowing editing the character contents of the string as if it were an CFMutableString.
Notes:

Attributes corresponding to the edited range are appropriately modified. If, as a result of the edit, new characters are introduced into the string, they inherit the attributes of the first replaced character from range. If no existing characters are replaced by the edit, the new characters inherit the attributes of the character preceding range if it has any, otherwise of the character following range. If the initial string is empty, the attributes for the new characters are also empty.

(Note: This function is not yet implemented and will return NULL except for toll-free bridged instances.)

52.18.14 RemoveAttribute(Range as CFRangeMBS, attrName as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Removes the value of a single attribute over the specified range, which should be valid.
Notes: It's OK for the attribute not the exist over the specified range.

52.18.15 ReplaceAttributedString(Range as CFRangeMBS, Replacement as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Replaces the attributed substring over the specified range with the attributed string specified in replacement.
Notes: range should be valid. To delete a range of the attributed string, call ReplaceString() with empty string and specified range.

52.18.16 ReplaceString(Range as CFRangeMBS, Replacement as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Modifies the string for the attributed string, much like CFString.Replace.
Notes: It's an error for range to specify characters outside the bounds of aStr.

52.18.17 SetAttribute(Range as CFRangeMBS, attrName as CFStringMBS, Value as CFObjectMBS)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Sets the value of a single attribute over the specified range, which should be valid.
Notes: value should not be nil.

52.18.18 SetAttributes(Range as CFRangeMBS, replacements as CFDictionaryMBS, clearOtherAttributes as boolean)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Sets the value of multiple attributes over the specified range, which should be valid.
Notes: If clearOtherAttributes is false, existing attributes (which aren't being replaced) are left alone; otherwise they are cleared. The dictionary should be setup for "usual" CF type usage — CFString keys, and arbitrary CFType values. Note that after this call, further mutations to the replacement dictionary

argument by the caller will not affect the contents of the attributed string.

52.19 class CFMutableBagMBS

52.19.1 class CFMutableBagMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation mutable bag.
Notes:

If the release property is true, the destructor of this class will release the set reference.
Subclass of the CFBagMBS class.

52.19.2 Methods

52.19.3 Add(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds an object to this bag.

52.19.4 Remove(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes an object in this bag.

52.19.5 RemoveAll

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes all items from this bag.

52.19.6 Replace(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces an object in this bag.

52.19.7 Set(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets an object in this bag.

52.20 class CFMutableBinaryDataMBS

52.20.1 class CFMutableBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for core foundation data.
Notes:

If the release property is true, the destructor of this class will release the data reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFBinaryDataMBS class.

52.20.2 Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

52.20.3 Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

52.20.4 Methods

52.20.5 AppendCFBinaryDataMBS(m as CFBinaryDataMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given CFBinary object.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 52.20.6 AppendCFBinaryDataMBS(m as CFBinaryDataMBS,len as Integer) 10019

52.20.6 AppendCFBinaryDataMBS(m as CFBinaryDataMBS,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given CFBinary object.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 52.20.5 AppendCFBinaryDataMBS(m as CFBinaryDataMBS) 10019

52.20.7 AppendMem(m as memoryblock)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given memoryblock.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 52.20.8 AppendMem(m as memoryblock,len as Integer) 10020

52.20.8 AppendMem(m as memoryblock,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given memoryblock.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 52.20.7 AppendMem(m as memoryblock) 10020

52.20.9 AppendStr(s as string)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given string.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 52.20.10 AppendStr(s as string,len as Integer) 10020

52.20.10 AppendStr(s as string,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the bytes from the given string.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.
See also:

- 52.20.9 AppendStr(s as string) 10020

52.20.11 Constructor(capacity as Integer)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The constructor for creating a new mutable data object.
Example:

```
// creates empty data object
dim c as new CFMutableBinaryDataMBS(10)
MsgBox str(c.Len)+" length"
```

See also:

- 52.20.12 Constructor(data as MemoryBlock) 10021
- 52.20.13 Constructor(data as string) 10021

52.20.12 Constructor(data as MemoryBlock)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a new data object with given content.
Example:

```
dim m as MemoryBlock = "Hello"
dim d as new CFMutableBinaryDataMBS(m)

MsgBox d.Str
```

See also:

- 52.20.11 Constructor(capacity as Integer) 10021
- 52.20.13 Constructor(data as string) 10021

52.20.13 Constructor(data as string)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a new data object with given content.
Example:

```
dim m as string = "Hello"
dim d as new CFMutableBinaryDataMBS(m)
```

MsgBox d.Str

See also:

- 52.20.11 Constructor(capacity as Integer) 10021
- 52.20.12 Constructor(data as MemoryBlock) 10021

52.20.14 Delete(pos as Integer,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Deletes bytes from a binary data object.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.

52.20.15 IncreaseLength(extralen as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Resizes the binary data by extralen adding additional bytes.
Notes: This method may fail on low memory, e.g. on Mac OS Classic running a Carbon application with a small application memory partition size.

52.20.16 ReplaceCFBinaryDataMBS(m as CFBinaryDataMBS,pos as Integer,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the given binary data.
See also:

- 52.20.17 ReplaceCFBinaryDataMBS(m as CFBinaryDataMBS,pos as Integer,len as Integer,newlen as Integer) 10022

52.20.17 ReplaceCFBinaryDataMBS(m as CFBinaryDataMBS,pos as Integer,len as Integer,newlen as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the given binary data.
See also:

- 52.20.16 ReplaceCFBinaryDataMBS(m as CFBinaryDataMBS,pos as Integer,len as Integer) 10022

52.20.18 ReplaceMem(m as memoryblock,pos as Integer,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the memoryblock.
See also:

- 52.20.19 ReplaceMem(m as memoryblock,pos as Integer,len as Integer,newlen as Integer) 10023

52.20.19 ReplaceMem(m as memoryblock,pos as Integer,len as Integer,newlen as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the memoryblock.
See also:

- 52.20.18 ReplaceMem(m as memoryblock,pos as Integer,len as Integer) 10023

52.20.20 ReplaceStr(s as string,pos as Integer,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the string.
See also:

- 52.20.21 ReplaceStr(s as string,pos as Integer,len as Integer,newlen as Integer) 10023

52.20.21 ReplaceStr(s as string,pos as Integer,len as Integer,newlen as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces len bytes inside the binary data which start at position pos with the bytes from the string.
See also:

- 52.20.20 ReplaceStr(s as string,pos as Integer,len as Integer) 10023

52.20.22 SetLength(len as Integer)

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Sets length of the data.

52.21 class CFMutableCharacterSetMBS

52.21.1 class CFMutableCharacterSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation character set.
Notes:

If the release property is true, the destructor of this class will release the set reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFCharacterSetMBS class.

52.21.2 Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

52.21.3 Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

52.21.4 Methods

52.21.5 AddCFStringMBS(s as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds a range of characters from the CFStringMBS.

52.21.6 AddRange(min as Integer,max as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds a range of characters from min to max to the character set.

52.21.7 Intersect(value as CFCharacterSetMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Makes a intersection between both CFCharacterSets.

52.21.8 Invert

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Inverts this character set.

52.21.9 RemoveCFStringMBS(s as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes a range of characters from the CFStringMBS.

52.21.10 RemoveRange(min as Integer,max as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes a range of characters from min to max to the character set.

52.21.11 Union(value as CFCharacterSetMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Makes a Union between both CFCharacterSets.

52.22 class CFMutableDictionaryMBS

52.22.1 class CFMutableDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation dictionary.
Notes:

If the release property is true, the destructor of this class will release the dictionary reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFDictionaryMBS class.

52.22.2 Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

52.22.3 Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

52.22.4 Methods

52.22.5 Add(key as CFObjectMBS,value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds a key value combination to the dictionary.
Example:

```
dim d as CFMutableDictionaryMBS

d=NewCFMutableDictionaryMBS
d.Add NewCFStringMBS("Key"),NewCFStringMBS("Value")
MsgBox d.XML.str
```

52.22.6 Remove(key as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes all entries with the given key.
Notes: Maybe no key is found.

52.22.7 RemoveAll

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes all entries.

52.22.8 Replace(key as CFObjectMBS,value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces all entries with the given key to contain the given value.
Notes: Maybe no key is found.

52.22.9 Set(key as CFObjectMBS,value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets the entry with the given key to the given value.
Example:

```
dim d as new CFMutableDictionaryMBS

d.Add NewCFStringMBS("Key"), NewCFStringMBS("Value")
d.Set NewCFStringMBS("Key"), NewCFStringMBS("Value2") // set changes value, add would not change
it here

MsgBox d.XML.Str
```

52.23 class CFMutableSetMBS

52.23.1 class CFMutableSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation set.
Notes:

If the release property is true, the destructor of this class will release the set reference.
Subclass of the CFSetMBS class.

52.23.2 Methods

52.23.3 Add(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds an object to this set.

52.23.4 Remove(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes an object in this set.

52.23.5 RemoveAll

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes all items from this set.

52.23.6 Replace(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces an object in this set.

52.23.7 Set(value as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets an object in this set.

52.24 class CFMutableStringMBS

52.24.1 class CFMutableStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation mutable string.
Notes:

If the release property is true, the destructor of this class will release the set reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFStringMBS class.

52.24.2 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

52.24.4 Methods

52.24.5 AppendCFStringMBS(s as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the given CFStringMBS.

52.24.6 AppendString(s as String)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends the given Xojo string.

52.24.7 Capitalize

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Changes the first character represented by a CFStringMBS object to uppercase (if it is a lowercase alphabetical character).

52.24.8 Delete(pos as Integer,len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Deletes a range of characters in a mutable CFStringMBS object.

52.24.9 Insert(index as Integer,s as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Inserts a string at a specified location in the character buffer of a mutable CFStringMBS object.

52.24.10 LocalizedCapitalize(LocaleIdentifier as String)

MBS MacCF Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Localized capitalize.
Notes:

Locale identifier can be "de", "de_DE" or "German" style.
Raises RaiseUnsupportedOperationException if locale identifier is not known.

52.24.11 LocalizedLowercase(LocaleIdentifier as String)

MBS MacCF Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Localized lowercase.
Notes:

Locale identifier can be "de", "de_DE" or "German" style.
Raises RaiseUnsupportedOperationException if locale identifier is not known.

52.24.12 LocalizedUppercase(LocaleIdentifier as String)

MBS MacCF Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Localized uppercase.
Example:

```
dim m1 as new CFMutableStringMBS("i")
dim m2 as new CFMutableStringMBS("i")

m1.Uppercase
m2.LocalizedUppercase("Turkish")

MsgBox m1.Str+EndOfLine+m2.Str
// shows to variants of capital I
```

Notes:

Locale identifier can be "de", "de_DE" or "German" style.
Raises RaiseUnsupportedOperationException if locale identifier is not known.

52.24.13 Lowercase

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Changes all uppercase alphabetical characters in a mutable CFStringMBS to lowercase.

52.24.14 Normalize(NormalizationForm as Integer)

MBS MacCF Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Normalizes the string into the specified form as described in Unicode Technical Report # 15.
Example:

```
const kCFStringNormalizationFormD = 0 // Canonical Decomposition
const kCFStringNormalizationFormKD = 1 // Compatibility Decomposition
const kCFStringNormalizationFormC = 2 // Canonical Decomposition followed by Canonical Composition
const kCFStringNormalizationFormKC = 3 // Compatibility Decomposition followed by Canonical Composition

dim s as CFStringMBS
dim m as CFMutableStringMBS

s=NewCFStringMBS("Hello é")
m=s.Normalize(kCFStringNormalizationFormD)

MsgBox str(s.Len)+" "+str(m.len)

// decomposed the length is one more.
```

Notes: Requires Mac OS X 10.2 or newer.

52.24.15 Pad(padstr as CFStringMBS,len as Integer,indexIntoPad as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Enlarges the string represented by a CFStringMBS object, padding it with specified characters, or truncates the string.
Notes:

The CFStringMBS.Pad function has two purposes. It either enlarges the character buffer of a mutable CFStringMBS object to a given length, padding the added length with a given character or characters, or it truncates the character buffer to a smaller size. The key parameter for this behavior is the length parameter; if it is greater than the current length of the represented string, padding takes place, and if it less than that length, truncation occurs.

For example, say you have a mutable CFStringMBS (aMutStr) containing the characters "abcdef". The call

CFStringMBS.Pad(newcfstring(". "), 12, 1)

results in aMutStr containing "abcdef . . .". However, the following call

CFStringMBS.Pad(nil, 3, 0)

results in aMutStr containing "abc".

52.24.16 Replace(newstr as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces the content of this CFMutableStringMBS with the one from newstr.
See also:

- 52.24.17 Replace(pos as Integer,len as Integer,newstr as CFStringMBS) 10034

52.24.17 Replace(pos as Integer,len as Integer,newstr as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Replaces the substring with the given range of this CFMutableStringMBS with the one from newstr.

See also:

- 52.24.16 Replace(newstr as CFStringMBS) 10034

52.24.18 Trim

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Trims whitespace from the beginning and end of the characters represented by a mutable CFStringMBS object.
See also:

- 52.24.19 Trim(trimchar as CFStringMBS) 10035

52.24.19 Trim(trimchar as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Trims a specified substring from the beginning and end of the character contents represented by a mutable CFStringMBS object.
See also:

- 52.24.18 Trim 10035

52.24.20 Truncate(len as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: If the string is longer than len, it is truncated to len.

52.24.21 Uppercase

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Changes all lowercase alphabetical characters in a mutable CFStringMBS object to uppercase.

52.25 class CFNumberMBS

52.25.1 class CFNumberMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation number.
Example:

```
dim n as CFNumberMBS = NewCFNumberMBSDouble(4.3)

MsgBox str(n.doubleValue)
```

Notes:

If the release property is true, the destructor of this class will release the number reference.
Subclass of the CFObjectMBS class.

52.25.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.4pr4

52.25.4 Methods

52.25.5 Compare(other as CFNumberMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Compares two CFNumbers.
Notes:

Return values:

Less Than	-1
Equal To	0
Greater Than	1

From CFNumberMBS.h:

Compares the two CFNumberMBS instances. If conversion of the types of the values is needed, the conversion and comparison follow human expectations and not C's promotion and comparison rules. Negative zero compares less than positive zero.
Positive infinity compares greater than everything except itself, to which it compares equal. Negative infinity compares less than everything except itself, to which it compares equal. Unlike standard practice, if both numbers are NaN, then they compare equal; if only one of the numbers is NaN, then the NaN compares greater than the other number if it is negative, and smaller than the other number if it is positive.

52.25.6 NewWithDouble(value as Double) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 64bit float value.

52.25.7 NewWithInt16(value as Int16) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 16bit integer value.

52.25.8 NewWithInt32(value as Int32) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 32bit integer value.

52.25.9 NewWithInt64(value as Int64) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 64bit integer value.
Example:

```
dim c as CFNumberMBS = CFNumberMBS.NewWithInt64(123456789123456789)

// shows type. 4 is signed 64-bit integer
MsgBox str(c.NumberType)+": "+str(c.int64Value)
```

52.25.10 NewWithInt8(value as Int8) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 8bit integer value.

52.25.11 NewWithSingle(value as Single) as CFNumberMBS

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new CFNumberMBS with a 32bit float value.

52.25.12 Properties

52.25.13 ByteSize as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the size in bytes of the type of the number.
Notes: (Read only property)

52.25.14 doubleValue as Double

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The value of this CFNumberMBS object.
Notes: (Read only property)

52.25.15 int16Value as Int16

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Queries value as 16bit integer.
Notes: (Read only property)

52.25.16 int32Value as Int32

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Queries value as 32bit integer.
Notes: (Read only property)

52.25.17 int64Value as Int64

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Queries value as 64bit integer.
Example:

```
dim c as CFNumberMBS = CFNumberMBS.NewWithInt64(123456789123456789)

// shows type. 4 is signed 64-bit integer
MsgBox str(c.NumberType)+": "+str(c.int64Value)
```

Notes: (Read only property)

52.25.18 int8Value as Int8

MBS MacCF Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Queries value as 8bit integer.
Notes: (Read only property)

52.25.19 integerValue as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The value of this CFNumberMBS object.
Example:

```
dim n as CFNumberMBS

n=NewCFNumberMBSInteger(45)

MsgBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

n=NewCFNumberMBSSingle(45.67)

MsgBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

n=NewCFNumberMBSDouble(45.6789)
```

```
MsgBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

// in version 5.1 of the plugins:
// 45 45 45
// 45.67 0 45.67
// 45.6789 0 0
//
// in version 5.2 of the plugins: (after a fix)
// 45 45 45
// 45.67 45 45.67
// 45.6789 45 45.6789
```

Notes:

Returns a trancated value if the number is not storeable in an integer.
(Read only property)

52.25.20 isFloat as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns TRUE if the type of the CFNumberMBS's value is one of the defined floating point types.
Notes: (Read only property)

52.25.21 NumberType as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the storage format of the CFNumberMBS's value.
Notes:

Possible values:

(Read only property)

52.25.22 singleValue as single

MBS MacCF Plugin, Platform: macOS, Targets: All.

Name	Value	Xojo Datatype
SInt8	1	-
SInt16	2	-
SInt32	3	integer
SInt64	4	-
Float32	5	single
Float64	6	double
Char	7	-
Short	8	-
Int	9	-
Long	10	integer
LongLong	11	-
Float	12	single
Double	13	double
CFIndex	14	integer

Function: The value of this CFNumberMBS object.
Example:

```
dim n as CFNumberMBS

n=NewCFNumberMBSInteger(45)

MsgBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

n=NewCFNumberMBSSingle(45.67)

MsgBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

n=NewCFNumberMBSDouble(45.6789)

MsgBox str(n.doubleValue)+" "+str(n.integerValue)+" "+str(n.singleValue)

// in version 5.1 of the plugins:
// 45 45 45
// 45.67 0 45.67
// 45.6789 0 0
//
// in version 5.2 of the plugins: (after a fix)
// 45 45 45
// 45.67 45 45.67
// 45.6789 45 45.6789
```

Notes:

Returns a trancated value if the number is not storeable in a single.
(Read only property)

52.26 class CFObjectMBS

52.26.1 class CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation object.
Example:

```
// is object is a CFStringMBS, return it a Xojo string.
Function st(o as CFObjectMBS) As string
if o isa CFStringMBS then
return CFStringMBS(o).str
end if
End Function
```

Notes: If the release property is true, the destructor of this class will release the object reference.

52.26.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1
- MBS Xojo / Real Studio Plugins, version 14.3pr2
- MBS Xojo / Real Studio Plugins, version 14.2pr10

- MBS Xojo / Real Studio Plugins, version 13.2pr5
- MBS Real Studio Plugins, version 13.0fc1

52.26.4 Methods

52.26.5 close

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

52.26.6 DeepCopy as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Creates a deep copy of the CFObject.
Notes: Copies all sub objects if the Object has sub objects (like the Dictionary).

52.26.7 EncodedData as MemoryBlock

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Returns the content of the object and all subobjects as a binary encoded plist file content.
Notes:

Returns nil on any error. For example if you have CFDictionary with keys not being CFStringMBS objects. You can write this to a plist file.

52.26.8 Equal(o as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns true if both CFObjects are equal in type and content.

52.26.9 NewCFObject(handle as Integer) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates new plugin CFObjectMBS around a handle of a CF Type.
Example:

```
// make string
dim s as CFStringMBS = NewCFStringMBS("Hello World")
```

```
// get handle
dim h as Integer = s.Handle

// get back from handel to plugin object
dim o as CFObjectMBS = CFObjectMBS.NewCFObject(h)

// and see if plugin detected a string
if o isa CFStringMBS then
dim t as CFStringMBS = CFStringMBS(o)

MsgBox t.str
end if
```

52.26.10 ReleaseObject

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Decreases the retain count of this object.
Notes: If the retain count falls below 1, the object is destroyed.

52.26.11 RetainCount as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the reference counter of the object.
Example:

```
dim o as CFObjectMBS
dim s as CFStringMBS

s=NewCFStringMBS("Hello")

MsgBox "s has "+str(s.RetainCount)+" refs in CF"
o=s

MsgBox "o has "+str(o.RetainCount)+" refs in CF"

o.RetainObject

MsgBox "o has "+str(o.RetainCount)+" refs in CF"

o.ReleaseObject
```

```
MsgBox "o has "+str(o.RetainCount)+" refs in CF"

o.Close

MsgBox "o has "+str(o.RetainCount)+" refs in CF"
```

Notes: If the retain count falls below 1, the object is destroyed.

52.26.12 RetainObject

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Increases the retain count of this object.
Example:

```
Function CFDateFromCFObject(o as cfobjectMBS) As cfdateMBS
dim d as CFDateMBS

if o<>nil then
if o.Type=kCFDateMBSTypeID then
d=new CFDateMBS
d.Handle=o.Handle
d.RetainObject
end if
end if

Exception
End Function
```

Notes: If the retain count falls below 1, the object is destroyed.

52.26.13 XML as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the content of the object and all subobjects as a XML file content.
Example:

```
// Save a dictionary in a XML file:

dim d as CFMutableDictionaryMBS
dim f as FolderItem
```

```
dim t as TextOutputStream

// Create dictionary
d=NewCFMutableDictionaryMBS
// Fill dictionary
d.Add NewCFStringMBS("Key"),NewCFStringMBS("Value")

// get file name
f=GetFolderItem("CF XML Test.txt")

// create file
t=f.CreateTextFile
// Write XML
t.Write d.XML.Str
// close file
t.Close
```

Notes:

Returns nil on any error. For example if you have CFDictionary with keys not being CFStringMBS objects.
You can write this to a plist file.

52.26.14 XMLdata as String

MBS MacCF Plugin, Plugin Version: 19.0, Platform: macOS, Targets: All.

Function: Returns the content of the object and all subobjects as a XML file content.
Notes:

Returns empty string on any error. For example if you have CFDictionary with keys not being CFStringMBS objects.
You can write this to a plist file.

52.26.15 Properties

52.26.16 Handle as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: The core foundation object references.
Notes: (Read and Write property)

52.26.17 Hash as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a hash code for this object.
Notes: (Read only property)

52.26.18 Lasterror as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The last error code reported.
Notes:

Please check each function on whether it sets the lasterror property.
(Read and Write property)

52.26.19 Type as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Type ID for this object.
Notes: (Read only property)

52.26.20 TypeDescription as String

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the type description for this object.
Notes:

e.g. "CFString" or "CFNumber".
(Read only property)

52.27 class CFPreferencesMBS

52.27.1 class CFPreferencesMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for the core foundation preferences services.
Example:

```
Sub Open()
// in a listbox on a window, list all preferences applications for the current user
dim c as CFArrayMBS
dim p as CFPreferencesMBS
dim i as Integer
dim count as Integer
dim o as CFObjectMBS
dim s as CFStringMBS

p=new CFPreferencesMBS
c=p.CopyApplicationList(p.kCFPreferencesCurrentUser, p.kCFPreferencesAnyHost)

count=c.Count-1
for i=0 to count
o=c.Item(i)
if o isa CFStringMBS then
s=CFStringMBS(o)
window1.listbox1.AddRow s.str
end if
next

Title=str(ListBox1.ListCount)+" "+Title
End Sub
```

Notes: Search for Apple Developer documentation on CFPreferences for details on functionality these plugin functions provide.

52.27.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr4

52.27.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr4

52.27.4 Methods

52.27.5 AddSuitePreferencesToApp(ApplicationID as CFStringMBS, SuiteID as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Adds a new suite to the application preferences.

52.27.6 AppSynchronize(ApplicationID as CFStringMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Synchronizes the values in the RAM with the disk for the given application.
Notes: Returns false on any error.

52.27.7 CopyAppBooleanValue(Key as CFStringMBS, ApplicationID as CFStringMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Copies the application preferences boolean value.
Notes: On an error it returns false and KeyExistsAndHasValidFormat is set to false.

52.27.8 CopyAppIntegerValue(Key as CFStringMBS, ApplicationID as CFStringMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Copies the application preferences integer value.
Notes: On an error it returns false and KeyExistsAndHasValidFormat is set to false.

52.27.9 CopyApplicationList(userName as CFStringMBS, hostName as CFStringMBS) as CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all applications which have preferences.
Example:

```
Sub Open()
// in a listbox on a window, list all preferences applications for the current user
dim c as CFArrayMBS
dim p as CFPreferencesMBS
dim i as Integer
dim count as Integer
dim o as CFObjectMBS
dim s as CFStringMBS

p=new CFPreferencesMBS
c=p.CopyApplicationList(p.kCFPreferencesCurrentUser, p.kCFPreferencesAnyHost)

count=c.Count-1
for i=0 to count
o=c.Item(i)
if o isa CFStringMBS then
s=CFStringMBS(o)
Listbox1.AddRow s.str
end if
next

Title=str(ListBox1.ListCount)+" "+Title
End Sub
```

Notes: Returns false on any error.

52.27.10 CopyAppValue(Key as CFStringMBS, ApplicationID as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Copies the application preferences value.
Example:

```
// copy names of recent items in Xojo Preferences

dim names() as string
dim c as new CFPreferencesMBS

dim o as CFObjectMBS = c.CopyAppValue(NewCFStringMBS("Recent Items Dict"), NewCFStringMBS("com.realsoftware.realstudio"))

if o isa CFArrayMBS then
dim a as CFArrayMBS = CFArrayMBS(o)
```

```
dim u as Integer = a.Count-1
for i as Integer = 0 to u

o = a.Item(i)

if o isa CFDictionaryMBS then
dim d as CFDictionaryMBS = CFDictionaryMBS(o)

dim no as CFObjectMBS = d.Value(NewCFStringMBS("Name"))
if no isa CFStringMBS then

dim ns as CFStringMBS = CFStringMBS(no)

names.Append ns.str
end if
end if
next
end if

MsgBox Join(names,EndOfLine)
```

Notes: Returns nil on any error.

52.27.11 CopyDictionary(ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Copies all preferences value.
Example:

```
dim p as new CFPreferencesMBS

p.SetValue(NewCFStringMBS("TestString"), NewCFStringMBS("Hello World"), p.kCFPreferencesCurrentApplication, p.kCFPreferencesCurrentUser, p.kCFPreferencesCurrentHost)
p.SetValue(NewCFStringMBS("TestDouble"), NewCFNumberMBSDouble(5.6), p.kCFPreferencesCurrentApplication, p.kCFPreferencesCurrentUser, p.kCFPreferencesCurrentHost)
p.SetValue(NewCFStringMBS("TestInteger"), NewCFNumberMBSInteger(3), p.kCFPreferencesCurrentApplication, p.kCFPreferencesCurrentUser, p.kCFPreferencesCurrentHost)

dim d as CFDictionaryMBS = p.CopyDictionary(p.kCFPreferencesCurrentApplication, p.kCFPreferencesCurrentUser, p.kCFPreferencesCurrentHost)
dim x as CFBinaryDataMBS = d.XML
dim s as string = x.Str
```

```
break
// check data in variable s with xml of all properties
```

Notes: Returns nil on any error.

52.27.12 CopyKeyList(ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS) as CFArrayMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all preferences keys for the given application.
Notes: Returns false on any error.

52.27.13 CopyMultiple(Key as CFArrayMBS, ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS) as CFDictionaryMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Copies several preferences value.
Notes: Returns nil on any error.

52.27.14 CopyValue(Key as CFStringMBS, ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Copies a preferences value.
Example:

```
dim c as CFPreferencesMBS
dim o as CFObjectMBS
dim a as CFStringMBS // application
dim k as CFStringMBS // key

k=NewCFStringMBS("AvailableLanguages")
a=NewCFStringMBS("com.apple.systempreferences")

c=new CFPreferencesMBS
```

```
o=c.CopyValue(k,a,c.kCFPreferencesCurrentUser,c.kCFPreferencesAnyHost)

CFShowMBS o

// Shows in the console application something like this:
//
// <CFArray >{ type = mutable-small, count = 2, values = (
// 0 : <CFString >{ contents = "en" }
// 1 : <CFString >{ contents = "de" }
// ) }
```

Notes: Returns nil on any error.

52.27.15 kCFPreferencesAnyApplication as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

52.27.16 kCFPreferencesAnyHost as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

52.27.17 kCFPreferencesAnyUser as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

52.27.18 kCFPreferencesCurrentApplication as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

52.27.19 kCFPreferencesCurrentHost as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

52.27.20 kCFPreferencesCurrentUser as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A constant for preferences functions of Mac OS X.

52.27.21 RemoveSuitePreferencesFromApp(ApplicationID as CFStringMBS, SuiteID as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Removes a new suite to the application preferences.

52.27.22 SetAppValue(Key as CFStringMBS, value as CFObjectMBS, ApplicationID as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets an application preferences value.
Notes: Note that on saveing all strings are internally converted to UTF-8.

52.27.23 SetMultiple(KeysToSet as CFDictionaryMBS, KeysToRemove as CFArrayMBS, ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets several preferences values.
Notes: Note that on saveing all strings are internally converted to UTF-8.

52.27.24 SetValue(Key as CFStringMBS, Value as CFObjectMBS, ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS)

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Sets a preferences value.
Notes: Note that on saveing all strings are internally converted to UTF-8.

52.27.25 Synchronize(ApplicationID as CFStringMBS, userName as CFStringMBS, hostName as CFStringMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Synchronizes the values in the RAM with the disk for the given application.
Notes: Returns false on any error.

52.27.26 Properties

52.27.27 KeyExistsAndHasValidFormat as Boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Set by CopyAppBooleanValue and CopyAppIntegerValue.
Notes: (Read and Write property)

52.28 class CFRangeMBS

52.28.1 class CFRangeMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The class for a CFRange.
Notes: A range of sequential items in a container, such as characters in a buffer or elements in a collection.

- 12.4, page 9: News

52.28.6 Methods

52.28.7 Constructor(location as Integer = 0, length as Integer = 0)

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a new range with given values.

52.28.8 Properties

52.28.9 length as Integer

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: An integer representing the number of items in the range.
Notes: (Read and Write property)

52.28.10 location as Integer

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: An integer representing the starting location of the range.
Notes: (Read and Write property)

52.29 class CFSetListMBS

52.29.1 class CFSetListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for the items of a CFSetMBS.

52.29.2 Methods

52.29.3 Value(index as Integer) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the value with the given index.

52.29.4 Properties

52.29.5 Count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts the items in the set.
Notes: (Read and Write property)

52.30 class CFSetMBS

52.30.1 class CFSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation set.
Notes:

If the release property is true, the destructor of this class will release the set reference.
Subclass of the CFObjectMBS class.

52.30.2 Methods

52.30.3 clone as CFSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Clones the set and all values.

52.30.4 Constructor

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: Creates a new editable set object.
Example:

```
dim e as new CFMutableSetMBS
e.Add(NewCFStringMBS("Hello"))
MsgBox str(e.Count)
```

52.30.5 ContainsValue(value as CFObjectMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does the set contain this value?

52.30.6 CountValue(value as CFObjectMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts how often this value is inside the set.

52.30.7 edit as CFMutableSetMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: To edit a set, this method returns you a CFMutableSetMBS.

52.30.8 list as CFSetListMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a list of all values.
Notes: This list will be invalid whenever this set is destroyed.

52.30.9 Value(value as CFObjectMBS) as CFObjectMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: If the value is found the value is returned.
Notes: Returns nil if key is not found.

52.30.10 Properties

52.30.11 Count as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Counts all values.
Example:

```
dim x as new CFMutableSetMBS

x.Set(NewCFStringMBS("Hello"))

MsgBox str(x.Count)
```

Notes: (Read only property)

52.31 class CFStringMBS

52.31.1 class CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation string.
Example:

```
dim s as CFStringMBS
dim t as CFStringMBS
dim x as string
dim o as CFObjectMBS

s=NewCFStringMBS("hello")

// make XML as string
x=s.XML.str

// recreate object from XML
o=NewCFObjectMBSFromXML(NewCFBinaryDataMBSStr(x))

if o isa CFStringMBS then
t=CFStringMBS(o)

// show string content
MsgBox t.str
end if
```

Notes:

If the release property is true, the destructor of this class will release the string reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

52.31.4 Methods

52.31.5 Character(index as Integer) as string

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the character from this string with the given index.
Notes: The returned Xojo string contains a Unicode character.

52.31.6 Characters(pos as Integer,len as Integer) as string

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the characters from this string in the given range.
Notes: The returned Xojo string contains Unicode characters.

52.31.7 Compare(other as CFStringMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Compares two strings.
Notes:

Return values:

Less Than	-1
Equal To	0
Greater Than	1
Function not available	-2

See also:

- 52.31.8 Compare(other as CFStringMBS, CaseInsensitive as boolean) as Integer 10064
- 52.31.9 Compare(other as CFStringMBS, CaseInsensitive as boolean, Numerically as boolean) as Integer 10064
- 52.31.10 Compare(other as CFStringMBS, Options as Integer) as Integer 10065

52.31.8 Compare(other as CFStringMBS, CaseInsensitive as boolean) as Integer

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: All.

Function: Compares two strings.
Notes:

Return values:

Less Than	-1
Equal To	0
Greater Than	1
Function not available	-2

See also:

- 52.31.7 Compare(other as CFStringMBS) as Integer 10063
- 52.31.9 Compare(other as CFStringMBS, CaseInsensitive as boolean, Numerically as boolean) as Integer 10064
- 52.31.10 Compare(other as CFStringMBS, Options as Integer) as Integer 10065

52.31.9 Compare(other as CFStringMBS, CaseInsensitive as boolean, Numerically as boolean) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Compares two strings.
Example:

```
dim s as CFStringMBS
dim t as CFStringMBS
dim n1,n2 as Integer

s=NewCFStringMBS("Hello7.txt")
t=NewCFStringMBS("Hello10.txt")
n1=s.Compare(t,false)
```

```
n2=s.Compare(t,false,true)

MsgBox "Without nummerical: "+str(n1)+", With nummerical: "+str(n2)+"."
```

Notes:

Numerically works only if Mac OS X 10.2 or newer is running.

Return values:

Less Than	-1
Equal To	0
Greater Than	1
Function not available	-2

See also:

- 52.31.7 Compare(other as CFStringMBS) as Integer 10063
- 52.31.8 Compare(other as CFStringMBS, CaseInsensitive as boolean) as Integer 10064
- 52.31.10 Compare(other as CFStringMBS, Options as Integer) as Integer 10065

52.31.10 Compare(other as CFStringMBS, Options as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 7.1, Platform: macOS, Targets: All.

Function: Compares two strings.
Example:

```
// Just a quick and dirty test for this function:

dim s(10) as string
dim i as Integer
dim temp as string
dim isDirty as boolean
dim a,b as CFStringMBS

s(1)="Apfel"
s(2)="Strasse"
s(3)="Bäum"
s(4)="Straße"
s(5)="Zaun"
s(6)="äpfel"
```

```
s(7)="bäum"
s(8)="Baum"
s(9)="Äpfel"
s(10)="Ende"

// if kCFCompareLocalized is used, the Äpfel come near Apfel.

const kCFCompareCaseInsensitive = 1
const kCFCompareBackwards = 4 //* Starting from the end of the string */
const kCFCompareAnchored = 8 //* Only at the specified starting point */
const kCFCompareNonliteral = 16 //* If specified, loose equivalence is performed (o-umlaut == o, umlaut)
*/
const kCFCompareLocalized = 32 //* User's default locale is used for the comparisons */
const kCFCompareNumerically = 64 //* Numeric comparison is used; that is, Foo2.txt <Foo7.txt <Foo25.txt
*/

'Sortieren
do
isDirty = false// we haven't touched anything yet
for i = 1 to 10-1// loop through all the numbers

a=NewCFStringMBS(s(i))
b=NewCFStringMBS(s(i+1))

if a.Compare(b,kCFCompareLocalized)>0 then
temp = s(i+1)
s(i+1) = s(i)
s(i) = temp
isDirty = true// we touched the data so mark it as dirty
end
next
loop until isDirty = false// if we made it without touching the data thenwe are done

for i=1 to 10
EditField1.text=EditField1.text + s(i) + chr(13)
next i
```

Notes:

Numerically works only if Mac OS X 10.2 or newer is running.

Return values:

See also:

Less Than	-1
Equal To	0
Greater Than	1
Function not available	-2

- 52.31.7 Compare(other as CFStringMBS) as Integer 10063
- 52.31.8 Compare(other as CFStringMBS, CaseInsensitive as boolean) as Integer 10064
- 52.31.9 Compare(other as CFStringMBS, CaseInsensitive as boolean, Numerically as boolean) as Integer 10064

52.31.11 Constructor(text as string = "")

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a new CFString.
Example:

```
dim c as new CFStringMBS("Hello")
MsgBox c
```

52.31.12 Edit as CFMutableStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a mutable string.

52.31.13 ExactFind(stringtofind as CFStringMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Finds the given string.
Notes: Exactly, so case sensitive.

52.31.14 Find(stringtofind as CFStringMBS) as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Finds the given string.

52.31.15 HasPrefix(s as CFStringMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does this string start with s.

52.31.16 HasSuffix(s as CFStringMBS) as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Does this string end with s.

52.31.17 Mid(pos as Integer,len as Integer) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns a new CFStringMBS with a substring from the current CFStringMBS.
Notes: Compare to Mid in RB.

52.31.18 Normalize(NormalizationForm as Integer) as CFMutableStringMBS

MBS MacCF Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Normalizes the string into the specified form as described in Unicode Technical Report # 15.
Example:

```
const kCFStringNormalizationFormD = 0 // Canonical Decomposition
const kCFStringNormalizationFormKD = 1 // Compatibility Decomposition
const kCFStringNormalizationFormC = 2 // Canonical Decomposition followed by Canonical Composition
const kCFStringNormalizationFormKC = 3 // Compatibility Decomposition followed by Canonical Composition

dim s as CFStringMBS
dim m as CFMutableStringMBS

s=NewCFStringMBS("Hello é")
m=s.Normalize(kCFStringNormalizationFormD)

MsgBox str(s.Len)+" "+str(m.len)

// decomposed the length is one more.
```

Notes:

Requires Mac OS X 10.2 or newer.
Returns nil on any error.

52.31.19 Operator_Convert as String

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: An internal method for Xojo 5.x.
Example:

```
dim s as cfstringmbs
s=NewCFStringMBS("Hello")
msgbox s
```

Notes:

This method is used by Xojo 5.x to allow you to directly create a Xojo string based on a CoreFoundation string.
Xojo may create a NilObjectException if the cfstring object is nil.
See also:

- 52.31.20 Operator_Convert(v As String) 10069

52.31.20 Operator_Convert(v As String)

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

Function: An internal method for Xojo 5.x.
Example:

```
dim s as cfstringmbs
s="Hello"
// replaces: s=NewCFStringMBS("Hello")
```

Notes: This method is used by Xojo 5.x to allow you to directly create a corefoundation string object based on a Xojo string.
See also:

- 52.31.19 Operator_Convert as String 10069

52.31.21 stringWithHandle(Handle as Integer) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Creates a new string object based on a handle value.
Notes: Will retain the reference.

52.31.22 Properties

52.31.23 DisplayString as String

MBS MacCF Plugin, Plugin Version: 10.1, Platform: macOS, Targets: All.

Function: For the debugger the string of this CFString reduced to maximum of 1000 characters.
Notes: (Read only property)

52.31.24 DoubleValue as Double

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the string interpreted as an double value.
Example:

```
dim d as CFStringMBS = NewCFStringMBS("3.4")
MsgBox str(d.DoubleValue)
```

Notes:

Compare to val.
Skips whitespace; returns 0.0 on error.
(Read only property)

52.31.25 FastestEncoding as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Obtains the encoding for the characters in a CFString that requires the least conversion time.
Notes:

-1 on Windows.
(Read only property)

52.31.26 IntegerValue as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the string interpreted as an integer value.
Example:

```
dim d as CFStringMBS = NewCFStringMBS("3.4")
MsgBox str(d.IntegerValue) // shows 3
```

Notes:

Compare to val.
Skips whitespace; returns 0 on error, MAX or -MAX on overflow.
(Read only property)

52.31.27 Len as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the length in chars of the string.
Notes: (Read only property)

52.31.28 SmallestEncoding as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Obtains the smallest encoding on the current system for the character contents of a CFString object.
Notes:

Value is -1 on Windows and Mac OS Classic.
(Read only property)

52.31.29 Str as String

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the string data as Xojo string.
Notes:

Returns the string in a one byte encoding. If possible ASCII string, else if possible MacRoman encoded else UTF8.

(Read and Write computed property)

52.31.30 UStr as String

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the string data as Xojo unicode string (16bit).
Deprecated: This item is deprecated and should no longer be used. You can use Str instead. **Notes:**

If the string can not be returned as an unicode string, this function returns it as a normal string in System script (e.g. MacRoman).
(Read and Write computed property)

52.32 class CFTimeIntervalMBS

52.32.1 class CFTimeIntervalMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for a time interval value.
Notes: The time interval is basicly a double property inside the class.

52.32.2 Properties

52.32.3 Value as Double

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The value of the class.
Notes: (Read and Write property)

52.33 class CFTimeZoneMBS

52.33.1 class CFTimeZoneMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for a core foundation time zone.
Example:

```
dim t as new CFTimeZoneMBS
MsgBox t.Name.str
```

Notes: Subclass of the CFObjectMBS class.

52.33.2 Methods

52.33.3 Abbreviation(atTime as CFAbsoluteTimeMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The abbreviation for the given timezone name.
Example:

```
dim t as new CFTimeZoneMBS
MsgBox t.Abbreviation(nil)
```

Notes:

Returns nil on any error.
As the name may change depending on whether it's daylight saving time, you should give an absolute time value.

52.33.4 Constructor

MBS MacCF Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: A constructor which fills the object with the system timezone.
Example:

```
dim CFDateLocal as new CFAbsoluteTimeMBS
dim CFTimeZone as new CFTimeZoneMBS
```

```
dim MyDSTState as Boolean = CFTimeZone.IsDaylightSavingTime(CFDateLocal)

MsgBox str(MyDSTState)
```

52.33.5 Data as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The binary data for the timezone.
Example:

```
dim t as new CFTimeZoneMBS
MsgBox t.Data.Str
```

52.33.6 IsDaylightSavingTime(atTime as CFAbsoluteTimeMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether it's daylight saving time at the given absolute time.
Example:

```
// get current timezone
dim c as CFTimeZoneMBS = SystemCFTimeZoneMBS

// and current time
dim time as CFAbsoluteTimeMBS = CurrentCFAbsoluteTimeMBS

// Do we have daylight saving time?
MsgBox str(c.IsDaylightSavingTime(time))
```

52.33.7 Name as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The name of the timezone.
Example:

```
dim s as CFTimeZoneMBS
s=SystemCFTimeZoneMBS
MsgBox s.Name
```

52.33.8 SecondsFromGMT(atTime as CFAbsoluteTimeMBS) as CFTimeIntervalMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the time difference to GMT for the given time (for daylight saving).
Example:

```
dim s as cfTimeZoneMBS
s=SystemCFTimeZoneMBS
MsgBox str(s.SecondsFromGMT(nil).Value) // 3600 in Germany
```

Notes: Returns nil on any error.

52.34 class CFTreeMBS

52.34.1 class CFTreeMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for the CoreFoundation tree collection.
Notes:

An CFXMLTree is simply a CFTree whose context data is known to be an CFXMLNode. As such, an CFXMLTree can be used to represent an entire XML document; the CFTree provides the tree structure of the document, while the CFXMLNodes identify and describe the nodes of the tree. An XML document can be parsed to a CFXMLTree, and a CFXMLTree can generate the data for the equivalent XML document.
Subclass of the CFObjectMBS class.

52.34.3 Blog Entries

- MBS REALbasic Plugins, version 10.4pr13

52.34.4 Methods

52.34.5 AppendChild(tree as CFTreeMBS)

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Appends a tree as a child.
Example:

```
dim documentinfo as new CFXMLDocumentInfoMBS
dim docnode as new CFXMLNodeMBS
dim instructionNode as new CFXMLNodeMBS
dim xmldocument as new CFTreeMBS
dim rootInfo as new CFXMLElementInfoMBS
dim rootNode as new CFXMLNodeMBS
dim rootTree as new CFTreeMBS
dim nameInfo as new CFXMLElementInfoMBS
dim nameNode as new CFXMLNodeMBS
dim nameTree as new CFTreeMBS
dim nameTextNode as new CFXMLNodeMBS
dim nameTextTree as new CFTreeMBS
dim nameTextNode2 as new CFXMLNodeMBS
```

```
dim nameTextTree2 as new CFTreeMBS
dim root as CFStringMBS

const kCFStringEncodingUTF8=& h08000100

// create a document node
documentinfo.SourceURL=nil
documentinfo.CFStringEncoding=kCFStringEncodingUTF8

docnode.CreateDocument(documentinfo)

xmldocument.CreateWithXMLNode docNode

// root element

rootInfo.XMLAttributes=nil
rootInfo.AttributeOrder=nil
rootInfo.IsEmpty=false

root=NewCFStringMBS("root")
rootNode.CreateElement root, rootInfo
rootTree.CreateWithXMLNode rootNode

nameInfo.XMLAttributes=nil
nameInfo.AttributeOrder=nil
nameInfo.IsEmpty=false

namenode.CreateElement NewCFStringMBS("FirstName"), nameInfo
nameTree.CreateWithXMLNode nameNode
rootTree.AppendChild nameTree

nameTextNode.CreateText NewCFStringMBS("Dean")
nameTextTree.CreateWithXMLNode nameTextNode
nameTree.AppendChild nameTextTree

nameInfo.XMLAttributes=nil
nameInfo.AttributeOrder=nil
nameInfo.IsEmpty=false

namenode.CreateElement NewCFStringMBS("LastName"), nameInfo
nameTree.CreateWithXMLNode nameNode
rootTree.AppendChild nameTree

nameTextNode2.CreateText NewCFStringMBS("Davis")
nameTextTree2.CreateWithXMLNode nameTextNode2
nameTree.AppendChild nameTextTree2

CFShowMBS(xmldocument)
```

xmldocument.AppendChild rootTree

MsgBox xmldocument.XMLData.str

// shows "<root><FirstName>Dean</FirstName><LastName>Davis</LastName></root>"

52.34.6 ChildAtIndex(index as Integer) as CFTreeMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the child with the given index.
Notes: nil on any error.

52.34.7 ChildCount as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the number of child nodes.
Notes: 0 on any error.

52.34.8 Children as CFTreeMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the child tree node.
Notes: nil on any error.

52.34.9 Create

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a new empty tree and stores the handle in this object.
Notes: Handle is 0 on failure.

52.34.10 CreateFromXMLData(data as CFBinaryDataMBS, url as CFURLMBS, ParseOptions as Integer)

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a new XMLTree from the given data.
Notes:

URL is needed to resolve external references.

These are the various options you can configure the parser with. These are chosen such that an option flag of 0 (kCFXMLParserNoOptions) leaves the XML as "intact" as possible (reports all structures; performs no replacements).
Hence, to make the parser do the most work, returning only the pure element tree, set the option flag to kCFXMLParserAllOptions:

kCFXMLParserValidateDocument	1	validate the document against its grammar from the DTD, reporting any errors. Currently not supported.
kCFXMLParserSkipMetaData	2	silently skip over metadata constructs (the DTD and comments)
kCFXMLParserReplacePhysicalEntities	4	replace declared entities like & lt;. Note that other than the 5 predefined entities (lt, gt, quot, amp, apos), these must be defined in the DTD. Currently not supported.
kCFXMLParserSkipWhitespace	8	skip over all whitespace that does not abut non-whitespace character data. In other words, given <foo><bar>blah </bar></foo>, the whitespace between foo's open tag and bar's open tag would be suppressed, but the whitespace around blah would be preserved.
kCFXMLParserResolveExternalEntities	16	
kCFXMLParserAddImpliedAttributes	32	where the DTD specifies implied attribute-value pairs for a particular element, add those pairs to any occurances of the element in the element tree. Currently not supported.
kCFXMLParserAllOptions	& hFFFFFF	
kCFXMLParserNoOptions	0	

52.34.11 CreateWithXMLDataFromURL(URL as CFURLMBS, ParseOptions as Integer)

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a new XMLTree from the given data at the URL.
Notes:

The handle property is set if the function is successfull.

These are the various options you can configure the parser with. These are chosen such that an option flag of 0 (kCFXMLParserNoOptions) leaves the XML as "intact" as possible (reports all structures; performs no replacements).
Hence, to make the parser do the most work, returning only the pure element tree, set the option flag to kCFXMLParserAllOptions:

kCFXMLParserValidateDocument	1	validate the document against its grammar from the DTD, reporting any errors. Currently not supported.
kCFXMLParserSkipMetaData	2	silently skip over metadata constructs (the DTD and comments)
kCFXMLParserReplacePhysicalEntities	4	replace declared entities like & lt;. Note that other than the 5 predefined entities (lt, gt, quot, amp, apos), these must be defined in the DTD. Currently not supported.
kCFXMLParserSkipWhitespace	8	skip over all whitespace that does not abut non-whitespace character data. In other words, given <foo><bar>blah </bar></foo>, the whitespace between foo's open tag and bar's open tag would be suppressed, but the whitespace around blah would be preserved.
kCFXMLParserResolveExternalEntities	16	
kCFXMLParserAddImpliedAttributes	32	where the DTD specifies implied attribute-value pairs for a particular element, add those pairs to any occurances of the element in the element tree. Currently not supported.
kCFXMLParserAllOptions	& hFFFFFF	
kCFXMLParserNoOptions	0	

52.34.12 CreateWithXMLNode(node as CFXMLNodeMBS)

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a XML tree based on the given node.

52.34.13 FindRoot as CFTreeMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the tree root node.
Notes: nil on any error.

52.34.14 FirstChild as CFTreeMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the first child node.
Notes: nil on any error.

52.34.15 InsertSibling(tree as CFTreeMBS)

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Inserts a new tree as the sibling of this tree.

52.34.16 NextSibling as CFTreeMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the next sibiling.
Notes: nil on any error.

52.34.17 Parent as CFTreeMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the parent of the tree.
Notes: nil on any error.

52.34.18 PrependChild(tree as CFTreeMBS)

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Inserts a new tree as the first child.

52.34.19 Remove

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Removes this tree from its parent.

52.34.20 RemoveAllChildren

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Removes all child nodes.

52.34.21 XMLBinaryData as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates XML Data from the tree.
Notes:

Generate the XMLData (ready to be written to whatever permanent storage is to be used) from an CFXMLTree. Will NOT regenerate entity references (except those required for syntactic correctness) if they were replaced at the parse time; clients that wish this should walk the tree and re-insert any entity references that should appear in the final output file.

Returns nil on any error.
Renamed from XMLData to XMLBinaryData for version 19.0.

52.34.22 XMLNode as CFXMLNodeMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the xml node for this tree node.
Notes: nil on any error.

52.35 class CFURLMBS

52.35.1 class CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: A class for a core foundation boolean.
Notes:

If the release property is true, the destructor of this class will release the url reference.
This class works on Windows with QuickTime 7 installed.
Subclass of the CFObjectMBS class.

52.35.4 Methods

52.35.5 AbsoluteURL as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the absolute URL.
Notes: A URL contains normally a base and a relative part. This function creates one absolute URL from those parts.

52.35.6 AppendPathComponent(pathcomponent as CFStringMBS,isDirectory as boolean) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends a path component to this URL.

52.35.7 AppendPathExtension(extension as CFStringMBS) as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Appends a path extension to this URL.

52.35.8 BaseURL as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the base URL.
Notes: A URL contains normally a base and a relative part.

52.35.9 CanBeDecomposed as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Can this url be decomposed?

52.35.10 Constructor(File as FolderItem)

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates new CFURLMBS based on given folderitem.
Notes: Raises exception if not called on macOS or called with invalid URL.
See also:

- 52.35.11 Constructor(URL as string) 10086

52.35.11 Constructor(URL as string)

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates new CFURLMBS based on given URL.
Notes: Raises exception if not called on macOS or called with invalid URL.
See also:

- 52.35.10 Constructor(File as FolderItem) 10085

52.35.12 Data(encoding as Integer, escapeWhitespace as boolean) as CFBinaryDataMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the URL as binary data using the given encoding.

52.35.13 DeleteLastPathComponent as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Deletes the last path component of this URL.

52.35.14 DeletePathExtension as CFURLMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Deletes the path extension of this URL.

52.35.15 DisplayName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 2.9, Platform: macOS, Targets: All.

Function: Returns the display name for the url.
Notes: Returns "" on any error.

52.35.16 file as folderitem

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the URL as a folderitem.
Notes: Works only on RB 4.5 or later and if the file exists.

52.35.17 Fragment(charactersToLeaveEscaped as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Fragment part of this URL.

52.35.18 HasDirectoryPath as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Has this URL a directory path?

52.35.19 HFSFileSystemPath as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the URL as HFSFileSystemPath.

52.35.20 HostName as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the HostName part of this URL.

52.35.21 isAbsolutePath as boolean

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Is the path an absolute path?

52.35.22 kCFURLAddedToDirectoryDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

The date the resource was created, or renamed into or within its parent directory. Note that inconsistent behavior may be observed when this attribute is requested on hard-linked items. This property is not supported by all volumes. (Read-only, value type CFDateMBS)
for macOS 10.10 or later.

52.35.23 kCFURLApplicationIsScriptableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

True if the resource is scriptable. Only applies to applications. (Read-only, value type CFBooleanMBS)
for macOS 10.11 or later.

52.35.24 kCFURLAttributeModificationDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The time the resource's attributes were last modified (Read-only, value type CFDateMBS)

52.35.25 kCFURLCanonicalPathKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

the URL's path as a canonical absolute file system path (Read-only, value type CFStringMBS)
for macOS 10.12 or later.

52.35.26 kCFURLContentAccessDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The date the resource was last accessed (Read-only, value type CFDateMBS)

52.35.27 kCFURLContentModificationDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The time the resource content was last modified (Read-write, value type CFDateMBS)

52.35.28 kCFURLCreationDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The date the resource was created (Read-write, value type CFDateMBS)

52.35.29 kCFURLDocumentIdentifierKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

The document identifier – a value assigned by the kernel to a document (which can be either a file or directory) and is used to identify the document regardless of where it gets moved on a volume. The document identifier survives "safe save" operations; i.e it is sticky to the path it was assigned to (NSURL -replaceItemAtURL:withItemAtURL:backupItemName:options:resultingItemURL:error: is the preferred safe-save API). The document identifier is persistent across system restarts. The document identifier is not transferred when the file is copied. Document identifiers are only unique within a single volume. This property is not supported by all volumes. (Read-only, value type CFNumberMBS)
for macOS 10.10 or later.

52.35.30 kCFURLFileAllocatedSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total size allocated on disk for the file in bytes (number of blocks times block size) (Read-only, value type CFNumberMBS)

52.35.31 kCFURLFileResourceIdentifierKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: An identifier which can be used to compare two file system objects for equality using CFObjectMBS.Equal (i.e, two object identifiers are equal if they have the same file system path or if the paths are linked to same inode on the same file system). This identifier is not persistent across system restarts. (Read-only, value type CFObjectMBS)

52.35.32 kCFURLFileResourceTypeBlockSpecial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: Special block device.

52.35.33 kCFURLFileResourceTypeCharacterSpecial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: Special charset device.

52.35.34 kCFURLFileResourceTypeDirectory as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: A folder.

52.35.35 kCFURLFileResourceTypeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

Returns the file system object type. (Read-only, value type CFStringMBS)
for macOS 10.7 or later.

52.35.36 kCFURLFileResourceTypeNamedPipe as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: A named pipe.

52.35.37 kCFURLFileResourceTypeRegular as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: Regular file.

52.35.38 kCFURLFileResourceTypeSocket as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: A network socket.

52.35.39 kCFURLFileResourceTypeSymbolicLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: An symbolic link.

52.35.40 kCFURLFileResourceTypeUnknown as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the file resource type values.
Notes: Unknown.

52.35.41 kCFURLFileSecurityKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The file system object's security information encapsulated in a CFFileSecurity object. (Read-write, value type CFFileSecurity)

52.35.42 kCFURLFileSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total file size in bytes (Read-only, value type CFNumberMBS)

52.35.43 kCFURLGenerationIdentifierKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

An opaque generation identifier which can be compared using CFObjectMBS.Equal() to determine if the data in a document has been modified. For URLs which refer to the same file inode, the generation identifier will change when the data in the file's data fork is changed (changes to extended attributes or other file system metadata do not change the generation identifier). For URLs which refer to the same directory inode, the generation identifier will change when direct children of that directory are added, removed or renamed (changes to the data of the direct children of that directory will not change the generation identifier). The generation identifier is persistent across system restarts. The generation identifier is tied to a specific document on a specific volume and is not transferred when the document is copied to another volume. This property is not supported by all volumes. (Read-only, value type CFObjectMBS)
for macOS 10.10 or later.

52.35.44 kCFURLHasHiddenExtensionKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for resources whose filename extension is removed from the localized name property (Read-write, value type CFBooleanMBS)

52.35.45 kCFURLIsAliasFileKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the resource is a Finder alias file or a symlink, false otherwise (Read-only, value type CFBooleanMBS)

52.35.46 kCFURLIsApplicationKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

True if resource is an application (Read-only, value type CFBooleanMBS)
for macOS 10.11 or later.

52.35.47 kCFURLIsDirectoryKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for directories (Read-only, CFBooleanMBS)

52.35.48 kCFURLIsExcludedFromBackupKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if resource should be excluded from backups, false otherwise (Read-write, value type CFBooleanMBS). This property is only useful for excluding cache and other application support files which are not needed in a backup. Some operations commonly made to user documents will cause this property to be reset to false and so this property should not be used on user documents.
for macOS 10.8 or later.

52.35.49 kCFURLIsExecutableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if this process (as determined by EUID) can execute a file resource or search a directory resource. (Read-only, value type CFBooleanMBS)

for mac OS 10.7 or later.

52.35.50 kCFURLIsHiddenKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

True for resources normally not displayed to users (Read-write, value type CFBooleanMBS).

If the resource is a hidden because its name starts with a period, setting this property to false will not change the property.

52.35.51 kCFURLIsMountTriggerKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if this URL is a file system trigger directory. Traversing or opening a file system trigger will cause an attempt to mount a file system on the trigger directory. (Read-only, value type CFBooleanMBS)
for macOS 10.7 or later.

52.35.52 kCFURLIsPackageKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test")
dim c as CFURLMBS = NewCFURLMBSFile(f)

dim v as Variant
dim e as CFErrorMBS

if c.ResourcePropertyForKey(c.kCFURLIsPackageKey, v1, e) then
dim p as CFBooleanMBS = v

MsgBox "IsPackage: "+str(p.Value)
else
MsgBox "Error: "+e.Description
```

end if

Notes:

True for packaged directories (Read-only 10.6 and 10.7, read-write 10.8, value type CFBooleanMBS).

You can only set or clear this property on directories; if you try to set this property on non-directory objects, the property is ignored. If the directory is a package for some other reason (extension type, etc), setting this property to false will have no effect.

52.35.53 kCFURLIsReadableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if this process (as determined by EUID) can read the resource. (Read-only, value type CFBooleanMBS) for macOS 10.7 or later.

52.35.54 kCFURLIsRegularFileKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for regular files (Read-only, value type CFBooleanMBS)

52.35.55 kCFURLIsSymbolicLinkKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for symlinks (Read-only, value type CFBooleanMBS)

52.35.56 kCFURLIsSystemImmutableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for system-immutable resources (Read-write, value type CFBooleanMBS)

52.35.57 kCFURLIsUbiquitousItemKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if this item is synced to the cloud, false if it is only a local file. (Read-only, value type CFBooleanMBS) for macOS 10.7 or newer.

52.35.58 kCFURLIsUserImmutableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for user-immutable resources (Read-write, value type CFBooleanMBS)

52.35.59 kCFURLIsVolumeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: True for the root directory of a volume (Read-only, value type CFBooleanMBS)

52.35.60 kCFURLIsWritableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if this process (as determined by EUID) can write to the resource. (Read-only, value type CFBoolean-MBS)
for mac OS 10.7 or later.

52.35.61 kCFURLLabelNumberKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The label number assigned to the resource (Read-write, value type CFNumberMBS)

52.35.62 kCFURLLinkCountKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Number of hard links to the resource (Read-only, value type CFNumberMBS)

52.35.63 kCFURLLocalizedLabelKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The user-visible label text (Read-only, value type CFStringMBS)

52.35.64 kCFURLLocalizedNameKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Localized or extension-hidden name as displayed to users (Read-only, value type CFStringMBS)

52.35.65 kCFURLLocalizedTypeDescriptionKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: User-visible type or ”kind” description (Read-only, value type CFStringMBS)

52.35.66 kCFURLNameKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The resource name provided by the file system (Read-write, value type CFStringMBS)

52.35.67 kCFURLParentDirectoryURLKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The resource's parent directory, if any (Read-only, value type CFURLMBS)

52.35.68 kCFURLPathKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

the URL's path as a file system path (Read-only, value type CFStringMBS)
for macOS 10.8 or later.

52.35.69 kCFURLPreferredIOBlockSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The optimal block size when reading or writing this file's data, or NULL if not available. (Read-only, value type CFNumberMBS)

52.35.70 kCFURLQuarantinePropertiesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

The quarantine properties as defined in LSQuarantine.h. To remove quarantine information from a file, pass kCFNull as the value when setting this property. (Read-write, value type CFDictionaryMBS)
for macOS 10.10 or later.

52.35.71 kCFURLTagNamesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

The array of Tag names (Read-write, value type CFArrayMBS of CFStringMBS)
for macOS 10.9 or later.

52.35.72 kCFURLTotalFileAllocatedSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total allocated size of the file in bytes (this may include space used by metadata), or nil if not available. This can be less than the value returned by kCFURLTotalFileSizeKey if the resource is compressed. (Read-only, value type CFNumberMBS)

52.35.73 kCFURLTotalFileSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total displayable size of the file in bytes (this may include space used by metadata), or NULL if not available. (Read-only, value type CFNumberMBS)

52.35.74 kCFURLTypeIdentifierKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Uniform type identifier (UTI) for the resource (Read-only, value type CFStringMBS)

52.35.75 kCFURLUbiquitousItemDownloadingErrorKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

returns the error when downloading the item from iCloud failed. See the NSUbiquitousFile section in FoundationErrors.h. (Read-only, value type CFErrorMBS)
for macOS 10.9 or later.

52.35.76 kCFURLUbiquitousItemDownloadingStatusCurrent as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the download status values.
Notes:

there is a local version of this item and it is the most up-to-date version known to this device.
for macOS 10.9 or later.

52.35.77 kCFURLUbiquitousItemDownloadingStatusDownloaded as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the download status values.
Notes:

there is a local version of this item available. The most current version will get downloaded as soon as possible.
for macOS 10.9 or later.

52.35.78 kCFURLUbiquitousItemDownloadingStatusKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

Returns the download status of this item. (Read-only, value type CFStringMBS).
for macOS 10.9 or later.

52.35.79 kCFURLUbiquitousItemDownloadingStatusNotDownloaded as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the download status values.
Notes:

this item has not been downloaded yet. Use NSFileManager's startDownloadingUbiquitousItemAtURL:error: to download it.
for macOS 10.9 or later.

52.35.80 kCFURLUbiquitousItemHasUnresolvedConflictsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if this item has conflicts outstanding. (Read-only, value type CFBooleanMBS)

52.35.81 kCFURLUbiquitousItemIsDownloadedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Equivalent to NSURLUbiquitousItemDownloadingStatusKey = NSURLUbiquitousItemDownloadingStatusCurrent. Has never behaved as documented in earlier releases, hence deprecated. (Read-only, value type CFBooleanMBS)

52.35.82 kCFURLUbiquitousItemIsDownloadingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if data is being downloaded for this item. (Read-only, value type CFBooleanMBS)

52.35.83 kCFURLUbiquitousItemIsExcludedFromSyncKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 21.5, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

Value is a boolean.
The item is excluded from sync, which means it is locally on disk but won't be available on the server. An excluded item is no longer ubiquitous.

52.35.84 kCFURLUbiquitousItemIsUploadedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if there is data present in the cloud for this item. (Read-only, value type CFBooleanMBS)

52.35.85 kCFURLUbiquitousItemIsUploadingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if data is being uploaded for this item. (Read-only, value type CFBooleanMBS)

52.35.86 kCFURLUbiquitousItemPercentDownloadedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

Percent downloaded.
Use NSMetadataQuery and NSMetadataUbiquitousItemPercentDownloadedKey on NSMetadataItem instead.

52.35.87 kCFURLUbiquitousItemPercentUploadedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

Percent uploaded.
Use NSMetadataQuery and NSMetadataUbiquitousItemPercentUploadedKey on NSMetadataItem instead

52.35.88 kCFURLUbiquitousItemUploadingErrorKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

returns the error when uploading the item to iCloud failed. See the NSUbiquitousFile section in FoundationErrors.h. (Read-only, value type CFErrorMBS)
for macOS 10.9 or later.

52.35.89 kCFURLVolumeAvailableCapacityKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total free space in bytes (Read-only, value type CFNumberMBS)

52.35.90 kCFURLVolumeCreationDateKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The volume's creation date, or nil if this cannot be determined. (Read-only, value type CFDateMBS)

52.35.91 kCFURLVolumeIdentifierKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: An identifier that can be used to identify the volume the file system object is on. Other objects on the same volume will have the same volume identifier and can be compared using for equality using CFObjectMBS.Equal. This identifier is not persistent across system restarts. (Read-only, value type CFObjectMBS)

52.35.92 kCFURLVolumeIsAutomountedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume is automounted. Note: do not mistake this with the functionality provided by kCFURLVolumeSupportsBrowsingKey. (Read-only, value type CFBooleanMBS)

52.35.93 kCFURLVolumeIsBrowsableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume should be visible via the GUI (i.e., appear on the Desktop as a separate volume). (Read-only, value type CFBooleanMBS)

52.35.94 kCFURLVolumeIsEjectableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume's media is ejectable from the drive mechanism under software control. (Read-only, value type CFBooleanMBS)

52.35.95 kCFURLVolumeIsEncryptedKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if the volume is encrypted. (Read-only, value type CFBooleanMBS)
for macOS 10.12 or later.

52.35.96 kCFURLVolumeIsInternalKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume's device is connected to an internal bus, false if connected to an external bus, or nil if not available. (Read-only, value type CFBooleanMBS)

52.35.97 kCFURLVolumeIsJournalingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume is currently using a journal for speedy recovery after an unplanned restart. (Read-only, value type CFBooleanMBS)

52.35.98 kCFURLVolumeIsLocalKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume is stored on a local device. (Read-only, value type CFBooleanMBS)

52.35.99 kCFURLVolumeIsReadOnlyKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume is read-only. (Read-only, value type CFBooleanMBS)

52.35.100 kCFURLVolumeIsRemovableKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume's media is removable from the drive mechanism. (Read-only, value type CFBooleanMBS)

52.35.101 kCFURLVolumeIsRootFileSystemKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if the volume is the root filesystem. (Read-only, value type CFBooleanMBS)
for macOS 10.12 or later.

52.35.102 kCFURLVolumeLocalizedFormatDescriptionKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The user-visible volume format (Read-only, value type CFStringMBS)

52.35.103 kCFURLVolumeLocalizedNameKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The user-presentable name of the volume (Read-only, value type CFStringMBS)

52.35.104 kCFURLVolumeMaximumFileSizeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The largest file size (in bytes) supported by this file system, or nil if this cannot be determined. (Read-only, value type CFNumberMBS)

52.35.105 kCFURLVolumeNameKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The name of the volume (Read-write, settable if kCFURLVolumeSupportsRenamingKey is true and permissions allow, value type CFStringMBS)

52.35.106 kCFURLVolumeResourceCountKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total number of resources on the volume (Read-only, value type CFNumberMBS)

52.35.107 kCFURLVolumeSupportsAdvisoryFileLockingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume implements whole-file flock(2) style advisory locks, and the O_EXLOCK and O_SHLOCK flags of the open(2) call. (Read-only, value type CFBooleanMBS)

52.35.108 kCFURLVolumeSupportsCasePreservedNamesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format preserves the case of file and directory names. Otherwise the volume may change the case of some characters (typically making them all upper or all lower case). (Read-only, value type CFBooleanMBS)

52.35.109 kCFURLVolumeSupportsCaseSensitiveNamesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format treats upper and lower case characters in file and directory names as different. Otherwise an upper case character is equivalent to a lower case character, and you can't have two names that differ solely in the case of the characters. (Read-only, value type CFBooleanMBS)

52.35.110 kCFURLVolumeSupportsCompressionKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if the volume supports transparent decompression of compressed files using decmpfs. (Read-only, value type CFBooleanMBS)
for macOS 10.12.

52.35.111 kCFURLVolumeSupportsExclusiveRenamingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if the volume supports renamex_np(2)'s RENAME_EXCL option (Read-only, value type CFBoolean-MBS)
for macOS 10.12 or later.

52.35.112 kCFURLVolumeSupportsExtendedSecurityKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume implements extended security (ACLs). (Read-only, value type CFBooleanMBS)

52.35.113 kCFURLVolumeSupportsFileCloningKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if the volume supports clonefile(2) (Read-only, value type CFBooleanMBS)
for macOS 10.12 or later.

52.35.114 kCFURLVolumeSupportsHardLinksKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format supports hard links (Read-only, value type CFBooleanMBS)

52.35.115 kCFURLVolumeSupportsJournalingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format supports a journal used to speed recovery in case of unplanned restart (such as a power outage or crash). This does not necessarily mean the volume is actively using a journal. (Read-only, value type CFBooleanMBS)

52.35.116 kCFURLVolumeSupportsPersistentIDsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format supports persistent object identifiers and can look up file system objects by their IDs (Read-only, value type CFBooleanMBS)

52.35.117 kCFURLVolumeSupportsRenamingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume can be renamed. (Read-only, value type CFBooleanMBS)

52.35.118 kCFURLVolumeSupportsRootDirectoryDatesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if the volume supports reliable storage of times for the root directory. (Read-only, value type CF-BooleanMBS)
for macOS 10.7 or later.

52.35.119 kCFURLVolumeSupportsSparseFilesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format supports sparse files, that is, files which can have 'holes' that have never been written to, and thus do not consume space on disk. A sparse file may have an allocated size on disk that is less than its logical length. (Read-only, value type CFBooleanMBS)

52.35.120 kCFURLVolumeSupportsSwapRenamingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes:

true if the volume supports renamex_np(2)'s RENAME_SWAP option (Read-only, value type CFBoolean-MBS)
for macOS 10.12 or later.

52.35.121 kCFURLVolumeSupportsSymbolicLinksKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume format supports symbolic links (Read-only, value type CFBooleanMBS)

52.35.122 kCFURLVolumeSupportsVolumeSizesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: true if the volume supports returning volume size values (kCFURLVolumeTotalCapacityKey and kCFURLVolumeAvailableCapacityKey). (Read-only, value type CFBooleanMBS)

52.35.123 kCFURLVolumeSupportsZeroRunsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: For security reasons, parts of a file (runs) that have never been written to must appear to contain zeroes. true if the volume keeps track of allocated but unwritten runs of a file so that it can substitute zeroes

without actually writing zeroes to the media. (Read-only, value type CFBooleanMBS)

52.35.124 kCFURLVolumeTotalCapacityKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: Total volume capacity in bytes (Read-only, value type CFNumberMBS)

52.35.125 kCFURLVolumeURLForRemountingKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The CFURLMBS needed to remount a network volume, or nil if not available. (Read-only, value type CFURLMBS)

52.35.126 kCFURLVolumeURLKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: URL of the volume on which the resource is stored (Read-only, value type CFURLMBS)

52.35.127 kCFURLVolumeUUIDStringKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: One of the resource keys.
Notes: The volume's persistent UUID as a string, or nil if a persistent UUID is not available for the volume. (Read-only, value type CFStringMBS)

52.35.128 Kind as CFStringMBS

MBS MacCF Plugin, Plugin Version: 2.9, Platform: macOS, Targets: All.

Function: Returns the kind string for the file.

52.35.129 LastPathComponent as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the LastPathComponent part of this URL.

52.35.130 Launch as Integer

MBS MacCF Plugin, Plugin Version: 2.9, Platform: macOS, Targets: All.

Function: Launches a file.
Notes: Returns a Mac OS error string or -1 if the function is not available.

52.35.131 NetLocation as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the NetLocation part of this URL.

52.35.132 ParameterString(charactersToLeaveEscaped as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ParameterString part of this URL.

52.35.133 Password as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Password part of this URL.

52.35.134 Path as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the Path part of this URL.
See also:

- 52.35.135 Path(resolveAgainstBase as boolean) as string

52.35.135 Path(resolveAgainstBase as boolean) as string

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the path of this URL.
See also:

- 52.35.134 Path as CFStringMBS 10112

52.35.136 PathExtension as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the PathExtension part of this URL.

52.35.137 PortNumber as Integer

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the PortNumber part of this URL.
Notes: Returns -1 if no port specified and -2 on Windows and Mac OS Classic.

52.35.138 PosixFileSystemPath as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the URL as PosixFileSystemPath.

52.35.139 QueryString(charactersToLeaveEscaped as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the QueryString part of this URL.

52.35.140 ResourcePropertyForKey(key as CFStringMBS, byref value as Variant, byref error as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Returns the resource value identified by a given resource key.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test")
dim c as CFURLMBS = NewCFURLMBSFile(f)

dim v as Variant
dim e as CFErrorMBS

if c.ResourcePropertyForKey(c.kCFURLIsPackageKey, v1, e) then
dim p as CFBooleanMBS = v

MsgBox "IsPackage: "+str(p.Value)
else
MsgBox "Error: "+e.Description
end if
```

Notes:

key: The resource key that identifies the resource property.
Value: On output when the result is true, the resource value or nil.
error: On output when the result is false, the error that occurred.

Returns true if value is successfully populated; false if an error occurs.

ResourcePropertyForKey first checks if the URL object already caches the resource value. If so, it returns the cached resource value to the caller. If not, then ResourcePropertyForKey synchronously obtains the resource value from the backing store, adds the resource value to the URL object's cache, and returns the resource value to the caller. The type of the resource value varies by resource property (see resource key definitions). If this function returns true and v alue is populated with nil, it means the resource property is not available for the specified resource and no errors occurred when determining the resource property was not available. If this function returns false, the optional error is populated. This function is currently applicable only to URLs for file system resources.

52.35.141 ResourceSpecifier as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the ResourceSpecifier part of this URL.

52.35.142 Scheme as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the scheme part of this URL.

52.35.143 SetResourcePropertyForKey(key as CFStringMBS, value as Variant, byref error as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Sets the resource value identified by a given resource key.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("test")
Dim c As CFURLMBS = NewCFURLMBSFile(f)

Dim e As CFErrorMBS

If c.SetResourcePropertyForKey(c.kCFURLIsPackageKey, NewCFBooleanMBS(true), e) Then
MsgBox "OK"
Else
MsgBox "Error: "+e.Description
End If
```

Notes:

key: The resource key that identifies the resource property.
Value: The resource value.
error: On output when the result is false, the error that occurred.

Returns true if the attempt to set the resource value completed with no errors; otherwise, false.

CFURLSetResourcePropertyForKey writes the new resource value out to the backing store. Attempts to set a read-only resource property or to set a resource property not supported by the resource are ignored and are not considered errors. If this function returns false, the optional error is populated. This function is currently applicable only to URLs for file system resources.

52.35.144 Str as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the URL as binary data.

52.35.145 StrictPath as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the StrictPath part of this URL.

52.35.146 URLWithHandle(Handle as Integer) as CFURLMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Creates a new URL object based on a handle value.
Notes: Will retain the reference.

52.35.147 UserName as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the UserName part of this URL.

52.35.148 WindowsFileSystemPath as CFStringMBS

MBS MacCF Plugin, Platform: macOS, Targets: All.

Function: Returns the URL as WindowsFileSystemPath.

52.35.149 Properties

52.35.150 AddedToDirectoryDate as CFDateMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The date the resource was created, or renamed into or within its parent directory.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
dim u as CFURLMBS = NewCFURLMBSFile(f)
dim d as CFDateMBS = u.AddedToDirectoryDate
dim t as CFTimeZoneMBS = SystemCFTimeZoneMBS
dim x as CFGregorianDateMBS = d.AbsoluteTime.GregorianDate(t)
dim y as new date(x.Year, x.Month, x.Day, x.Hour, x.Minute, x.Second)
MsgBox "AddedToDirectoryDate: " + y.SQLDateTime
```

Notes:

Note that inconsistent behavior may be observed when this attribute is requested on hard-linked items. This property is not supported by all volumes.
(Read only property)

52.35.151 AttributeModificationDate as CFDateMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The time the resource's attributes were last modified.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
dim u as CFURLMBS = NewCFURLMBSFile(f)
dim d as CFDateMBS = u.AttributeModificationDate
dim t as CFTimeZoneMBS = SystemCFTimeZoneMBS
dim x as CFGregorianDateMBS = d.AbsoluteTime.GregorianDate(t)
dim y as new date(x.Year, x.Month, x.Day, x.Hour, x.Minute, x.Second)
MsgBox "AttributeModificationDate: " + y.SQLDateTime
```

Notes: (Read only property)

52.35.152 ContentAccessDate as CFDateMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The date the resource was last accessed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
dim u as CFURLMBS = NewCFURLMBSFile(f)
dim d as CFDateMBS = u.ContentAccessDate
dim t as CFTimeZoneMBS = SystemCFTimeZoneMBS
dim x as CFGregorianDateMBS = d.AbsoluteTime.GregorianDate(t)
dim y as new date(x.Year, x.Month, x.Day, x.Hour, x.Minute, x.Second)
MsgBox "ContentAccessDate: " + y.SQLDateTime
```

Notes: (Read only property)

52.35.153 ContentModificationDate as CFDateMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The time the resource content was last modified.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
dim u as CFURLMBS = NewCFURLMBSFile(f)
dim d as CFDateMBS = u.ContentModificationDate
dim t as CFTimeZoneMBS = SystemCFTimeZoneMBS
dim x as CFGregorianDateMBS = d.AbsoluteTime.GregorianDate(t)
dim y as new date(x.Year, x.Month, x.Day, x.Hour, x.Minute, x.Second)
MsgBox "ContentModificationDate: " + y.SQLDateTime
```

Notes: (Read only property)

52.35.154 CreationDate as CFDateMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The date the resource was created.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
dim u as CFURLMBS = NewCFURLMBSFile(f)
dim d as CFDateMBS = u.CreationDate
dim t as CFTimeZoneMBS = SystemCFTimeZoneMBS
dim x as CFGregorianDateMBS = d.AbsoluteTime.GregorianDate(t)
dim y as new date(x.Year, x.Month, x.Day, x.Hour, x.Minute, x.Second)
MsgBox "CreationDate: " + y.SQLDateTime
```

Notes: (Read only property)

52.35.155 HasHiddenExtension as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for resources whose filename extension is removed from the localized name property.
Notes: (Read only property)

52.35.156 IsAlias as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Whether this is an alias file.
Notes:

true if the resource is a Finder alias file or a symlink, false otherwise.
(Read only property)

52.35.157 IsApplication as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True if resource is an application.
Notes: (Read only property)

52.35.158 IsDirectory as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for directories.
Notes: (Read only property)

52.35.159 IsHidden as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for resources normally not displayed to users.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
dim u as CFURLMBS = NewCFURLMBSFile(f)
MsgBox "IsHidden: "+str(u.IsHidden.Value)
```

Notes:

If the resource is a hidden because its name starts with a period, setting this property to false will not change the property.
(Read only property)

52.35.160 IsPackage as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for packaged directories.
Notes:

Note: You can only set or clear this property on directories; if you try to set this property on non-directory objects, the property is ignored. If the directory is a package for some other reason (extension type, etc), setting this property to false will have no effect.
(Read only property)

52.35.161 IsRegularFile as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for regular files.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
dim u as CFURLMBS = NewCFURLMBSFile(f)
MsgBox "IsRegularFile: "+str(u.IsRegularFile.Value)
```

Notes: (Read only property)

52.35.162 IsSymbolicLink as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for symlinks.
Notes: (Read only property)

52.35.163 IsSystemImmutable as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for system-immutable resources.
Notes: (Read only property)

52.35.164 IsUserImmutable as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for user-immutable resources.
Notes: (Read only property)

52.35.165 IsVolume as CFBooleanMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: True for the root directory of a volume.
Notes: (Read only property)

52.35.166 LocalizedName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Localized or extension-hidden name as displayed to users.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
dim u as CFURLMBS = NewCFURLMBSFile(f)
MsgBox u.LocalizedName
```

Notes: (Read only property)

52.35.167 Name as CFStringMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: The resource name provided by the file system.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("blog.html")
dim u as CFURLMBS = NewCFURLMBSFile(f)
MsgBox u.Name
```

Notes: (Read only property)

52.36 class CFUUIDMBS

52.36.1 class CFUUIDMBS

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: The Core Foundation class for an unique identifier.
Example:

```
dim u as new CFUUIDMBS
MsgBox u.StringValue
```

Notes:

CFUUID objects are used by plug-ins to uniquely identify types, interfaces, and factories. When creating a new type, host developers must generate UUIDs to identify the type as well as its interfaces and factories.

UUIDs (Universally Unique Identifiers), also known as GUIDs (Globally Unique Identifiers) or IIDs (Interface Identifiers), are 128-bit values guaranteed to be unique. A UUID is made unique over both space and time by combining a value unique to the computer on which it was generated—usually the Ethernet hardware address—and a value representing the number of 100-nanosecond intervals since October 15, 1582 at 00:00:00.

The standard format for UUIDs represented in ASCII is a string punctuated by hyphens, for example 68753A44-4D6F-1226-9C60-0050E4C00067. The hex representation looks, as you might expect, like a list of numerical values preceded by & h. For example, & hD7, & h36, & h95, & h0A, & h4D, & h6E, & h12, & h26, & h80, & h3A, & h00, & h50, & hE4, & hC0, & h00, & h67 . To use a UUID, you simply create it and then copy the resulting strings into your header and C language source files. Because a UUID is expressed simply as an array of bytes, there are no endianness considerations for different platforms.

You can create a CFUUID object, and thereby generate a UUID, using any one of the Constructors.
Subclass of the CFObjectMBS class.

52.36.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

52.36.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

52.36.4 Methods

52.36.5 Bytes as Memoryblock

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns the value of a UUID object as raw bytes.
Example:

```
// create new UUID

dim u as new CFUUIDMBS

// get raw data

dim m as MemoryBlock = u.Bytes

// display

MsgBox EncodingToHexMBS(m)+EndOfLine+u.StringValue
```

Notes: Returns the value of uuid represented as raw bytes.

52.36.6 Constructor

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Creates a Universally Unique Identifier (UUID) object.
Example:

```
dim u as new CFUUIDMBS
MsgBox u.StringValue
```

Notes: Returns a new CFUUID object or nil on any failure.
See also:

- 52.36.7 Constructor(Bytes as Memoryblock) 10123
- 52.36.8 Constructor(uuidStr as string) 10124

52.36.7 Constructor(Bytes as Memoryblock)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Creates a CFUUID object from raw UUID bytes.
Example:

```
// create new UUID

dim u as new CFUUIDMBS

// get raw data

dim m as MemoryBlock = u.Bytes

// create new UUID with this bytes

dim v as new CFUUIDMBS(m)

// display UUIDs:

MsgBox u.StringValue+EndOfLine+v.StringValue

if u.Equal(v) then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

Notes:

bytes: Raw UUID bytes to use to create the CFUUID object.

Rerturns a new CFUUID object or nil on any error.
See also:

- 52.36.6 Constructor 10123
- 52.36.8 Constructor(uuidStr as string) 10124

52.36.8 Constructor(uuidStr as string)

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Creates a CFUUID object for a specified string.
Example:

```
// create new UUID

dim u as new CFUUIDMBS
```

```
// get string

dim s as string = u.StringValue

// create new UUID with this string

dim v as new CFUUIDMBS(s)

// display UUIDs:

MsgBox u.StringValue+EndOfLine+v.StringValue

if u.Equal(v) then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

Notes:

uuidStr: A string containing a UUID. The standard format for UUIDs represented in ASCII is a string punctuated by hyphens, for example 68753A44-4D6F-1226-9C60-0050E4C00067.

Returns a new CFUUID object, or if a CFUUID object of the same value already exists, the existing instance with its reference count incremented. Returns nil on any error.

If you need to validate a GUID or UUID, please check the IsGUID function in our FAQ.
See also:

- 52.36.6 Constructor 10123
- 52.36.7 Constructor(Bytes as Memoryblock) 10123

52.36.9 StringValue as string

MBS MacCF Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Returns the string representation of a specified CFUUID object.
Example:

```
dim u as new CFUUIDMBS
MsgBox u.StringValue
```

52.37 class CFXMLAttributeDeclarationInfoMBS

52.37.1 class CFXMLAttributeDeclarationInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class with data for a XML attribute declaration.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.37.2 Properties

52.37.3 AttributeName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The name of the attribute.
Notes: (Read and Write property)

52.37.4 DefaultString as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The default string for this attribute.
Notes: (Read and Write property)

52.37.5 TypeString as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The type string for this attribute.
Notes: (Read and Write property)

52.38 class CFXMLAttributeListDeclarationInfoMBS

52.38.1 class CFXMLAttributeListDeclarationInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class with data for a xml attribute list declaration.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.38.2 Methods

52.38.3 Item(index as Integer) as CFXMLAttributeDeclarationInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the item with the given index.
Notes:

Index is from 0 to count-1.
Returns nil on any error.

52.38.4 Properties

52.38.5 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The number of items in this list.
Notes: (Read and Write property)

52.39 class CFXMLDocumentInfoMBS

52.39.1 class CFXMLDocumentInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for additional information about a xml document.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.39.2 Properties

52.39.3 CFStringEncoding as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The encoding used for the xml source data string.
Notes:

Useful constants:

kCFStringEncodingInvalidId	& hFFFFFFFF	Binary data
kCFStringEncodingMacRoman	0	Mac OS Classic
kCFStringEncodingWindowsLatin1	& h0500	ANSI codepage 1252
kCFStringEncodingISOLatin1	& h0201	ISO 8859-1
kCFStringEncodingNextStepLatin	& h0B01	NextStep encoding
kCFStringEncodingASCII	& h0600	0..127
kCFStringEncodingUnicode	& h0100	kTextEncodingUnicodeDefault + kTextEncodingDefaultFormat (aka kUnicode16BitFormat)
kCFStringEncodingUTF8	& h08000100	kTextEncodingUnicodeDefault + kUnicodeUTF8Format
kCFStringEncodingNonLossyASCII	& h0BFF	7bit Unicode variants used by YellowBox & Java

(same as RB's internal encoding values)
(Read and Write property)

52.39.4 SourceURL as CFURLMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The source URL for this document.
Notes: (Read and Write property)

52.40 class CFXMLDocumentTypeInfoMBS

52.40.1 class CFXMLDocumentTypeInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for additional information for a xml document type.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.40.2 Properties

52.40.3 ExternalID as CFXMLExternalIDMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A reference to the document type.
Notes: (Read and Write property)

52.41 class CFXMLElementInfoMBS

52.41.1 class CFXMLElementInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class with additional xml element info.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.41.2 Properties

52.41.3 AttributeOrder as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The order of the attributes.
Notes: (Read and Write property)

52.41.4 IsEmpty as Boolean

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Unkown.
Notes: (Read and Write property)

52.41.5 XMLAttributes as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The attributes of this element.
Notes:

Renamed Attributes parameter to XMLAttributes in plugin version 8.2.
(Read and Write property)

52.42 class CFXMLElementTypeDeclarationInfoMBS

52.42.1 class CFXMLElementTypeDeclarationInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class with additional information on a xml element type declaration.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.42.2 Properties

52.42.3 ContentDescription as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The content description.
Notes: (Read and Write property)

52.43 class CFXMLEntityInfoMBS

52.43.1 class CFXMLEntityInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for additional information on a xml entity.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.43.2 Properties

52.43.3 EntityID as CFXMLExternalIDMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: An external reference.
Notes:

EntityID.systemID will be NULL if entityType is internal.
(Read and Write property)

52.43.4 EntityType as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The type of entity.
Notes:

Useful constants:

kCFXMLEntityTypeParameter	0	Implies parsed, internal
kCFXMLEntityTypeParsedInternal	1	
kCFXMLEntityTypeParsedExternal	2	
kCFXMLEntityTypeUnparsed	3	
kCFXMLEntityTypeCharacter	4	

(Read and Write property)

52.43.5 NotationName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The notation name.
Notes:

Nil if entityType is parsed.
(Read and Write property)

52.43.6 ReplacementText as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The replacement text.
Notes:

Nil if entityType is external or unparsed.
(Read and Write property)

52.44 class CFXMLEntityReferenceInfoMBS

52.44.1 class CFXMLEntityReferenceInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for additional information on a xml entity reference.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.44.2 Properties

52.44.3 EntityType as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The type of entity.
Notes:

Useful constants:

kCFXMLEntityTypeParameter	0	Implies parsed, internal
kCFXMLEntityTypeParsedInternal	1	
kCFXMLEntityTypeParsedExternal	2	
kCFXMLEntityTypeUnparsed	3	
kCFXMLEntityTypeCharacter	4	

(Read and Write property)

52.45 class CFXMLExternalIDMBS

52.45.1 class CFXMLExternalIDMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for an external xml ID.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.45.2 Properties

52.45.3 PublicID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The public ID.
Notes: (Read and Write property)

52.45.4 SystemID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The system ID.
Notes: (Read and Write property)

52.46 class CFXMLNodeMBS

52.46.1 class CFXMLNodeMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for a xml node.
Example:

```
dim documentinfo as new CFXMLDocumentInfoMBS
dim docnode as new CFXMLNodeMBS
dim instructionNode as new CFXMLNodeMBS
dim xmldocument as new CFTreeMBS
dim instructionTree as new CFTreeMBS
dim instructionInfo as new CFXMLProcessingInstructionInfoMBS
dim personInfo as new CFXMLElementInfoMBS
dim personNode as new CFXMLNodeMBS
dim personTree as new CFTreeMBS
dim nameInfo as new CFXMLElementInfoMBS
dim nameNode as new CFXMLNodeMBS
dim nameTree as new CFTreeMBS
dim nameTextNode as new CFXMLNodeMBS
dim nameTextTree as new CFTreeMBS
dim nameTextNode2 as new CFXMLNodeMBS
dim nameTextTree2 as new CFTreeMBS
dim person as CFStringMBS

const kCFStringEncodingUTF8=& h08000100

// create a document node
documentinfo.SourceURL=nil
documentinfo.CFStringEncoding=kCFStringEncodingUTF8

docnode.CreateDocument(documentinfo)

xmldocument.CreateWithXMLNode docNode

// Instruction Tag

instructionInfo.DataString=NewCFStringMBS("version=""1.0"" encoding=""utf-8"" ")
instructionNode.CreateProcessInstruction(NewCFStringMBS("xml"),instructionInfo)
instructionTree.CreateWithXMLNode(instructionNode)

// root element

personInfo.XMLAttributes=nil
personInfo.AttributeOrder=nil
personInfo.IsEmpty=false
```

```
person=NewCFStringMBS("person")
personNode.CreateElement person, personInfo
personTree.CreateWithXMLNode personNode

nameInfo.XMLAttributes=nil
nameInfo.AttributeOrder=nil
nameInfo.IsEmpty=false

namenode.CreateElement NewCFStringMBS("name"), nameInfo
nameTree.CreateWithXMLNode nameNode
personTree.AppendChild nameTree

nameTextNode.CreateText NewCFStringMBS("Apple")
nameTextTree.CreateWithXMLNode nameTextNode
nameTree.AppendChild nameTextTree

nameTextNode2.CreateText NewCFStringMBS("Orange")
nameTextTree2.CreateWithXMLNode nameTextNode2
nameTree.AppendChild nameTextTree2

CFShowMBS(xmldocument)

xmldocument.AppendChild instructionTree
xmldocument.AppendChild personTree

MsgBox xmldocument.XMLData.str

// shows "<?xml version="1.0" encoding="utf-8" ?><person><name>AppleOrange</name></person>"
```

Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.
Notes:

An CFXMLNode describes an individual XML construct - like a tag, or a comment, or a string of character data. Each CFXMLNode contains 3 main pieces of information - the node's type, the data string, and a pointer to an additional data structure. The node's type ID is an enum value of type CFXMLNodeTypeCode. The data string is always a CFStringRef; the meaning of the string is dependent on the node's type ID. The format of the additional data is also dependent on the node's type; in general, there is a custom structure for each type that requires additional data. See below for the mapping from type ID to meaning of the data string and structure of the additional data.

Type codes for the different possible XML nodes; this list may grow:

Subclass of the CFObjectMBS class.

Constant name	value	Meaning of Data string	Additional information
kCFXMLNodeTypeDocument	1	<currently unused>	CFXMLDocumentInfoMBS
kCFXMLNodeTypeElement	2	tag name	CFXMLElementInfoMBS
kCFXMLNodeTypeAttribute	3	<currently unused>	<currently unused>
kCFXMLNodeTypeProcessingInstruction	4	name of the target	CFXMLProcessingInstructionInfoMBS
kCFXMLNodeTypeComment	5	text of the comment	nil
kCFXMLNodeTypeText	6	the text's contents	nil
kCFXMLNodeTypeCDATASection	7	text of the CDATA	nil
kCFXMLNodeTypeDocumentFragment	8	<currently unused>	<currently unused>
kCFXMLNodeTypeEntity	9	name of the entity	CFXMLEntityInfoMBS
kCFXMLNodeTypeEntityReference	10	name of the referenced entity	CFXMLEntityReferenceInfoMBS
kCFXMLNodeTypeDocumentType	11	name given as top-level element	CFXMLDocumentTypeInfoMBS
kCFXMLNodeTypeWhitespace	12	text of the whitespace	nil
kCFXMLNodeTypeNotation	13	notation name	CFXMLNotationInfoMBS
kCFXMLNodeTypeElementTypeDeclaration	14	tag name	CFXMLElementTypeDeclarationInfoMBS
kCFXMLNodeTypeAttributeListDeclaration	15	tag name	CFXMLAttributeListDeclarationInfoMBS

52.46.2 Blog Entries

- MBS Xojo Plugins, version 20.5pr4
- MBS REALbasic Plugins, version 10.4pr13

52.46.3 Blog Entries

- MBS Xojo Plugins, version 20.5pr4
- MBS REALbasic Plugins, version 10.4pr13

52.46.4 Methods

52.46.5 Copy as CFXMLNodeMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a copy of the xml node and any data inside.

52.46.6 CreateAttribute

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates an attribute based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.7 CreateAttributeListDeclaration(TagName as CFStringMBS, data as CFXMLAttributeListDeclarationInfoMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates an attribute list declaration based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.8 CreateCDATASection(text as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a CData section based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.9 CreateComment(comment as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a comment based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.10 CreateDocument(documentinfo as CFXMLDocumentInfoMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a document based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.11 CreateDocumentFragment

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a document fragment based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.12 CreateDocumentType(Name as CFStringMBS, data as CFXMLDocumentTypeInfoMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a document type based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.13 CreateElement(TagName as CFStringMBS, data as CFXMLElementInfoMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates an element based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.14 CreateElementTypeDeclaration(TagName as CFStringMBS, data as CFXMLElementTypeDeclarationInfoMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates an element type based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.15 CreateEntity(EntityName as CFStringMBS, data as CFXMLEntityInfoMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates an entity based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.16 CreateEntityReference(EntityReferenceName as CFStringMBS, data as CFXMLEntityReferenceInfoMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates an entity reference based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.17 CreateNotation(NotationName as CFStringMBS, data as CFXMLNotationInfoMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a notation based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.18 CreateProcessInstruction(Target as CFStringMBS, data as CFXMLProcessingInstructionInfoMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a process instruction based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.19 CreateText(text as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a text based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.20 CreateWhitespace(text as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates whitespace based on the given data.
Notes: If this function is successfull, the handle is set to a non zero value.

52.46.21 Data as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The node's data string.

52.46.22 GetCFXMLAttributeListDeclarationInfo as CFXMLAttributeListDeclarationInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: If the node has this type of additional data, the function will return it.
Notes: Returns nil on any error.

52.46.23 GetCFXMLDocumentInfo as CFXMLDocumentInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: If the node has this type of additional data, the function will return it.
Notes: Returns nil on any error.

52.46.24 GetCFXMLDocumentTypeInfo as CFXMLDocumentTypeInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: If the node has this type of additional data, the function will return it.
Notes: Returns nil on any error.

52.46.25 GetCFXMLElementInfo as CFXMLElementInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: If the node has this type of additional data, the function will return it.
Notes: Returns nil on any error.

52.46.26 GetCFXMLElementTypeDeclarationInfo as CFXMLElementTypeDeclarationInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: If the node has this type of additional data, the function will return it.
Notes: Returns nil on any error.

52.46.27 GetCFXMLEntityInfo as CFXMLEntityInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: If the node has this type of additional data, the function will return it.
Notes: Returns nil on any error.

52.46.28 GetCFXMLEntityReferenceInfo as CFXMLEntityReferenceInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: If the node has this type of additional data, the function will return it.
Notes: Returns nil on any error.

52.46.29 GetCFXMLNotationInfo as CFXMLNotationInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: If the node has this type of additional data, the function will return it.
Notes: Returns nil on any error.

52.46.30 GetCFXMLProcessingInstructionInfo as CFXMLProcessingInstruction-InfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: If the node has this type of additional data, the function will return it.
Notes: Returns nil on any error.

52.46.31 TypeCode as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The type code of the XML node.
Notes: See the class description for a value list.

52.47 class CFXMLNotationInfoMBS

52.47.1 class CFXMLNotationInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for additional information on a xml notation.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.47.2 Properties

52.47.3 ExternalID as CFXMLExternalIDMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The external ID for this notation.
Notes: (Read and Write property)

52.48 class CFXMLParserMBS

52.48.1 class CFXMLParserMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for a CoreFoundation XML Parser.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.
Notes: Subclass of the CFObjectMBS class.

52.48.2 Blog Entries

- MBS Xojo Plugins, version 20.5pr4

52.48.3 Blog Entries

- MBS Xojo Plugins, version 20.5pr4
- MBS REALbasic Plugins, version 10.4pr13

52.48.4 Methods

52.48.5 Abort(ErrorCode as Integer, ErrorDescription as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Stops parsing from inside an event.
Notes: Cause any in-progress parse to abort with the given error code and description. errorCode must be positive, and errorDescription may not be nil. Cannot be called asynchronously (i.e. must be called from within a parser events).

52.48.6 Create(data as CFBinaryDataMBS, url as CFURLMBS, options as Integer)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a new data based parser.
Notes:

Creates a parser which will parse the given data with the given options.
xmlData may not be nil.

dataSource should be the URL from which the data came, and may be nil; it is used to resolve any relative references found in xmlData.

These are the various options you can configure the parser with. These are chosen such that an option flag of 0 (kCFXMLParserNoOptions) leaves the XML as "intact" as possible (reports all structures; performs no replacements).
Hence, to make the parser do the most work, returning only the pure element tree, set the option flag to kCFXMLParserAllOptions:

kCFXMLParserValidateDocument	1	validate the document against its grammar from the DTD, reporting any errors. Currently not supported.
kCFXMLParserSkipMetaData	2	silently skip over metadata constructs (the DTD and comments)
kCFXMLParserReplacePhysicalEntities	4	replace declared entities like & lt;. Note that other than the 5 predefined entities (lt, gt, quot, amp, apos), these must be defined in the DTD. Currently not supported.
kCFXMLParserSkipWhitespace	8	skip over all whitespace that does not abut non-whitespace character data. In other words, given <foo><bar>blah </bar></foo>, the whitespace between foo's open tag and bar's open tag would be suppressed, but the whitespace around blah would be preserved.
kCFXMLParserResolveExternalEntities	16	
kCFXMLParserAddImpliedAttributes	32	where the DTD specifies implied attribute-value pairs for a particular element, add those pairs to any occurances of the element in the element tree. Currently not supported.
kCFXMLParserAllOptions	& hFFFFFF	
kCFXMLParserNoOptions	0	

52.48.7 CreateWithDataFromURL(url as CFURLMBS, options as Integer)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Creates a parser which will parse the given data with the given options.
Notes:

The data to be parsed is loaded directly from dataSource. dataSource may not be nil.

These are the various options you can configure the parser with. These are chosen such that an option flag of 0 (kCFXMLParserNoOptions) leaves the XML as "intact" as possible (reports all structures; performs no replacements).
Hence, to make the parser do the most work, returning only the pure element tree, set the option flag to kCFXMLParserAllOptions:

52.48.8 Document as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the top-most object returned by the CreateXMLStructure event.
Notes: Returns nil on any error.

kCFXMLParserValidateDocument	1	validate the document against its grammar from the DTD, reporting any errors. Currently not supported.
kCFXMLParserSkipMetaData	2	silently skip over metadata constructs (the DTD and comments)
kCFXMLParserReplacePhysicalEntities	4	replace declared entities like & lt;. Note that other than the 5 predefined entities (lt, gt, quot, amp, apos), these must be defined in the DTD. Currently not supported.
kCFXMLParserSkipWhitespace	8	skip over all whitespace that does not abut non-whitespace character data. In other words, given <foo><bar>blah </bar></foo>, the whitespace between foo's open tag and bar's open tag would be suppressed, but the whitespace around blah would be preserved.
kCFXMLParserResolveExternalEntities	16	
kCFXMLParserAddImpliedAttributes	32	where the DTD specifies implied attribute-value pairs for a particular element, add those pairs to any occurances of the element in the element tree. Currently not supported.
kCFXMLParserAllOptions	& hFFFFFF	
kCFXMLParserNoOptions	0	

52.48.9 ErrorDescription as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns an error description for the last error.
Notes: Returns nil on any error.

52.48.10 LineNumber as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the line number of the current parse location.

52.48.11 Location as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the character index of the current parse location.

52.48.12 Parse as boolean

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Starts the parser.
Notes:

Starts a parse of the data the parser was created with; returns success (true) or failure (false). Upon success, use the Document function to get the product of the parse. Upon failure, use ErrorCode or ErrorDescription to get information about the error. It is an error to call Parse while a parse is already underway.

Returns false on any error.

52.48.13 SourceURL as CFURLMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The currently used source url for this parser.
Notes: Returns nil on any error.

52.48.14 StatusCode as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The last status code.
Notes:

Get the status code (or a user-readable description via ErrorDescription) of the last error that occurred in a parse.
If no error has occurred, a nil description string is returned by ErrorDescription.

kCFXMLStatusParseNotBegun	-2
kCFXMLStatusParseInProgress	-1
kCFXMLStatusParseSuccessful	0
kCFXMLErrorUnexpectedEOF	1
kCFXMLErrorUnknownEncoding	2
kCFXMLErrorEncodingConversionFailure	3
kCFXMLErrorMalformedProcessingInstruction	4
kCFXMLErrorMalformedDTD	5
kCFXMLErrorMalformedName	6
kCFXMLErrorMalformedCDSect	7
kCFXMLErrorMalformedCloseTag	8
kCFXMLErrorMalformedStartTag	9
kCFXMLErrorMalformedDocument	10
kCFXMLErrorElementlessDocument	11
kCFXMLErrorMalformedComment	12
kCFXMLErrorMalformedCharacterReference	13
kCFXMLErrorMalformedParsedCharacterData	14
kCFXMLErrorNoData	15

52.48.15 Events

52.48.16 AddChild(parent as CFObjectMBS, child as CFObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: .

Function: Called as children are parsed and are ready to be added to the tree.
Notes: If CreateXMLStructure returns nil for a given structure, that structure is omitted entirely, and addChild will NOT be called for either a nil child or parent.

52.48.17 CreateXMLStructure(node as CFXMLNodeMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: .

Function: Called as new XML structures are encountered by the parser.
Notes:

May return nil to indicate that the given structure should be skipped; if nil is returned for a given structure, only minimal parsing is done for that structure (enough to correctly determine its end, and to extract any data necessary for the remainder of the parse, such as Entity definitions).
CreateXMLStructure (or indeed, any of the tree-creation callbacks) will not be called for any children of the skipped structure. The only exception is that the top-most element will always be reported even if nil was returned for the document as a whole.
NOTE: for performance reasons, the node passed to createXMLStructure cannot be safely retained by the client; the node as a whole must be copied (via CFXMLNode.Copy), or its contents must be extracted and copied.

Whatever value you return, you get it back in the parameters of the addChild and the endXMLStructure event.

52.48.18 EndXMLStructure(xmlType as CFObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: .

Function: Called once a structure (and all its children) are completely parsed.
Notes: As elements are encountered, CreateXMLStructure is called for them first, then AddChild to add the new structure to its parent, then AddChild (potentially several times) to add the new structure's children to it, then finally EndXMLStructure to show that the structure has been fully parsed.

52.48.19 HandleError(StatusCode as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: .

Function: Called as errors/warnings are encountered in the data stream.
Notes:

The handleError function may always return FALSE to force the parser to stop; if handleError returns TRUE, the parser will attempt to recover (fatal errors will still cause the parse to abort immediately). (Default for an emtpy event is true.)

52.48.20 ResolveExternalEntity(externalID as CFXMLExternalIDMBS) as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: .

Function: Called when external entities are referenced (NOT when they are simply defined). #
Notes: If the function returns nil, a place holder for the external entity is inserted into the tree.

52.49 class CFXMLProcessingInstructionInfoMBS

52.49.1 class CFXMLProcessingInstructionInfoMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class with additonal information for the processing instructions.
Deprecated: This item is deprecated and should no longer be used. You can use XML classes instead.

52.49.2 Properties

52.49.3 DataString as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The additional data.
Notes: (Read and Write property)

Chapter 53

CoreFoundation Network

53.1 class CFHostMBS

53.1.1 class CFHostMBS

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: A class for the CFHost API in CoreFoundation.
Notes:

You can asyncronly resolve hostnames to IPs and back.
IPv6 compatible.
Subclass of the CFObjectMBS class.

53.1.2 Xojo Developer Magazine

- 3.6, page 6: News

53.1.3 Xojo Developer Magazine

- 3.6, page 6: News

53.1.4 Methods

53.1.5 LookupAddress(address as string) as boolean

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Starts the asyncron lookup process for the given address.
Notes:

Address must be an IPv4 or IPv6 address.
Returns true on success or false on failure.

53.1.6 LookupName(hostname as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Starts an asyncron lookup process to find the IP addresses for the given domain name.
Notes: Returns true on success and false on failure.

53.1.7 Events

53.1.8 Error(ErrorDomain as Integer, ErrorCode as Integer)

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: .

Function: An error occurred.

53.1.9 GotAddress(address as string, addressIndex as Integer, count as Integer)

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: .

Function: An IP address was found.
Notes:

As plugins can't create arrays, the plugin will call this event count times with addressIndex going from 0 to count-1.
Name is the IP address, e.g. "12.34.56.78".

53.1.10 GotName(name as CFStringMBS, nameIndex as Integer, count as Integer)

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: .

Function: A name was found.
Notes:

As plugins can't create arrays, the plugin will call this event count times with nameIndex going from 0 to count-1.

Name is the domain name, e.g. "apple.com".

53.2 class CFHTTPMessageMBS

53.2.1 class CFHTTPMessageMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a HTTP message.
Notes: Subclass of the CFObjectMBS class.

53.2.2 Methods

53.2.3 AddAuthentication(authenticationFailureResponse as CFHTTPMessageMBS, username as CFStringMBS, password as CFStringMBS, authenticationScheme as CFStringMBS, forProxy as Boolean) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Adds authentication details.
Notes: Tries to modify request to contain the authentication information requested by authenticationFailureResponse (which presumably is a 401 or 407 response). Returns TRUE if successful; FALSE otherwise (leaving request unmodified). If authenticationScheme is NULL, the strongest supported scheme listed in failedResponse will be used.

53.2.4 AppendBytes(s as string) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Adds additional bytes to the message.
Notes:

The following function appends the given bytes to the message given (parsing out any control information if appropriate).
Returns FALSE if a parsing error occurs while processing the new data.

53.2.5 Copy as CFHTTPMessageMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a copy of the HTTP message.
Notes: Returns nil on any error.

53.2.6 HeaderFields as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: All header fields in one big CFDictionary.

53.2.7 IsHeaderComplete as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Whether further header data is expected by the message.

53.2.8 IsRequest as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Whether the message is a response or a request.

53.2.9 kCFHTTPAuthenticationSchemeBasic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A possible value you can pass when creating a HTTPMessage.

53.2.10 kCFHTTPAuthenticationSchemeDigest as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A possible value you can pass when creating a HTTPMessage.

53.2.11 kCFHTTPVersion1_0 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A possible value you can pass when creating a HTTPMessage.

53.2.12 kCFHTTPVersion1_1 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A possible value you can pass when creating a HTTPMessage.

53.2.13 RequestMethod as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The request method.

53.2.14 RequestURL as CFURLMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The request URL.

53.2.15 ResponseStatusCode as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The response status code.
Notes: See RFC 2616 for the codes.

53.2.16 ResponseStatusLine as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The response status line.

53.2.17 SerializedMessage as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: This message with all data stored in one CFBinaryData object to store in e.g. a file.

53.2.18 Version as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The HTTP version of the message.

53.2.19 Properties

53.2.20 Body as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The body of this message.
Notes: (Read and Write computed property)

53.2.21 HeaderField(headerfield as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Set or Get one of the header fields of the Message.
Notes: (Read and Write computed property)

53.3 Globals

53.3.1 CFStreamCreatePairWithSocketMBS(TheSocket as CFSocketMBS, readstream as CFReadStreamMBS, writestream as CFWriteStreamMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates two streams based on one socket.
Notes:

You need to pass in stream objects to get those objects filled.
If you forget one of this objects the stream will be readonly or writeonly.

53.3.2 CFStreamCreatePairWithSocketToHostMBS(host as CFStringMBS, port as Integer, readstream as CFReadStreamMBS, writestream as CFWriteStreamMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a pair of streams based on a socket which connects to the given host.

53.3.3 CFHTTPMessageCreateEmptyMBS(isRequest as boolean) as CFHTTPMessageMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new empty http message.
Notes:

Returns nil on any error.

Creates an empty request or response, which you can then append bytes to via CFHTTPMessage.AppendBytes(). The HTTP header information will be parsed out as the bytes are appended.

53.3.4 CFHTTPMessageCreateRequestMBS(requestMethod as CFStringMBS, url as CFURLMBS, httpVersion as CFStringMBS) as CFHTTPMessageMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new HTTP message as a request.

53.3.5 CFHTTPMessageCreateResponseMBS(statusCode as Integer, statusDescription as CFStringMBS, httpVersion as CFStringMBS) as CFHTTPMessageMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new HTTP message as a response.
Notes: Pass nil to use the standard description for the given status code, as found in RFC 2616.

53.3.6 kCFHostMBSGetTypeID as Integer

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFHostMBS object.

53.3.7 kCFHTTPMessageMBSGetTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFHTTPMessageMBS object.

53.3.8 kCFReadStreamMBSGetTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFReadStreamMBS object.

53.3.9 kCFSocketMBSGetTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFSocketMBS object.

53.3.10 kCFWriteStreamMBSGetTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the Type ID of a CFWriteStreamMBS object.

53.4 class CFProxyMBS

53.4.1 class CFProxyMBS

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The class for proxy queries.
Notes:

These APIs return arrays of dictionaries, where each dictionary describes a single proxy.
The arrays represent the order in which the proxies should be tried - try to download the URL using the first entry in the array, and if that fails, try using the second entry, and so on.

The keys to the proxy dictionaries follow the function declarations; every proxy dictionary will have an entry for kCFProxyTypeKey. If the type is anything except kCFProxyTypeAutoConfigurationURL, the dictionary will also have entries for the proxy's host and port (under kCFProxyHostNameKey and kCF-ProxyPortNumberKey respectively). If the type is kCFProxyTypeAutoConfigurationURL, it will have an entry for kCFProxyAutoConfigurationURLKey.

The keys for username and password are optional and will only be present if the username or password could be extracted from the information passed in (i.e. either the URL itself or the proxy dictionary supplied). These APIs do not consult any external credential stores (such as the Keychain).

All the class methods require Mac OS X 10.5 or newer.

53.4.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.1
- MBS Xojo / Real Studio Plugins, version 14.1pr1

53.4.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.1
- MBS Xojo / Real Studio Plugins, version 14.1pr1

53.4.4 Methods

53.4.5 ExecuteProxyAutoConfigurationScript(proxyAutoConfigurationScript as string, targetURL as string) as boolean

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Begins the process of executing proxyAutoConfigurationScript to determine the correct proxy to use to retrieve targetURL.
Notes:

When the results are found, the event will be called on the main thread, passing a valid proxyList and nil error upon success, or a nil proxyList and valid error on failure.

proxyAutoConfigurationScript: A string containing the code of the script to be executed.
targetURL: The URL that should be passed to the autoconfiguration script.

Returns true if the request was started.

53.4.6 ExecuteProxyAutoConfigurationURL(proxyAutoConfigURL as string, targetURL as string) as boolean

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Executes the proxy auto configuration URL and returns which proxy to use.
Notes: As ExecuteProxyAutoConfigurationScript(), except that ExecuteProxyAutoConfigurationURL will additionally download the contents of proxyAutoConfigURL, convert it to a JavaScript string, and then execute that script.

53.4.7 kCFNetworkProxiesExceptionsList as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the list of host name patterns that should bypass the proxy.
Notes: Value is an array of strings.

53.4.8 kCFNetworkProxiesExcludeSimpleHostnames as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key whose value indicates if simple hostnames will be excluded
Notes:

Value is a number.
Simple hostnames will be excluded if the key is present and has a non-zero value.

53.4.9 kCFNetworkProxiesFTPEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status of the ftp proxy.
Notes:

Value is a number.
The proxy is enabled if the key is present and has a non-zero value.

53.4.10 kCFNetworkProxiesFTPPassive as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the state of passive mode for the ftp proxy.
Notes:

Value is a Number.
A value of one indicates that passive mode is enabled, a value of zero indicates that passive mode is not enabled.

53.4.11 kCFNetworkProxiesFTPPort as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the port number associated with the ftp proxy.
Notes: Value is a number which is the port number.

53.4.12 kCFNetworkProxiesFTPProxy as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the host name associated with the ftp proxy.
Notes: Value is a string which is the proxy host name.

53.4.13 kCFNetworkProxiesHTTPPort as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the port number associated with the HTTP proxy.
Notes: Value is a number which is the port number.

53.4.14 kCFNetworkProxiesHTTPProxy as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the host name associated with the HTTP proxy.
Notes: Value is a string which is the proxy host name.

53.4.15 kCFNetworkProxiesHTTPSEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status of the HTTPS proxy; value is a number.
Notes: The proxy is enabled if the key is present and has a non-zero value.

53.4.16 kCFNetworkProxiesHTTPSPort as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the port number associated with the HTTPS proxy.
Notes: Value is a Number which is the port number.

53.4.17 kCFNetworkProxiesHTTPSProxy as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the host name associated with the HTTPS proxy.
Notes: Value is a string which is the proxy host name.

53.4.18 kCFNetworkProxiesProxyAutoConfigEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status ProxyAutoConfig (PAC).
Notes:

Value is a number.
ProxyAutoConfig is enabled if the key is present and has a non-zero value.

53.4.19 kCFNetworkProxiesProxyAutoConfigURLString as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the url which indicates the location of the ProxyAutoConfig (PAC) file.
Notes: Value is a string which is url for the PAC file.

53.4.20 kCFNetworkProxiesProxyAutoDiscoveryEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status of proxy auto discovery.
Notes:

Value is a number.
Proxy auto discovery is enabled if the key is present and has a non-zero value.

53.4.21 kCFNetworkProxiesRTSPEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status of the RTSP proxy.
Notes:

Value is a Number.
The proxy is enabled if the key is present and has a non-zero value.

53.4.22 kCFNetworkProxiesRTSPPort as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the port number associated with the RTSP proxy.
Notes: Value is a Number which is the port number.

53.4.23 kCFNetworkProxiesRTSPProxy as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the host name associated with the RTSP proxy.
Notes: Value is a string which is the proxy host name.

53.4.24 kCFNetworkProxiesSOCKSEnable as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the enabled status of the SOCKS proxy.
Notes:

Value is a number.
The proxy is enabled if the key is present and has a non-zero value.

53.4.25 kCFNetworkProxiesSOCKSPort as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the port number associated with the SOCKS proxy.
Notes: Value is a Number which is the port number.

53.4.26 kCFNetworkProxiesSOCKSProxy as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the host name associated with the SOCKS proxy.
Notes: value is a String which is the proxy host name.

53.4.27 kCFProxyAutoConfigurationJavaScriptKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the proxy's PAC script.
Notes: The value is a String that contains the full JavaScript soure text for the PAC file.

53.4.28 kCFProxyAutoConfigurationURLKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the proxy's PAC file location.
Notes: This key is only present if the proxy's type is kCFProxyTypeAutoConfigurationURL. Value is a string with URL specifying the location of a proxy auto-configuration file.

53.4.29 kCFProxyHostNameKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the proxy's hostname; value is a string.
Notes: Note that this may be an IPv4 or IPv6 dotted-IP string.

53.4.30 kCFProxyPasswordKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the password to be used with the proxy.
Notes: Value is a String. Note that this key will only be present if the username could be extracted from the information passed in. No external credential stores (like the Keychain) are consulted.

53.4.31 kCFProxyPortNumberKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the proxy's port number.
Notes: Value is a CFNumber specifying the port on which to contact the proxy.

53.4.32 kCFProxyTypeAutoConfigurationJavaScript as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is specified by a proxy autoconfiguration (PAC) file content.

53.4.33 kCFProxyTypeAutoConfigurationURL as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is specified by a proxy autoconfiguration (PAC) file.

53.4.34 kCFProxyTypeFTP as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is an FTP proxy.

53.4.35 kCFProxyTypeHTTP as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is an HTTP proxy.

53.4.36 kCFProxyTypeHTTPS as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is a tunneling proxy as used for HTTPS.

53.4.37 kCFProxyTypeKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the type of proxy being represented.
Notes: value will be one of the kCFProxyType* constants listed below.

53.4.38 kCFProxyTypeNone as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: No proxy should be used; contact the origin server directly.

53.4.39 kCFProxyTypeSOCKS as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the proxy types.
Notes: The proxy is a SOCKS proxy.

53.4.40 kCFProxyUsernameKey as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Key for the username to be used with the proxy.
Notes: Value is a String. Note that this key will only be present if the username could be extracted from the information passed in. No external credential stores (like the Keychain) are consulted.

53.4.41 ProxiesForAutoConfigurationScript(proxyAutoConfigurationScript as string, URL as string, byref error as CFErrorMBS) as Dictionary()

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function:

Synchronously executes the given proxy autoconfiguration script and returns a valid proxyList and nil error upon success or a
nil proxyList and valid error on failure.
Notes:

proxyAutoConfigurationScript: A string containing the code of the script to be executed.
targetURL: The URL that should be input in to the autoconfiguration script.
error: A return argument that will contain a valid error in case of failure.

Returns an array of dictionaries describing the proxies returned by the script or nil on failure.

53.4.42 ProxiesForURL(URL as string, proxySettings as Dictionary = nil) as Dictionary()

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Given a URL and a proxy dictionary, determines the ordered list of proxies that should be used to download the given URL.
Notes:

url: The URL to be accessed
proxySettings: A dictionary describing the available proxy settings; the dictionary's format should match the dictionary returned by SystemProxySettings described below. If you pass nil, the plugin queries SystemProxySettings functions for you.

Returns an array of dictionaries; each dictionary describes a single proxy. See the comment at the top of this file for how to interpret the returned dictionaries.

53.4.43 SystemProxySettings as Dictionary

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Returns a Dictionary containing the current system internet proxy settings.
Example:

```
dim d as Dictionary = CFProxyMBS.SystemProxySettings

dim k as string = CFProxyMBS.kCFProxyTypeKey
MsgBox "Type: "+d.lookup(k, "unknown")
```

Notes:

Returns a dictionary containing key-value pairs that represent the current internet proxy settings.
Value is nil if no proxy settings have been defined or if an error was encountered.

53.4.44 Events

53.4.45 AutoConfigurationResult(error as CFErrorMBS, proxyList() as Dictionary)

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Event to be called when a PAC file computation has completed.
Notes:

Initiated by either ExecuteProxyAutoConfigurationScript or ExecuteProxyAutoConfigurationURL.

proxyList: Upon success, the list of proxies returned by the autoconfiguration script. The list has the same format as returned by ProxiesForURL, above, except that no entry may be of type kCFProxyTypeAutoConfigurationURL.
error: Upon failure, an error object explaining the failure.

53.5 class CFReadStreamMBS

53.5.1 class CFReadStreamMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a CoreFoundation write stream.
Notes:

You can read from a file, a memoryblock or using a socket over the network.
Subclass of the CFStreamMBS class.

53.5.2 Methods

53.5.3 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Closes the stream.
Notes: Terminates the flow of bytes; releases any system resources required by the stream. The stream may not fail to close.

53.5.4 CreateForHTTPRequest(request as CFHTTPMessageMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new read stream based on the given HTTP request.
Notes:

Creates a read stream for the response to the given request; when the stream is opened, it will begin transmitting the request. The bytes returned are the pure body bytes; the response header has been parsed off. To retrieve the response header, ask for kCFStreamPropertyHTTPResponseHeader any time after the first bytes arrive on the stream (or when stream end is reported, if there are no data bytes).

Returns true if successfull.

53.5.5 CreateWithFile(fileurl as CFURLMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new file based readstream.
Notes: Returns true if successfull.

53.5.6 CreateWithMemoryBlock(mem as memoryblock, len as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new readstream based on the data of the given memoryblock.
Notes: Returns true if successfull.

53.5.7 CreateWithString(s as string) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new readstream based on the data of the given string.
Notes: Returns true if successfull.

53.5.8 ErrorCode as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The last error code.
Notes: Meaning depends on the ErrorDomain.

53.5.9 ErrorDomain as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The error domain of the last error code.
Notes:

Possible domains:

kCFStreamErrorDomainCustom	= -1	custom to the kind of stream in question
kCFStreamErrorDomainPOSIX	= 1	POSIX errno; interpret using <sys/errno.h>
kCFStreamErrorDomainMacOSStatus	= 2	OSStatus type from Carbon APIs; interpret using <MacTypes.h>

53.5.10 GetProperty(propertyName as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns a property of the stream.
Notes:

Returns nil on any error.
Particular streams can name properties and assign meanings to them; you access these properties through the GetProperty and SetProperty calls. A property is any interesting information about the stream other than the data being transmitted itself. Examples include the headers from an HTTP transmission, or the expected number of bytes, or permission information, etc. Properties that can be set configure the behavior of the stream, and may only be settable at particular times (like before the stream has been opened). See the documentation for particular properties to determine their get- and set-ability.

53.5.11 HasBytesAvailable as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: True if you can read bytes.
Notes:

Whether there is data currently available for reading;
Returns TRUE if it's impossible to tell without trying.

53.5.12 InstallEvents

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Installs the event handler.
Notes:

You need to remove the event handler later to not leak memory!
The event handler is needed to have the Callback event fireing.

53.5.13 Open as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Opens the stream.
Notes: Returns success/failure. Opening a stream causes it to reserve all the system resources it requires. If the stream can open non-blocking, this will always return TRUE; listen to the Callback to find out when the open completes and whether it was successful, or poll using the Status property, waiting for a status of kCFStreamStatusOpen or kCFStreamStatusError.

53.5.14 ReadMemory(maxBytesToRead as Integer, mem as memoryblock) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Reads some bytes from the stream.
Notes:

Returns the number of bytes read, or -1 if an error occurs preventing any bytes from being read, or 0 if the stream's end was encountered.
It is an error to try and read from a stream that hasn't been opened first.
This call will block until at least one byte is available; it will NOT block until the entire buffer can be filled.
To avoid blocking, either poll using HasBytesAvailable or use the run loop and listen for the kCFStreamCanRead event for notification of data available.

53.5.15 ReadString(maxBytesToRead as Integer) as string

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Reads some bytes from the stream.
Notes:

Returns a string as long as the number of bytes read, or "" if an error occurs preventing any bytes from being read or the stream's end was encountered.
It is an error to try and read from a stream that hasn't been opened first.
This call will block until at least one byte is available; it will NOT block until the entire buffer can be filled.
To avoid blocking, either poll using HasBytesAvailable or use the run loop and listen for the kCFStreamCanRead event for notification of data available.

53.5.16 RemoveEvents

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Removes the event handler.
Notes: You should remove this event handler after you finished with the stream.

53.5.17 SetProperty(propertyName as CFStringMBS, propertyValue as CFObjectMBS) as Boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Sets a property of the stream.
Notes: Returns true if successfull.

53.5.18 Status as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The status of the stream.
Notes:

Possible values:

kCFStreamStatusNotOpen	= 0
kCFStreamStatusOpening	= 1 (open is in-progress)
kCFStreamStatusOpen	= 2
kCFStreamStatusReading	= 3
kCFStreamStatusWriting	= 4
kCFStreamStatusAtEnd	= 5 (no further bytes can be read/written)
kCFStreamStatusClosed	= 6
kCFStreamStatusError	= 7

53.5.19 Events

53.5.20 Callback(reason as Integer)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: .

Function: Called when something happens.
Notes:

Possible values for the reason:

kCFStreamEventNone	= 0
kCFStreamEventOpenCompleted	= 1
kCFStreamEventHasBytesAvailable	= 2
kCFStreamEventCanAcceptBytes	= 4
kCFStreamEventErrorOccurred	= 8
kCFStreamEventEndEncountered	= 16

53.6 class CFSocketMBS

53.6.1 class CFSocketMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a CFSocket.
Notes:

A CFSocket contains a native socket within a structure that can be used to read from the socket in the background and make the data thus read available using a runloop source.

Addresses are stored as CFDatas containing a struct sockaddr
appropriate for the protocol family; make sure that all fields are
filled in properly when passing in an address.

Some error codes:

```
kCFSocketSuccess     = 0
 kCFSocketError      = -1
 kCFSocketTimeout    = -2
```

Subclass of the CFObjectMBS class.

53.6.2 Methods

53.6.3 ConnectToAddress(address as CFBinaryDataMBS, timeout as Double) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Connects the socket to the given address.
Notes:

Returns a socket error.

Some error codes:

53.6.4 Create as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

kCFSocketSuccess = 0
kCFSocketError = -1
kCFSocketTimeout = -2

Function: Creates a new socket.
Notes:

Some error codes:

kCFSocketSuccess = 0,
kCFSocketError = -1,
kCFSocketTimeout = -2

53.6.5 Invalidate

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Invalidates the socket.

53.6.6 IsValid as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Checks if the socket is valid.

53.6.7 NativeSocketHandle as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The native socket handle.

53.6.8 PeerAddress as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The peer address of this socket.
Notes: Returns nil on any error.

53.6.9 SendData(data as CFBinaryDataMBS, timeout as Double) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Sends data over the socket with a given timeout.
Notes:

For convenience, a function is provided to send data using the socket with a timeout. The timeout will be used only if the specified value is positive.

Some error codes:

kCFSocketSuccess	= 0
kCFSocketError	= -1
kCFSocketTimeout	= -2

53.6.10 Properties

53.6.11 Address as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The address of this socket.
Notes: (Read and Write computed property)

53.6.12 Events

53.6.13 Callback(reason as Integer, address as CFBinaryDataMBS, data as memoryblock)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: .

Function: The callback event for this socket.
Notes:

Possible reasons:

kCFSocketNoCallBack	= 0
kCFSocketReadCallBack	= 1
kCFSocketAcceptCallBack	= 2
kCFSocketDataCallBack	= 3
kCFSocketConnectCallBack	= 4
kCFSocketWriteCallBack	= 8

53.7 class CFStreamMBS

53.7.1 class CFStreamMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a CFStream.
Notes:

(Only a place to store all those constants ;-)
Subclass of the CFObjectMBS class.

53.7.2 Methods

53.7.3 kCFHTTPAuthenticationSchemeBasic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the authentication schemes available.

53.7.4 kCFHTTPAuthenticationSchemeDigest as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the authentication schemes available.

53.7.5 kCFHTTPVersion1_0 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: HTTP Version 1.0.

53.7.6 kCFHTTPVersion1_1 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: HTTP Version 1.1.

53.7.7 kCFStreamErrorDomainHTTP as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: An error domain used with the socket based streams.
Notes:

Possible error values:

```
kCFStreamErrorHTTPParseFailure        = -1
 kCFStreamErrorHTTPRedirectionLoop    = -2
 kCFStreamErrorHTTPBadURL             = -3
```

53.7.8 kCFStreamErrorDomainSOCKS as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: SOCKS proxy error domain.

53.7.9 kCFStreamErrorDomainSSL as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: An error domain used with the socket based streams.
Notes: Secure stream support.

53.7.10 kCFStreamPropertyAppendToFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Whether to append new bytes to an existing file.
Notes:

Property for file write streams; value should be a CFBoolean.
Set to TRUE to append to a file, rather than to replace its contents.
Requires Mac OS X 10.2

53.7.11 kCFStreamPropertyDataWritten as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A property name for use with the CFWriteStream class.
Example:

```
dim writestream as CFWriteStreamMBS
dim c as cfobjectmbs
c=writestream.getproperty(writestream.kCFStreamPropertyDataWritten)
```

Notes: Value will be a CFData containing all bytes thusfar written; used to recover the data written to a memory write stream.

53.7.12 kCFStreamPropertyHTTPAttemptPersistentConnection as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value should be a CFBoolean. If this property is set to true, an HTTP stream will look for an appropriate extant persistent connection to use, and if it finds none, will try to create one.

53.7.13 kCFStreamPropertyHTTPFinalURL as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value is the CFURL from the final request; will only differ from the URL in the original request if an autoredirection has occurred.

53.7.14 kCFStreamPropertyHTTPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Which HTTP Proxy to use.
Notes:

HTTP proxy information is set the same way as SOCKS proxies.
Call CFReadStream.SetProperty() passing an HTTP stream and the property kCFStreamPropertyHTTP-Proxy.
The value should be a CFDictionary that includes at least one Host/Port pair from the keys below.
The dictionary returned by SystemConfiguration.framework can also be passed directly as the value

Keys for the dictionary to use:
kCFStreamPropertyHTTPProxyHost
kCFStreamPropertyHTTPProxyPort

kCFStreamPropertyHTTPSProxyHost
kCFStreamPropertyHTTPSProxyPort

53.7.15 kCFStreamPropertyHTTPProxyHost as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the keys for the proxy CFDictionary for a socket based stream.

53.7.16 kCFStreamPropertyHTTPProxyPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the keys for the proxy CFDictionary for a socket based stream.

53.7.17 kCFStreamPropertyHTTPResponseHeader as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value is a CFHTTPMessage with 0 bytes data.

53.7.18 kCFStreamPropertyHTTPShouldAutoredirect as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value should be a CFBoolean.

53.7.19 kCFStreamPropertyHTTPSProxyHost as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the keys for the proxy CFDictionary for a socket based stream.

53.7.20 kCFStreamPropertyHTTPSProxyPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the keys for the proxy CFDictionary for a socket based stream.

53.7.21 kCFStreamPropertyShouldCloseNativeSocket as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes:

Set the value to kCFBooleanTrue if the stream should close and release the underlying native socket when the stream is released. Set the value to kCFBooleanFalse to keep the native socket from closing and releasing when the stream is released.

If the stream was created with a native socket, the default property setting on the stream is kCFBooleanFalse.

The kCFStreamPropertyShouldCloseNativeSocket can be set through CFReadStream.SetProperty or CFWriteStream.SetProperty. The property can be copied through CFReadStream.GetProperty or CFWriteStream.GetProperty.

53.7.22 kCFStreamPropertySocketNativeHandle as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value will be a CFData containing the native handle.

53.7.23 kCFStreamPropertySocketRemoteHostName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value will be a CFString, or nil if unknown.

53.7.24 kCFStreamPropertySocketRemotePortNumber as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes: Value will be a CFNumber, or nil if unknown.

53.7.25 kCFStreamPropertySocketSecurityLevel as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes:

You set this property to one of the following values:
kCFStreamSocketSecurityLevelSSLv3
kCFStreamSocketSecurityLevelSSLv2
kCFStreamSocketSecurityLevelNone
kCFStreamSocketSecurityLevelNegotiatedSSL
kCFStreamSocketSecurityLevelTLSv1
(this 5 properties return CFStrings which you pass to SetProperty)

53.7.26 kCFStreamPropertySOCKSPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.

53.7.27 kCFStreamPropertySOCKSProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.
Notes:

SOCKS Proxy usage
To set a stream to use a SOCKS proxy, call CFReadStream.SetProperty or CFWriteStream.SetProperty with the property name set to kCFStreamPropertySOCKSProxy and the value being a CFDictionary with at least the following two keys: kCFStreamPropertySOCKSProxyHost and kCFStreamPropertySOCKSProxyPort.
The dictionary returned by SystemConfiguration for SOCKS proxies will work without alteration.
The key kCFStreamPropertySOCKSProxyHost should contain a CFStringRef value representing the SOCKS proxy host. The key kCFStreamPropertySOCKSProxyPort should contain a CFNumberRef which itself is of type kCFNumberSInt32Type. This value should represent the port on which the proxy is listening.

By default, SOCKS5 will be used unless there is a kCFStreamPropertySOCKSVersion key in the CFDictionary. Its value must be kCFStreamSocketSOCKSVersion4 or kCFStreamSocketSOCKSVersion5 to set SOCKS4 or SOCKS5, respectively.

To set a user name and/or password, if required, the dictionary must contain the key(s) kCFStreamPropertySOCKSUser and/or kCFStreamPropertySOCKSPassword with the value being the user's name as a CFString and/or the user's password as a CFString, respectively.

kCFStreamPropertySOCKSProxy can be set through CFReadStream.SetProperty or CFWriteStream.SetProperty. The property can be copied through CFReadStream.GetProperty or CFWriteStream.GetProperty.

53.7.28 kCFStreamPropertySOCKSProxyHost as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.

53.7.29 kCFStreamPropertySOCKSProxyPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.

53.7.30 kCFStreamPropertySOCKSUser as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.

53.7.31 kCFStreamPropertySOCKSVersion as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property keys for a socket based stream.

53.7.32 kCFStreamSocketSecurityLevelNegotiatedSSL as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property values for a socket based stream.
Notes: TLS or SSL with fallback to lower versions; this is what HTTPS does, for instance.

53.7.33 kCFStreamSocketSecurityLevelNone as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property values for a socket based stream.

53.7.34 kCFStreamSocketSecurityLevelSSLv2 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property values for a socket based stream.

53.7.35 kCFStreamSocketSecurityLevelSSLv3 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property values for a socket based stream.

53.7.36 kCFStreamSocketSecurityLevelTLSv1 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the property values for a socket based stream.

53.7.37 kCFStreamSocketSOCKSVersion4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the values used with the kCFStreamPropertySOCKSVersion property for a socket based stream.

53.7.38 kCFStreamSocketSOCKSVersion5 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the values used with the kCFStreamPropertySOCKSVersion property for a socket based stream.

53.8 class CFWriteStreamMBS

53.8.1 class CFWriteStreamMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a CoreFoundation write stream.
Notes:

You can write to a file, a memoryblock or using a socket over the network.
Subclass of the CFStreamMBS class.

53.8.2 Methods

53.8.3 CanAcceptBytes as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Whether the stream can now accept data to write.
Notes:

Whether the stream can currently be written to without blocking;
Returns TRUE if it's impossible to tell without trying.

53.8.4 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Closes the stream.
Notes: Terminates the flow of bytes; releases any system resources required by the stream. The stream may not fail to close.

53.8.5 CreateWithFile(fileurl as CFURLMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new WriteStream using the given file specification.
Notes: Returns true if successfull.

53.8.6 CreateWithMemory as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new memory based stream.
Notes: New buffers are allocated as bytes are written to the stream. At any point, you can recover the bytes thusfar written by asking for the property kCFStreamPropertyDataWritten (using GetProperty).

53.8.7 CreateWithMemoryBlock(mem as memoryblock, len as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new WriteStream which writes the data into the given memoryblock.
Notes:

The stream writes into the memoryblock given; when bufferCapacity is exhausted, the stream is exhausted (status becomes kCFStreamStatusAtEnd).
Returns nil on any error.

53.8.8 ErrorCode as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The last error code.
Notes: Meaning depends on the ErrorDomain.

53.8.9 ErrorDomain as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The error domain of the last error code.
Notes:

Possible domains:

kCFStreamErrorDomainCustom	= -1	custom to the kind of stream in question
kCFStreamErrorDomainPOSIX	= 1	POSIX errno; interpret using <sys/errno.h>
kCFStreamErrorDomainMacOSStatus	= 2	OSStatus type from Carbon APIs; interpret using <MacTypes.h>

53.8.10 GetProperty(propertyName as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns a property of the stream.
Notes:

Returns nil on any error.
Particular streams can name properties and assign meanings to them; you access these properties through the GetProperty and SetProperty calls. A property is any interesting information about the stream other than the data being transmitted itself. Examples include the headers from an HTTP transmission, or the expected number of bytes, or permission information, etc. Properties that can be set configure the behavior of the stream, and may only be settable at particular times (like before the stream has been opened). See the documentation for particular properties to determine their get- and set-ability.

53.8.11 InstallEvents

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Installs the event handler.
Notes:

You need to remove the event handler later to not leak memory!
The event handler is needed to have the Callback event fireing.

53.8.12 Open as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Opens the stream.
Notes: Returns success/failure. Opening a stream causes it to reserve all the system resources it requires. If the stream can open non-blocking, this will always return TRUE; listen to the Callback to find out when the open completes and whether it was successful, or poll using the Status property, waiting for a status of kCFStreamStatusOpen or kCFStreamStatusError.

53.8.13 RemoveEvents

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Removes the event handler.
Notes: You should remove this event handler after you finished with the stream.

53.8.14 SetProperty(propertyName as CFStringMBS, propertyValue as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Sets a property of the stream.
Notes: Returns true if successfull.

53.8.15 Status as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The status of the stream.
Notes:

Possible values:

kCFStreamStatusNotOpen	= 0
kCFStreamStatusOpening	= 1 (open is in-progress)
kCFStreamStatusOpen	= 2
kCFStreamStatusReading	= 3
kCFStreamStatusWriting	= 4
kCFStreamStatusAtEnd	= 5 (no further bytes can be read/written)
kCFStreamStatusClosed	= 6
kCFStreamStatusError	= 7

53.8.16 WriteMemory(mem as memoryblock, len as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Write the data from inside the memoryblock to the stream.
Notes: Returns the number of bytes successfully written, -1 if an error has occurred, or 0 if the stream has been filled to capacity (for fixed-length streams). If the stream is not full, this call will block until at least one byte is written. To avoid blocking, either poll via CanAcceptBytes or use the run loop and listen for the kCFStreamCanWrite event.

53.8.17 WriteString(buf as string) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Write the data from inside the string to the stream.
Notes: Returns the number of bytes successfully written, -1 if an error has occurred, or 0 if the stream has been filled to capacity (for fixed-length streams). If the stream is not full, this call will block until at least one byte is written. To avoid blocking, either poll via CanAcceptBytes or use the run loop and listen for the kCFStreamCanWrite event.

53.8.18 Events

53.8.19 Callback(reason as Integer)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: .

Function: Called when something happens.
Notes:

Possible values for the reason:

kCFStreamEventNone	= 0
kCFStreamEventOpenCompleted	= 1
kCFStreamEventHasBytesAvailable	= 2
kCFStreamEventCanAcceptBytes	= 4
kCFStreamEventErrorOccurred	= 8
kCFStreamEventEndEncountered	= 16

Chapter 54

CoreGraphics

54.1 Globals

54.1.1 CGNewPDFDocumentMBS(file as folderitem, MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Notes:

Title, Author, Creator, Subject and Keywords parameters can be empty.

If OwnerPassword and UserPassword are filled in the PDF is encrypted and AllowsPrinting/AllowsCopy define what the user can do after he entered his password.

The passwords must be a string which can be represented in ASCII encoding; only the first 32 bytes will be used for the password.

Requires Mac OS X to work.
See also:

- 54.1.2 CGNewPDFDocumentMBS(file as folderitem, MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean, KeyLength as Integer) as CGPDFContextMBS 10196

54.1.2 CGNewPDFDocumentMBS(file as folderitem, MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean, KeyLength as Integer) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Notes:

Title, Author, Creator, Subject and Keywords parameters can be empty.

If OwnerPassword and UserPassword are filled in the PDF is encrypted and AllowsPrinting/AllowsCopy define what the user can do after he entered his password. #

The passwords must be a string which can be represented in ASCII encoding; only the first 32 bytes will be used for the password.

Keylength must be a value between 48 bit and 128 bit in 8 bit steps. 0 uses default value.

Requires Mac OS X to work.

54.1.3 Xojo Developer Magazine

- 6.4, page 30: Creating PDF Files, How to create PDFs using the MBS Plugins by Christian Schmitz

See also:

- 54.1.1 CGNewPDFDocumentMBS(file as folderitem, MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean) as CGPDFContextMBS 10195

54.1.4 GetCurrentCGContextMBS as CGContextMBS

MBS MacCG Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new CGContextMBS object for the current Cocoa graphics context.
Notes:

Requires Mac OS X to work.
Returns nil on any error.

54.1.5 CGBitmapContextCreateMBS(data as memoryblock, width as Integer, height as Integer, bitsPerComponent as Integer, bytesPerRow as Integer, colorspace as CGColorSpaceMBS, alphaInfo as Integer) as CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Create a bitmap context.
Notes:

The context draws into a bitmap which is 'width' pixels wide and 'height' pixels high. The number of components for each pixel is specified by 'colorspace', which also may specify a destination color profile. The number of bits for each component of a pixel is specified by 'bitsPerComponent', which must be 1, 2, 4, or 8. Each row of the bitmap consists of 'bytesPerRow' bytes, which must be at least '(width * bitsPerComponent * number of components + 7)/8' bytes. 'data' points a block of memory at least 'bytesPerRow * height' bytes. 'alphaInfo' specifies whether the bitmap should contain an alpha channel, and how it's to be generated.

Fails if data=nil or colorspace=nil.
The memoryblock is not referenced and not stored, so keep it alive while using the BitmapContext object.

Returns nil on any error.

data
A pointer to the destination in memory where the drawing is to be rendered. The size of this memoryblock should be at least(bytesPerRow*height) bytes.

width
The width of the bitmap in pixels.

height
The height of the bitmap in pixels.

bitsPerComponent
The number of bits to use for each component of a pixel in memory. Allowable values are 4, 5, or 8. For example, for a 32-bit RGB(A) colorspace, you would specify a value of 8 bits per color component. In combination, the number of bits per component, the color space, and the alpha value determine which bitmap context formats Quartz supports.

bytesPerRow
The number of bytes of memory to use per row of the bitmap. This value must be at least the product of the width and bitsPerComponentparameters, times the number of components per pixel. The result should be divided by 8 and rounded up to the nearest whole number to obtain the number of bytes to use per row. That is, the value must be at least (((width)*(bits per component)*(number of components per pixel))+7)/8 bytes. For a given row, Quartz stores bitmap data for the first width pixels and ignores any remaining bytes.

The colorspace value referenced by the colorspace parameter specifies the number of components for each pixel.

colorspace
The color space to use for the bitmap context.

alphaInfo
A CGImageAlphaInfo constant specifying whether the bitmap should contain an alpha channel and how it is to be generated. The alpha value determines the opacity of a pixel when it is drawn.

Supported pixel formats:

Pixel format	Color space	Bits per pixel	Bits per component	Alpha option
Gray_8	Grayscale	8	8	kCGImageAlphaNone
RGB555	RGB	16	5	kCGImageAlphaNoneSkipFirst
XRGB_32	RGB	32	8	kCGImageAlphaNoneSkipFirst
ARGB_32	RGB	32	8	kCGImageAlphaPremultipliedFirst
RGBX_32	RGB	32	8	kCGImageAlphaNoneSkipLast
RGBA_32	RGB	32	8	kCGImageAlphaPremultipliedLast

Quartz does not support the following formats in a bitmap context:

- 1-bit grayscale
- 24-bit RGB
- CMYK (any depth)

CGImageAlphaInfo constants:

kCGImageAlphaNone	0	
kCGImageAlphaPremultipliedLast	1	For example, premultiplied RGBA
kCGImageAlphaPremultipliedFirst	2	For example, premultiplied ARGB
kCGImageAlphaLast	3	For example, non-premultiplied RGBA
kCGImageAlphaFirst	4	For example, non-premultiplied ARGB
kCGImageAlphaNoneSkipLast	5	Equivalent to kCGImageAlphaNone.
kCGImageAlphaNoneSkipFirst	6	

54.1.6 CGOpenPDFDocumentMBS(dataprovider as CGDataProviderMBS) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 5.1, Platform: macOS, Targets: All.

Function: Opens a CG PDF Document from a data stream.
Example:

```
Sub Paint(g As Graphics)
// window.paint event
dim f as FolderItem
dim b as BinaryStream
dim s as string
dim d as CGDataProviderMBS
dim p as CGPDFDocumentMBS

// get a folderitem to a pdf file.
f=SpecialFolder.Desktop.Child("notes.pdf")

// load the content in a string variable
b=f.OpenAsBinaryFile(false)
s=b.Read(b.Length)
b.Close

// now make a CGDataProvider based on a string.
d=CGDataProviderMBS.CreateWithData(s)

// Open the PDF from the Data Provider
p=CGOpenPDFDocumentMBS(d)

// And play with it
g.DrawCGPDFDocumentMBS p,p.MediaBox(1),1

Exception
// trouble goes here.
End Sub
```

Notes: Returns nil on any error.

54.1.7 CGShadingCreateAxialMBS(colorspace as CGColorSpaceMBS, startPoint as CGPointMBS, endPoint as CGPointMBS, func as CGFunctionMBS, extendStart as boolean, extendEnd as boolean) as CGShadingMBS

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Creates a Quartz axial shading.
Notes:

Parameters:

colorspace: The color space in which color values are expressed. Quartz retains this object; upon return, you may safely release it.
startPoint: The starting point of the axis, in the shading's target coordinate space.
endPoint: The ending point of the axis, in the shading's target coordinate space.
function: A CGFunction object. This object refers to your function for creating an axial shading. Quartz retains this object; upon return, you may safely release it.
extendStart: A Boolean value that specifies whether to extend the shading beyond the starting point of the axis.
extendEnd: A Boolean value that specifies whether to extend the shading beyond the ending point of the axis.

Returns a new Quartz axial shading or nil on any error.

Discussion
An axial shading is a color blend that varies along a linear axis between two endpoints and extends indefinitely perpendicular to that axis. When you are ready to draw the shading, call the function CGContextMBS.DrawShading.

Available in Mac OS X version 10.2 and later.

54.1.8 CGShadingCreateRadialMBS(colorspace as CGColorSpaceMBS, startPoint as CGPointMBS, startRadius as Double, endPoint as CGPointMBS, endRadius as Double, func as CGFunctionMBS, extendStart as boolean, extendEnd as boolean) as CGShadingMBS

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Creates a Quartz radial shading.
Notes:

Parameters
colorspace: The color space in which color values are expressed.
startPoint: The center of the starting circle, in the shading's target coordinate space.
startRadius: The radius of the starting circle, in the shading's target coordinate space.
endPoint: The center of the ending circle, in the shading's target coordinate space.
endRadius: The radius of the ending circle, in the shading's target coordinate space.
function: A CGFunction object. This object refers to your function for creating a radial shading.
extendStart: A Boolean value that specifies whether to extend the shading beyond the starting circle.
extendEnd: A Boolean value that specifies whether to extend the shading beyond the ending circle.

Returns a new Quartz radial shading or nil on any error.

A radial shading is a color blend that varies between two circles. To draw the shading, call the function CGContextDrawShading.

Available in Mac OS X version 10.2 and later.

54.1.9 CGCreateImageFromJPEGDataProviderMBS(dataprovider as Variant, decode as memoryblock, shouldInterpolate as boolean, intent as Integer) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new CGImage with JPEG data.
Example:

```
// Shows moon.jpg from the desktop folder
// shows in the window title if i,p or u is nil.

Sub Mainwindow.Paint(g As Graphics)
dim f as FolderItem
dim p as CGDataProviderMBS
dim i as CGImageMBS

f=SpecialFolder.Desktop.Child("moon.jpg")
p=CGDataProviderMBS.CreateWithFile(f)
if p=nil then
Title="p=nil"
else
i=CGCreateImageFromJPEGDataProviderMBS(p,nil,true,0)

if i=nil then
Title="i=nil"
else
window1.CGContextMBS.DrawPicture i,CGMakeRectMBS(0,0,i.Width,i.Height)
end if
end if

End Sub
```

Notes:

Dataprovider must be a CGDataProviderMBS object.

Parameters:

dataprovider:

A reference to a data provider supplying JPEG-encoded data.

decode:
Pass the decode array for the image. In the decode array, for each color component in the source color space, you provide a pair of values denoting the upper and lower limits of a range. For example, the decode array for a source image in the RGB color space would contain six entries total, consisting of one pair each for red, green, and blue. When the image is rendered, Quartz uses a linear transform to map the original component value into a relative number within your designated range that is appropriate for the destination color space. If you do not want to allow remapping of the image's color values, pass nil for the decode array. The memoryblock for the array needs to be filled with double values.

shouldInterpolate:
Pass true if interpolation should occur; otherwise, pass false . The interpolation setting specifies whether Quartz should apply a pixel-smoothing algorithm to the image. If you pass false , the image may appear jagged or pixelated when drawn on an output device with higher resolution than the image data.

intent:
Pass a CGColorRenderingIntent value specifying how Quartz should display colors in the image that are not located within the current color space of the graphics context. The rendering intent determines the exact method used to map colors from one color space to another.

54.1.10 CGCreateImageFromPNGDataProviderMBS(dataprovider as Variant, decode as memoryblock, shouldInterpolate as boolean, intent as Integer) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new CGImage with PNG data.
Notes:

Dataprovider must be a CGDataProviderMBS object.

Parameters:

dataprovider:
A reference to a data provider supplying JPEG-encoded data.

decode:
Pass the decode array for the image. In the decode array, for each color component in the source color space, you provide a pair of values denoting the upper and lower limits of a range. For example, the decode array for a source image in the RGB color space would contain six entries total, consisting of one pair each for red, green, and blue. When the image is rendered, Quartz uses a linear transform to map the original component value into a relative number within your designated range that is appropriate for the destination

color space. If you do not want to allow remapping of the image's color values, pass nil for the decode array. The memoryblock for the array needs to be filled with double values.

shouldInterpolate:
Pass true if interpolation should occur; otherwise, pass false . The interpolation setting specifies whether Quartz should apply a pixel-smoothing algorithm to the image. If you pass false , the image may appear jagged or pixelated when drawn on an output device with higher resolution than the image data.

intent:
Pass a CGColorRenderingIntent value specifying how Quartz should display colors in the image that are not located within the current color space of the graphics context. The rendering intent determines the exact method used to map colors from one color space to another.

54.1.11 CGCreateImageMBS(pic as picture) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGImageMBS from the given images.
Example:

```
dim c as CGImageMBS
dim pic, mask as Picture
// get picture and mask

c=CGCreateImageMBS(pic)
if c<>Nil then
// go on
end if
```

Notes: If the image has a mask, it is used.
See also:

- 54.1.12 CGCreateImageMBS(pic as picture, mask as picture) as CGImageMBS 10203

54.1.12 CGCreateImageMBS(pic as picture, mask as picture) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGImageMBS from the given images.
Example:

```
dim c as CGImageMBS
dim pic, mask as Picture
// get picture and mask
```

```
c=CGCreateImageMBS(pic, mask)
if c<>Nil then
// go on
end if
```

Notes:

The mask is taken from the second image.
With 11.3 plugins we are deprecating to pass a mask. The plugin prefers to simply take the mask or alpha channel of the picture itself.

- Notes and Tips

See also:

- 54.1.11 CGCreateImageMBS(pic as picture) as CGImageMBS 10203

54.1.14 CGMakePointMBS(x as Double, y as Double) as CGPointMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns a new CGPointMBS object.

54.1.15 CGMakeRectMBS(left as Double, top as Double, width as Double, height as Double) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns a new CGRectMBS object with the given value.

54.1.16 Xojo Developer Magazine

- 6.4, page 30: Creating PDF Files, How to create PDFs using the MBS Plugins by Christian Schmitz

54.1.17 CGMakeSizeMBS(width as Double, height as Double) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns a new CGSizeMBS object.

54.1.18 CGNewPDFDocumentMBS(consumer as CGDataConsumerMBS, MediaBox as CGRectMBS, title as string, author as string, creator as string) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Notes:

Title, author and creator are all optional.
Requires Mac OS X to work.
Keep yourself a reference to the consumer object so RB does not release it resulting in a crash.

54.1.19 CGNewPDFDocumentMBS(file as folderitem, MediaBox as CGRectMBS, title as string, author as string, creator as string) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Creates a PDF document.
Notes:

Title, author and creator are all optional.
Requires Mac OS X to work.

54.1.20 CGOpenPDFDocumentMBS(file as folderitem) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Opens a PDF document.
Notes:

RB 4.5 should do this perfectly, but older RB versions may have problems with longer file names.
Requires Mac OS X to work.

54.1.21 Blog Entries

- MBS REALbasic Plugins, version 10.4pr12
- MBS REALbasic Plugins, version 10.4pr11

54.1.22 CGSessionMBS as CGSessionMBS

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A function to return the current CoreGraphics session information.
Example:

```
dim c as CGSessionMBS

c=CGSessionMBS

MsgBox C.UserName+" "+str(c.Userid)
```

Notes:

Returns nil on any error.

Returns nil if the caller is not within a GUI session, as when the caller is a UNIX daemon, or if a system is configured to not run a Quartz GUI (window server disabled).

54.2 class CGAffineTransformMBS

54.2.1 class CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for an affine transformation.
Example:

```
dim af as CGAffineTransformMBS = CGAffineTransformMBS.Identity

MsgBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

af = af.Scale( 1, -1 )

MsgBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

af = af.Translate( 0, 100 )

MsgBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

dim r1 as CGRectMBS
dim r2 as CGRectMBS
```

r1=CGMakeRectMBS(100,100,100,100)

r2=r1.ApplyAffineTransform(af)

54.2.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr2

54.2.3 Blog Entries

- MBS Xojo Plugins, version 20.2pr2

54.2.4 Methods

54.2.5 Binary as MemoryBlock

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the binary data of the object for toolbox calls.

54.2.6 Concat(t as CGAffineTransformMBS) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Concatenate 't2' to 't1' and returne the result: t' = t1 * t2

54.2.7 Constructor

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: This constructor creates the identity transform: [1 0 0 1 0 0] .
See also:

- 54.2.8 Constructor(a as double, b as double, c as double, d as double, tx as double = 0.0, ty as double = 0.0) 10208
- 54.2.9 Constructor(p as Ptr) 10208

• 54.2.10 Constructor(transform as CGAffineTransformMBS) 10208

54.2.8 Constructor(a as double, b as double, c as double, d as double, tx as double = 0.0, ty as double = 0.0)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates the transformation with the given values.
See also:

• 54.2.7 Constructor 10207

• 54.2.9 Constructor(p as Ptr) 10208

• 54.2.10 Constructor(transform as CGAffineTransformMBS) 10208

54.2.9 Constructor(p as Ptr)

MBS MacCG Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates a new instance using data at the pointer.
Notes: Make sure the pointer is valid and has the right data and size.
See also:

• 54.2.7 Constructor 10207

• 54.2.8 Constructor(a as double, b as double, c as double, d as double, tx as double = 0.0, ty as double = 0.0) 10208

• 54.2.10 Constructor(transform as CGAffineTransformMBS) 10208

54.2.10 Constructor(transform as CGAffineTransformMBS)

MBS MacCG Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Creates a matrix object with copying the values.
Example:

```
dim m as new CGAffineTransformMBS(1,2,3,4,5,6)
dim n as new CGAffineTransformMBS(m)
MsgBox n
```

See also:

• 54.2.7 Constructor 10207

- 54.2.8 Constructor(a as double, b as double, c as double, d as double, tx as double = 0.0, ty as double = 0.0) 10208
- 54.2.9 Constructor(p as Ptr) 10208

54.2.11 EqualToTransform(t as CGAffineTransformMBS) as boolean

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Checks whether two affine transforms are equal.
Notes:

Returns true if t1 and t2 are equal, false otherwise.
Available in Mac OS X v10.4 and later.

54.2.12 Identity as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The identity transform: [1 0 0 1 0 0] .

54.2.13 Invert as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Invert 't' and return the result. If 't' has zero determinant, then 't' is returned unchanged.

54.2.14 IsIdentity as boolean

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Checks whether an affine transform is the identity transform.
Notes:

Returns true if t is the identity transform, false otherwise.
Available in Mac OS X v10.4 and later.

54.2.15 Make(a as double, b as double, c as double, d as double, tx as double = 0.0, ty as double = 0.0) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Return the transform [a b c d tx ty] .

54.2.16 MakeRotation(angle as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Return a transform which rotates by 'angle' radians: t' = [cos(angle) sin(angle) -sin(angle) cos(angle) 0 0]

54.2.17 MakeScale(sx as Double, sy as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Return a transform which scales by '(sx, sy)': t' = [sx 0 0 sy 0 0]

54.2.18 MakeTranslation(tx as Double, ty as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Return a transform which translates by '(tx, ty)': t' = [1 0 0 1 tx ty]

54.2.19 Operator_Convert as String

MBS MacCG Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Returns string value.

54.2.20 Operator_Multiply(other as CGAffineTransformMBS) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Multiplies both matrix where self is on the left side.

54.2.21 Operator_MultiplyRight(other as CGAffineTransformMBS) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Multiplies both matrix where self is on the right side.

54.2.22 Rotate(angle as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Rotate 't' by 'angle' radians and return the result: t' = [cos(angle) sin(angle) -sin(angle) cos(angle) 0 0] * t

54.2.23 Scale(sx as Double, sy as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Scale 't' by '(sx, sy)' and return the result: t' = [sx 0 0 sy 0 0] * t

54.2.24 Translate(tx as Double, ty as Double) as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Translate 't' by '(tx, ty)' and return the result: t' = [1 0 0 1 tx ty] * t
Example:

```
dim t as new CGAffineTransformMBS(1,0,0,1,1,1)
t=t.Translate(2,3)

MsgBox str(T.A)+" "+str(t.B)+" "+str(t.C)+" "+str(t.D)+" "+str(t.TX)+" "+str(t.TY)

// shows 1 0 0 1 3 4
```

54.2.25 Properties

54.2.26 A as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The A value.
Notes: (Read and Write property)

54.2.27 B as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The B value.
Notes: (Read and Write property)

54.2.28 C as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The C value.
Notes: (Read and Write property)

54.2.29 D as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The D value.
Notes: (Read and Write property)

54.2.30 StringValue as String

MBS MacCG Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Returns string value.
Notes: (Read only property)

54.2.31 TX as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The TX value.
Notes: (Read and Write property)

54.2.32 TY as Double

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The TY value.
Notes: (Read and Write property)

54.3 class CGBitmapContextMBS

54.3.1 class CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class to hold a CoreGraphics bitmap context.
Example:

```
Sub Paint(g As Graphics)
dim c as CGPictureContextMBS
dim w as CGContextMBS // of window
dim p,m as Picture

c=new CGPictureContextMBS(100,100)

c.ClearRect CGMakeRectMBS(0,0,100,100)
c.SetRGBFillColor 1,0,0,1
c.FillRect CGMakeRectMBS(0,0,50,50)

w=window1.CGContextMBS // we are inside paint event!
// Draw using CGImage
w.DrawPicture c.CGImage(false,0),CGMakeRectMBS(0,0,c.BitmapWidth,c.BitmapHeight)
w.Flush

// Draw using RB picture, so we can see whether it looks equal.
m=c.CopyPictureMask
p=New Picture(m.Width,m.Height,32)
p.Graphics.DrawPicture c.CopyPicture,0,0
p.Mask.Graphics.DrawPicture m,0,0
g.DrawPicture p,0,0

End Sub
```

Notes:

If the RB graphics class is like a CGContext, the RB picture class (created using NewPicture) is something like a CGBitmapContext.
Subclass of the CGContextMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

54.3.4 Methods

54.3.5 CGImage(shouldInterpolate as boolean = false, intent as Integer = 0) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Creates a CGImageMBS object referencing the CGBitmapContext object.
Example:

```
dim c as CGPictureContextMBS
dim w as CGContextMBS // of window

c=new CGPictureContextMBS(100,100)

c.SetRGBFillColor 1,0,0,1
c.FillRect CGMakeRectMBS(0,0,50,50)

w=window1.CGContextMBS // we are inside paint event!
w.DrawPicture c.CGImage(false,0),CGMakeRectMBS(0,0,c.BitmapWidth,c.BitmapHeight)
w.Flush
```

Notes:

You will crash your application if you use this Image after the CGBitmapContext object was destroyed.
Changes made to the connected CGBitmapContext will be seen in the CGImage.
Returns nil on low memory.

Constants for intent:

Set shouldInterpolate to true if the image should use interpolation.

kCGRenderingIntentDefault	0
kCGRenderingIntentAbsoluteColorimetric	1
kCGRenderingIntentRelativeColorimetric	2
kCGRenderingIntentPerceptual	3
kCGRenderingIntentSaturation	4

54.3.6 Constructor

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The private constructor.

54.3.7 Create(data as memoryblock, width as Integer, height as Integer, bitsPerComponent as Integer, bytesPerRow as Integer, colorspace as CGColorSpaceMBS, alphaInfo as Integer) as CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Create a bitmap context.
Notes:

The context draws into a bitmap which is 'width' pixels wide and 'height' pixels high. The number of components for each pixel is specified by 'colorspace', which also may specify a destination color profile. The number of bits for each component of a pixel is specified by 'bitsPerComponent', which must be 1, 2, 4, or 8. Each row of the bitmap consists of 'bytesPerRow' bytes, which must be at least '(width * bitsPerComponent * number of components + 7)/8' bytes. 'data' points a block of memory at least 'bytesPerRow * height' bytes. 'alphaInfo' specifies whether the bitmap should contain an alpha channel, and how it's to be generated.

Fails if data=nil or colorspace=nil.
The memoryblock is not referenced and not stored, so keep it alive while using the BitmapContext object.

Returns nil on any error.

data
A pointer to the destination in memory where the drawing is to be rendered. The size of this memoryblock should be at least(bytesPerRow*height) bytes. Can be nil to let system allocate it.

width
The width of the bitmap in pixels.

height
The height of the bitmap in pixels.

bitsPerComponent
The number of bits to use for each component of a pixel in memory. Allowable values are 4, 5, or 8. For example, for a 32-bit RGB(A) colorspace, you would specify a value of 8 bits per color component. In combination, the number of bits per component, the color space, and the alpha value determine which bitmap context formats Quartz supports.

bytesPerRow
The number of bytes of memory to use per row of the bitmap. This value must be at least the product of the width and bitsPerComponentparameters, times the number of components per pixel. The result should be divided by 8 and rounded up to the nearest whole number to obtain the number of bytes to use per row. That is, the value must be at least (((width)*(bits per component)*(number of components per pixel))+7)/8 bytes. For a given row, Quartz stores bitmap data for the first width pixels and ignores any remaining bytes. The colorspace value referenced by the colorspace parameter specifies the number of components for each pixel. Can be zero to let system decide (especially if data is nil)

colorspace
The color space to use for the bitmap context.

alphaInfo
A CGImageAlphaInfo constant specifying whether the bitmap should contain an alpha channel and how it is to be generated. The alpha value determines the opacity of a pixel when it is drawn.

Supported pixel formats:

Pixel format	Color space	Bits per pixel	Bits per component	Alpha option
Gray_8	Grayscale	8	8	kCGImageAlphaNone
RGB555	RGB	16	5	kCGImageAlphaNoneSkipFirst
XRGB_32	RGB	32	8	kCGImageAlphaNoneSkipFirst
ARGB_32	RGB	32	8	kCGImageAlphaPremultipliedFirst
RGBX_32	RGB	32	8	kCGImageAlphaNoneSkipLast
RGBA_32	RGB	32	8	kCGImageAlphaPremultipliedLast

Quartz does not support the following formats in a bitmap context:

- 1-bit grayscale
- 24-bit RGB
- CMYK (any depth)

CGImageAlphaInfo constants:

See also:

- 54.3.8 Create(Other as CGBitmapContextMBS, NewColorspace as CGColorSpaceMBS) as CGBitmapContextMBS 10218

kCGImageAlphaNone	0	
kCGImageAlphaPremultipliedLast	1	For example, premultiplied RGBA
kCGImageAlphaPremultipliedFirst	2	For example, premultiplied ARGB
kCGImageAlphaLast	3	For example, non-premultiplied RGBA
kCGImageAlphaFirst	4	For example, non-premultiplied ARGB
kCGImageAlphaNoneSkipLast	5	Equivalent to kCGImageAlphaNone.
kCGImageAlphaNoneSkipFirst	6	

54.3.8 Create(Other as CGBitmapContextMBS, NewColorspace as CGColorSpaceMBS) as CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Creates a new bitmap object.
Example:

```
dim pic as new Picture(100,100) // some picture
dim ICCProfileData as memoryblock // get a IIC Profile somewhere

dim colorspace as CGColorSpaceMBS = CGColorSpaceMBS.CreateWithICCProfile(ICCProfileData)
dim bitmap as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)
dim zweiteBitmap as CGBitmapContextMBS = bitmap.Create(bitmap, colorspace)
```

Notes: The new bitmap object uses same data as existing object, just accesses the pixels using the new color space.
See also:

- 54.3.7 Create(data as memoryblock, width as Integer, height as Integer, bitsPerComponent as Integer, bytesPerRow as Integer, colorspace as CGColorSpaceMBS, alphaInfo as Integer) as CGBitmapContextMBS 10216

54.3.9 CreateImage as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Return an image containing a snapshot of the bitmap context.
Example:

```
// a new picture in RB
dim pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
dim b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// color set to full red
b.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
```

```
// draw ellipse
dim r as CGRectMBS = CGRectMBS.Make(0, 0, 500, 500)
b.FillEllipseInRect r

// flush drawings
b.Flush

// now try CGImage creation
dim cgimage as CGImageMBS = b.CreateImage

// and display by converting to a new picture
Backdrop = cgimage.Picture
```

Notes:

If context is not a bitmap context, or if the image cannot be created for any reason, this function returns NULL. This is a "copy" operation subsequent changes to context will not affect the contents of the returned image.

Note that in some cases the copy will actually follow "copy-on-write" semantics, so that the actual physical copy of the bits will only occur if the underlying data in the bitmap context is modified. As a consequence, you may wish to use the resulting image and release it before performing more drawing into the bitmap context; in this way, the actual physical copy of the data may be avoided.

54.3.10 CreateRGB(data as memoryblock, width as Integer, height as Integer, bytesPerRow as Integer, colorspace as CGColorSpaceMBS = nil) as CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Convenience function to handle RGB data.
Notes:

Same as Create method, but for RGB data.
Converts data from 3 byte/pixel to 4 byte/pixel and than creates CGBitmapContextMBS.
Colorspace is optional and defaults to Generic RGB.
Returns nil on error, raises OutOfBounds exception for invalid parameters.

54.3.11 CreateWithPicture(Pic as Picture) as CGBitmapContextMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a CGBitmapContext referencing the given picture.
Example:

```
// a new picture in RB
dim pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
dim b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// color set to full red
b.SetRGBFillColor 1.0, 0.0, 0.0, 1.0

// draw ellipse
dim r as CGRectMBS = CGRectMBS.Make(0, 0, 500, 500)
b.FillEllipseInRect r

// flush drawings
b.Flush

// and show
Backdrop = pic
```

Notes:

Only for Cocoa target.
The plugin will do a clear cache on the picture in the destructor.

54.3.12 Properties

54.3.13 BitmapAlphaInfo as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the alpha info of the bitmap.
Example:

```
// a new picture in RB
dim pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
dim b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows 2 for kCGImageAlphaPremultipliedFirst
MsgBox str(b.BitmapAlphaInfo)
```

Notes:

Returns 0 on any error.

CGImageAlphaInfo constants:

kCGImageAlphaNone	0	
kCGImageAlphaPremultipliedLast	1	For example, premultiplied RGBA
kCGImageAlphaPremultipliedFirst	2	For example, premultiplied ARGB
kCGImageAlphaLast	3	For example, non-premultiplied RGBA
kCGImageAlphaFirst	4	For example, non-premultiplied ARGB
kCGImageAlphaNoneSkipLast	5	Equivalent to kCGImageAlphaNone.
kCGImageAlphaNoneSkipFirst	6	

(Read only property)

54.3.14 BitmapBitsPerComponent as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the bits per component of the bitmap.
Example:

```
// a new picture in RB
dim pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
dim b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows 8
MsgBox str(b.BitmapBitsPerComponent)
```

Notes:

Returns 0 on any error.
(Read only property)

54.3.15 BitmapBitsPerPixel as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the bits per pixel of the bitmap.
Example:

```
// a new picture in RB
dim pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
dim b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows 32
MsgBox str(b.BitmapBitsPerPixel)
```

Notes:

Returns 0 on any error.
(Read only property)

54.3.16 BitmapBytesPerRow as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the bytes per row of the bitmap.
Example:

```
// a new picture in RB
dim pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
dim b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows 2000
MsgBox str(b.BitmapBytesPerRow)
```

Notes:

Returns 0 on any error.
(Read only property)

54.3.17 BitmapColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the colorspace used for this bitmap.
Notes:

Returns nil on any error.

This is not the same RB object used when you created the bitmap, but it will contain the same handle.
(Read only property)

54.3.18 BitmapData as MemoryBlock

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns a memoryblock for the data of the bitmap.
Notes:

Returns nil on any error.

This is not the same RB memoryblock object as you passed to the Create function, but it will point to the same bytes in memory.
(Read only property)

54.3.19 BitmapHeight as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the height of the bitmap.
Example:

```
// a new picture in RB
dim pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
dim b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows 500
MsgBox str(b.BitmapHeight)
```

Notes:

Returns 0 on any error.
(Read only property)

54.3.20 BitmapInfo as Integer

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Obtains the bitmap information associated with a bitmap graphics context.
Example:

```
// a new picture in RB
dim pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
dim b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// shows info: 2 for kCGImageAlphaPremultipliedFirst
MsgBox str(b.BitmapInfo)
```

Notes:

The bitmap info of the bitmap graphics context or 0 if c is not a bitmap graphics context. See CGImage Reference for a description of the Image Bitmap Information constants that can be returned.

The CGBitmapInfo data returned by the function specifies whether the bitmap contains an alpha channel and how the alpha channel is generated, along with whether the components are floating-point or integer.
(Read only property)

54.3.21 BitmapWidth as Integer

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns the width of the bitmap.
Example:

```
// a new picture in RB
dim pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
dim b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// show info: 500
MsgBox str(b.BitmapWidth)
```

Notes:

Returns 0 on any error.
(Read only property)

54.4 class CGColorMBS

54.4.1 class CGColorMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: A class for a CoreGraphics color object.

54.4.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr16

54.4.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr16

54.4.4 Methods

54.4.5 Alpha as Double

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The alpha value of the color.

54.4.6 Black as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The black color in the Generic gray color space.

54.4.7 Clear as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The clear color in the Generic gray color space.

54.4.8 ColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The colorspace of this color.
Notes: May be nil if unkown.

54.4.9 Components as memoryblock

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The components of the color as a memoryblock.
Notes:

The memoryblock contains double properties.
m.double(0), m.double(4), etc.

54.4.10 Copy as CGColorMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Creates a copy of the color.
Notes: Returns nil on any error.

54.4.11 CopyWithAlpha(alpha as Double) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Makes a new copy of the color with a different alpha value.
Notes: Returns nil on any error.

54.4.12 Create(colorspace as CGColorSpaceMBS, components as memoryblock) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new color with the given components.
Example:

```
dim c as color = & cFF0000

Dim m As MemoryBlock

m=NewMemoryBlock(16)
m.SingleValue(0)=c.Red/256
m.SingleValue(4)=c.Green/256
```

```
m.SingleValue(8)=c.Blue/256
m.SingleValue(12)=1.0

dim colorspace as CGColorSpaceMBS

colorspace=CGColorSpaceMBS.CreateDeviceRGB

if colorspace=nil or colorspace.Handle=0 then
MsgBox "Failed to get RGB color space!"
Return
end if

Dim col As CGColorMBS

col=CGColorMBS.Create(colorspace, m)

if col=nil or col.Handle=0 then
MsgBox "Failed to create color."
Return
end if

MsgBox str(Col.NumberOfComponents)
```

Notes: This method was called NewCGColorMBS in earlier MBS Plugins.
See also:

- 54.4.13 Create(colorspace as CGColorSpaceMBS, components() as Double) as CGColorMBS 10227

54.4.13 Create(colorspace as CGColorSpaceMBS, components() as Double) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a new color with the given components.
Notes:

Supports up to 32 components.
Returns nil on any error.
See also:

- 54.4.12 Create(colorspace as CGColorSpaceMBS, components as memoryblock) as CGColorMBS 10226

54.4.14 CreateDeviceCMYK(cyan as Double, magenta as Double, yellow as Double, black as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a color in the device CMYK color space.
Notes:

cyan: A cyan value (0.0 - 1.0).
magenta: A magenta value (0.0 - 1.0).
yellow: A yellow value (0.0 - 1.0).
black: A black value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a color object.

54.4.15 CreateDeviceGray(gray as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a color in the device gray color space.
Notes:

gray: A grayscale value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a color object.

54.4.16 CreateDeviceRGB(red as Double, green as Double, blue as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a color in the device RGB color space.
Notes:

red: A red component value (0.0 - 1.0).
green: A green component value (0.0 - 1.0).
blue: A blue component value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a new color object.

54.4.17 CreateGenericCMYK(cyan as Double, magenta as Double, yellow as Double, black as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a color in the Generic CMYK color space.
Notes:

cyan: A cyan value (0.0 - 1.0).
magenta: A magenta value (0.0 - 1.0).
yellow: A yellow value (0.0 - 1.0).
black: A black value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a color object.
Available in Mac OS X v10.5 and later.

54.4.18 CreateGenericGray(gray as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a color in the Generic gray color space.
Notes:

gray: A grayscale value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a color object.
Available in Mac OS X v10.5 and later.

54.4.19 CreateGenericRGB(red as Double, green as Double, blue as Double, alpha as Double = 1.0) as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a color in the Generic RGB color space.
Notes:

red: A red component value (0.0 - 1.0).
green: A green component value (0.0 - 1.0).
blue: A blue component value (0.0 - 1.0).
alpha: An alpha value (0.0 - 1.0).

Returns a new color object.
Available in Mac OS X v10.5 and later.

54.4.20 Equal(secondColor as CGColorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: True if both colors have equal values.
Notes: False on any error.

54.4.21 NumberOfComponents as Integer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The number of components.
Notes: Should be 3 for RGB and 4 for CMYK.

54.4.22 White as CGColorMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The white color in the Generic gray color space.

54.4.23 Properties

54.4.24 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The handle to the CGColorRef used internal.
Notes: (Read and Write property)

54.5 class CGColorSpaceMBS

54.5.1 class CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a CoreGraphics color space.

54.5.4 Methods

54.5.5 CreateCalibratedGray(whitePoint() as Double, blackPoint() as Double, gamma as Double) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a calibrated gray colorspace.
Notes:

WhitePoint is an array of 3 numbers (type double) specifying the tristimulus value, in the CIE 1931 XYZ-space, of the diffuse white point.
BlackPoint is an array of 3 numbers (type double) specifying the tristimulus value, in CIE 1931 XYZ-space, of the diffuse black point.
Gamma defines the gamma for the gray component.
Returns nil on any error.

54.5.6 CreateCalibratedRGB(whitePoint() as Double, blackPoint() as Double, gamma() as Double, matrix() as Double) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a calibrated RGB colorspace.
Notes:

WhitePoint is an array of 3 numbers (type double) specifying the tristimulus value, in the CIE 1931 XYZ-space, of the diffuse white point.
BlackPoint is an array of 3 numbers (type double) specifying the tristimulus value, in CIE 1931 XYZ-space, of the diffuse black point.
Gamma is an array of 3 numbers (type double) specifying the gamma for the red, green, and blue components of the color space.
Matrix is an array of 9 numbers (type double) specifying the linear interpretation of the gamma-modified RGB values of the colorspace with respect to the final XYZ representation.
Returns nil on any error.

54.5.7 CreateDeviceCMYK as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a DeviceCMYK colorspace.
Notes: Returns nil on any error.

54.5.8 CreateDeviceGray as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a DeviceGray colorspace.
Notes: Returns nil on any error.

54.5.9 CreateDeviceRGB as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a DeviceRGB colorspace.
Notes:

Returns nil on any error.

Old name: CGColorSpaceCreateDeviceRGBMBS

54.5.10 CreateLab(whitePoint() as Double, blackPoint() as Double, range() as Double) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an L*a*b* colorspace.
Notes:

WhitePoint is an array of 3 numbers (type double) specifying the tristimulus value, in the CIE 1931 XYZ-space, of the diffuse white point.
BlackPoint is an array of 3 numbers (type double) specifying the tristimulus value, in CIE 1931 XYZ-space, of the diffuse black point.
Range is an array of four numbers (type double) specifying the range of valid values for the a* and b* components of the color space.
Returns nil on any error.

54.5.11 CreatePattern(baseSpace as CGColorSpaceMBS) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a pattern colorspace.
Notes:

BaseSpace is the underlying colorspace of the pattern colorspace. For colored patterns, baseSpace should be nil; for uncolored patterns, baseSpace specifies the colorspace of colors which will be painted through the

pattern.

Returns nil on any error.

54.5.12 CreateWithHandle(Handle as Integer) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Creates a CGColorSpace for a handle.
Example:

```
dim n as NSColorSpaceMBS = NSColorSpaceMBS.genericCMYKColorSpace
dim c as CGColorSpaceMBS = CGColorSpaceMBS.CreateWithHandle(n.CGColorSpaceHandle)
MsgBox c.Name
```

Notes:

Sometimes you need to create CGColorSpaceMBS from NSColorSpaceMBS or some handle you got from an OS function and than you can use this function.
Returns nil on any error. Retains the handle.

54.5.13 CreateWithICCProfile(ICCProfileData as memoryblock) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates an ICC-based color space using the ICC profile contained in the specified data.
Notes:

data: The data containing the ICC profile to set for the new color space.
Returns a new color space based on the specified profile.
See also:

- 54.5.14 CreateWithICCProfile(ICCProfileData as string) as CGColorSpaceMBS 10234

54.5.14 CreateWithICCProfile(ICCProfileData as string) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates an ICC-based color space using the ICC profile contained in the specified data.
Notes:

data: The data containing the ICC profile to set for the new color space.
Returns a new color space based on the specified profile.

See also:

- 54.5.13 CreateWithICCProfile(ICCProfileData as memoryblock) as CGColorSpaceMBS 10234

54.5.15 CreateWithName(name as string) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Create a color space using name as the identifier for the color space.
Notes: Pass one of the kCGColorSpace* string constants.

54.5.16 CreateWithPlatformColorSpace(Handle as Integer) as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a CGColorSpace using a Colorsync Profile Handle.
Notes: Returns nil on any error.

54.5.17 ICCProfile as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns a copy of the ICC profile of the provided color space.
Notes:

The ICC profile or "" if the color space does not have an ICC profile.

Available in Mac OS X v10.5 and later.

54.5.18 kCGColorSpaceACESCGLinear as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes:

The name of the ACEScg color space. For more information, see "ACEScg — A Working Space for CGI Render and Compositing", Version 1.0.1, Academy of Motion Picture Arts and Sciences (http://www.oscars.org/science-technology/sci-tech-projects/aces).

Available in OS X v10.11 and later.

54.5.19 kCGColorSpaceAdobeRGB1998 as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the Adobe RGB (1998) color space. For more information, see "Adobe RGB (1998) Color Image Encoding", Version 2005-05, Adobe Systems Inc. (http://www.adobe.com).

54.5.20 kCGColorSpaceDCIP3 as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes:

The name of the DCI P3 color space, created by Digital Cinema Initiatives, LLC. This color space is the digital cinema standard.

Available in OS X v10.11 and later.

54.5.21 kCGColorSpaceDisplayP3 as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes:

The name of the Display P3 color space, created by Apple Inc. This color space uses the DCI P3 primaries, a D65 white point, and the same gamma curve as the sRGB color space.

Available in OS X v10.10 and later.

54.5.22 kCGColorSpaceGenericCMYK as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the "Generic" CMYK color space.

54.5.23 kCGColorSpaceGenericGray as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the "Generic" gray color space.

54.5.24 kCGColorSpaceGenericGrayGamma2_2 as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes:

The name of the generic gray color space with a gamma value of 2.2.

Available in OS X v10.6 and later.

54.5.25 kCGColorSpaceGenericRGB as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the "Generic" RGB color space.

54.5.26 kCGColorSpaceGenericRGBLinear as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the "Generic" linear RGB color space. This is the same as kCGColorSpaceGenericRGB but with a 1.0 gamma.

54.5.27 kCGColorSpaceGenericXYZ as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes:

The name of the generic XYZ color space.

Available in OS X v10.11 and later.

54.5.28 kCGColorSpaceITUR_2020 as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes:

The name of the ITU-R Recommendation BT.2020 color space. For more information, see "BT.2020 : Parameter values for ultra-high definition television systems for production and international programme exchange", Version 2014-06, International Telecommunication Union (https://www.itu.int/rec/R-REC-BT.2020).

Available in OS X v10.11 and later.

54.5.29 kCGColorSpaceITUR_709 as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes:

The name of the ITU-R Recommendation BT.2020 color space. For more information, see "BT.2020 : Parameter values for ultra-high definition television systems for production and international programme exchange", Version 2014-06, International Telecommunication Union (https://www.itu.int/rec/R-REC-BT.2020).

Available in OS X v10.11 and later.

54.5.30 kCGColorSpaceROMMRGB as string

MBS MacCG Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes:

The name of the ROMM RGB color space. For more information, see "Reference Output Medium Metric RGB Color Space (ROMM RGB) White Paper", Version 2.1, Eastman Kodak Company (http://www.kodak.com/global/plugins/acrobat/en/professional/products/software/colorFlow/romm_rgb.pdf).

Available in OS X v10.11 and later.

54.5.31 kCGColorSpaceSRGB as string

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the names for color spaces.
Notes: The name of the sRGB color space. The capitalization in the name, while strictly inaccurate, avoids interpretational ambiguity. For more information, see IEC 61966-2-1 (1999-10): "Multimedia systems and equipment - Colour measurement and management - Part 2-1: Colour management - Default RGB colour space - sRGB".

54.5.32 Properties

54.5.33 BaseColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the base color space of a pattern or indexed color space.
Notes:

The base color space if the space parameter is a pattern or indexed color space; otherwise, nil.

Available in Mac OS X v10.5 and later.
(Read only property)

54.5.34 ColorTableCount as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the number of entries in the color table of an indexed color space.
Notes:

The number of entries in the color table of the space parameter if the color space is an indexed color space; otherwise, returns 0.

Available in Mac OS X v10.5 and later.
(Read only property)

54.5.35 Description as String

MBS MacCG Plugin, Plugin Version: 15.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The description text.
Example:

```
dim c as CGColorSpaceMBS = window1.CGColorSpaceMBS
MsgBox c.description
```

Notes: (Read only property)

54.5.36 Handle as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The handle to the color space.
Notes:

(a CGColorSpaceRef)
(Read and Write property)

54.5.37 Model as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the color space model of the provided color space.
Notes:

Available in Mac OS X v10.5 and later.

Use this constants:
CGColorSpaceMBS.kCGColorSpaceModelUnknown
CGColorSpaceMBS.kCGColorSpaceModelCMYK
CGColorSpaceMBS.kCGColorSpaceModelDeviceN
CGColorSpaceMBS.kCGColorSpaceModelIndexed
CGColorSpaceMBS.kCGColorSpaceModelLab
CGColorSpaceMBS.kCGColorSpaceModelMonochrome
CGColorSpaceMBS.kCGColorSpaceModelPattern
CGColorSpaceMBS.kCGColorSpaceModelRGB
(Read only property)

54.5.38 ModelText as String

MBS MacCG Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The model as text.
Notes:

For viewing in debugger.
(Read only property)

54.5.39 Name as String

MBS MacCG Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Queries the name of the colorspace.
Notes:

Not all CGColorspace objects have names. Some have only ICC Profile and you can get name via Name property in LCMS2ProfileMBS if you open the profile with LCMS.
(Read only property)

54.5.40 NumberOfComponents as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the number of components.
Notes:

typical 1 for grayscale, 3 for RGB and 4 for CMYK.
(Read only property)

54.5.41 Constants

54.5.42 kCGColorSpaceModelCMYK=2

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the colorspace model constants.
Notes:

A CMYK color space model.

Available in Mac OS X v10.5 and later.

54.5.43 kCGColorSpaceModelDeviceN=4

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the colorspace model constants.
Notes:

A DeviceN color space model.

Available in Mac OS X v10.5 and later.

54.5.44 kCGColorSpaceModelIndexed=5

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the colorspace model constants.
Notes:

An indexed color space model.

Available in Mac OS X v10.5 and later.

54.5.45 kCGColorSpaceModelLab=3

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the colorspace model constants.
Notes:

A Lab color space model.

Available in Mac OS X v10.5 and later.

54.5.46 kCGColorSpaceModelMonochrome=0

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the colorspace model constants.
Notes:

A monochrome color space model.

Available in Mac OS X v10.5 and later.

54.5.47 kCGColorSpaceModelPattern=6

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the colorspace model constants.
Notes:

A pattern color space model.

Available in Mac OS X v10.5 and later.

54.5.48 kCGColorSpaceModelRGB=1

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the colorspace model constants.
Notes:

An RGB color space model.

Available in Mac OS X v10.5 and later.

54.5.49 kCGColorSpaceModelUnknown=-1

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the colorspace model constants.
Notes:

An unknown color space model.

Available in Mac OS X v10.5 and later.

54.5.50 kCGRenderingIntentAbsoluteColorimetric=1

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the color rendering intents constants.
Notes: Map colors outside of the gamut of the output device to the closest possible match inside the gamut of the output device. This can produce a clipping effect, where two different color values in the gamut of the graphics context are mapped to the same color value in the output device's gamut. Unlike the relative colorimetric, absolute colorimetric does not modify colors inside the gamut of the output device.

54.5.51 kCGRenderingIntentDefault=0

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the color rendering intents constants.
Notes: The default rendering intent for the graphics context.

54.5.52 kCGRenderingIntentPerceptual=3

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the color rendering intents constants.
Notes: Preserve the visual relationship between colors by compressing the gamut of the graphics context to fit inside the gamut of the output device. Perceptual intent is good for photographs and other complex, detailed images.

54.5.53 kCGRenderingIntentRelativeColorimetric=2

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the color rendering intents constants.
Notes: Map colors outside of the gamut of the output device to the closest possible match inside the gamut of the output device. This can produce a clipping effect, where two different color values in the gamut of the graphics context are mapped to the same color value in the output device's gamut. The relative colorimetric shifts all colors (including those within the gamut) to account for the difference between the white point of the graphics context and the white point of the output device.

54.5.54 kCGRenderingIntentSaturation=4

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the color rendering intents constants.
Notes: Preserve the relative saturation value of the colors when converting into the gamut of the output device. The result is an image with bright, saturated colors. Saturation intent is good for reproducing images with low detail, such as presentation charts and graphs.

54.6 class CGContextMBS

54.6.1 class CGContextMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics context.
Example:

```
Dim p As New Picture(200, 200)
Dim g As Graphics = p.Graphics

// Clear image with white
g.ForeColor = &cFFFFFF
g.FillRect 0, 0, g.Width, g.Height

Dim c As New CGContextMBS(g)

c.SetRGBFillColor(1, 0, 0)

// coordinates are swapped in CGContext, so y = 20 means 20 pixels from bottom of picture!

Const x = 10
Const y = 20
Const w = 120
Const h = 100

c.FillRect New CGRectMBS(x, y, w, h)

Self.Backdrop = p
```

Notes:

If the handle property has a non zero value, the destructor of this class will release the context reference.

If you create this in a method based on a window, please release it within that method. e.g. in a paint event, create it and let RB delete the last reference on the end of the method. Else you may see crashes as the context is still being around while the graphics port has been released.

54.6.6 Methods

54.6.7 AddArc(x as Double, y as Double, radius as Double, startangle as Double, endangle as Double, clockwise as boolean)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Add an arc to the current path.
Example:

```
const r=100.0
dim c as CGContextMBS
// draws a circle with radius r
c.BeginPath
c.SetLineWidth 5
c.SetGrayStrokeColor 0,1
c.AddArc 250,150,r,0,360,false
c.StrokePath
```

Notes: Add an arc of a circle to the context's path, possibly preceded by a straight line segment. '(x, y)' is the center of the arc; 'radius' is its radius; 'startAngle' is the angle to the first endpoint of the arc; 'endAngle' is the angle to the second endpoint of the arc; and 'clockwise' is true if the arc is to be drawn clockwise, false otherwise. 'startAngle' and 'endAngle' are measured in radians.

54.6.8 addArcToPath(x as Double, y as Double, w as Double, h as Double, startAngle as Integer, arcAngle as Integer)

MBS MacCG Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Adds an arc to the current path.

54.6.9 AddArcToPoint(x1 as Double, y1 as Double, x2 as Double, y2 as Double, radius as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Add an arc to the current path.
Notes: Add an arc of a circle to the context's path, possibly preceded by a straight line segment. 'radius' is the radius of the arc. The arc is tangent to the line from the current point to '(x1, y1)', and the line from '(x1, y1)' to '(x2, y2)'.

54.6.10 AddCurveToPoint(cp1x as Double, cp1y as Double, cp2x as Double, cp2y as Double, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Append a cubic Bezier curve from the current point to (x,y), with control points (cp1x, cp1y) and (cp2x, cp2y)

54.6.11 AddEllipseInRect(r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add an ellipse inside rect to the current path of context.
Notes:

See the function CGPathMBS.AddEllipseInRect for more information on how the path for the ellipse is constructed.
Requires Mac OS X 10.4.

54.6.12 AddLines(p() as CGPointMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Add a set of lines to the context's path.
Notes:

Currently this function is not available to RB versions before 3.5.
Note that the p parameter is an array of CGPointMBS and not just one.

54.6.13 AddLineToPoint(x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Append a straight line segment from the current point to (x, y).
Example:

```
dim c as CGContextMBS

c=window1.CGContextMBS

c.SetRGBStrokeColor 1,0,0,1
c.BeginPath
c.MoveToPoint 0,0
c.AddLineToPoint 100,100
```

c.StrokePath
c.Flush

54.6.14 addOvalToPath(x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Adds an oval to the current path.

54.6.15 AddPath(path as CGPathMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add path to the path of context.
Notes:

The points in path are transformed by the CTM of context before they are added.
Requires Mac OS X 10.2.

54.6.16 AddQuadCurveToPoint(cpx as Double, cpy as Double, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Append a quadratic curve from the current point to (x, y), with control point (cpx, cpy).

54.6.17 AddRect(r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Add a double rect to the context's path.

54.6.18 AddRects(r() as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Add a set of rects to the context's path.
Notes:

Currently this function is not available to RB versions before 3.5.
Note that the r parameter is an array of CGRectMBS and not just one.

54.6.19 addRoundedRectToPath(x as Double, y as Double, w as Double, h as Double, arcWidth as Double, arcHeight as Double)

MBS MacCG Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Adds a round rectangle to the current path.

54.6.20 BeginPage(mediabox as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Begin a new page.

54.6.21 BeginPath

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Begin a new path. The old path is discarded.
Example:

```
# If XojoVersion >= 2019.02 Then
Dim p As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Dim c As CGContextMBS = CGContextMBS.contextWithCGContext(p)
# Else
Dim h As Integer = g.Handle(g.HandleTypeCGContextRef)
Dim c As CGContextMBS = CGContextMBS.contextWithCGContext(h)
# EndIf

c.SetGrayStrokeColor(0,1)
c.SetGrayFillColor(0,1)
c.BeginPath
c.SetLineWidth 0.5
c.MoveToPoint 50, 550
c.AddLineToPoint 100, 600
c.StrokePath
c.Flush
c = nil
```

Notes: Note that a context has a double path in use at any time: a path is not part of the graphics state.

54.6.22 BeginTransparencyLayer(auxiliaryInfo as Dictionary = nil)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Begin a transparency layer in context.
Notes:

All subsequent drawing operations until a corresponding EndTransparencyLayer are composited into a fully transparent backdrop (which is treated as a separate destination buffer from the context). After the transparency layer is ended, the result is composited into the context using the global alpha and shadow state of the context. This operation respects the clipping region of the context. After a call to this function, all of the parameters in the graphics state remain unchanged with the exception of the following:

- The global alpha is set to 1.
- The shadow is turned off.
- The blend mode is set to 'kCGBlendModeNormal'.

Ending the transparency layer restores these parameters to the values they had before BeginTransparency-Layer was called. Transparency layers may be nested.

54.6.23 BeginTransparencyLayerWithRect(r as CGRectMBS, auxiliaryInfo as Dictionary = nil)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Begin a transparency layer in context.
Notes: This function is identical to BeginTransparencyLayer except that the content of the transparency layer will be bounded by rect (specified in user space).

54.6.24 clearRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Clears the background.
Notes: Remeber that in CoreGraphics the position 0/0 is in the bottom left corner. In Xojo 0/0 is in the top left corner.

54.6.25 clip

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Clips the current path.
Notes: Intersect the context's path with the current clip path and use the resulting path as the clip path for subsequent rendering operations. Use the winding-number fill rule for deciding what's inside the path.

54.6.26 ClipToMask(rect as CGRectMBS, mask as CGImageMBS)

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Maps a mask into the specified rectangle and intersects it with the current clipping area of the graphics context.
Notes:

rect: The rectangle to map the mask parameter to.
mask: An image or an image mask. If mask is an image, then it must be in the DeviceGray color space, may not have an alpha component, and may not be masked by an image mask or masking color.

If the mask parameter is an image mask, then Quartz clips in a manner identical to the behavior seen with the function DrawImage—the mask indicates an area to be left unchanged when drawing. The source samples of the image mask determine which points of the clipping area are changed, acting as an "inverse alpha" value. If the value of a source sample in the image mask is S, then the corresponding point in the current clipping area is multiplied by an alpha value of (1–S). For example, if S is 1 then the point in the clipping area becomes transparent. If S is 0, the point in the clipping area is unchanged.

If the mask parameter is an image, then mask acts like an alpha mask and is blended with the current clipping area. The source samples of mask determine which points of the clipping area are changed. If the value of the source sample in mask is S, then the corresponding point in the current clipping area is multiplied by an alpha of S. For example, if S is 0, then the point in the clipping area becomes transparent. If S is 1, the point in the clipping area is unchanged.

Available in Mac OS X v10.4 and later.

54.6.27 clipToRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Clips the current path.
Notes: Intersect the current clipping path with 'rect'. Note that this function resets the context's path to the empty path.

54.6.28 Close

MBS MacCG Plugin, Plugin Version: 15.2, Platform: macOS, Targets: All.

Function: Closes the context.
Notes: Same as destructor later, but running now when you call method.

54.6.29 closePath

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Close the current subpath of the context's path.

54.6.30 ConcatCTM(transform as CGAffineTransformMBS)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Concatenate the current graphics state's transformation matrix (the CTM) with the affine transform 'transform'.

54.6.31 Constructor(g as graphics)

MBS MacCG Plugin, Plugin Version: 20.3, Platform: macOS, Targets: All.

Function: Creates a new CGContextMBS object drawing to the existing graphics object.
Example:

```
Dim p As New Picture(200, 200)
Dim g As Graphics = p.Graphics

// Clear image with white
g.ForeColor = & cFFFFFF
g.FillRect 0, 0, g.Width, g.Height

Dim c As New CGContextMBS(g)

c.SetRGBFillColor(1, 0, 0)

// coordinates are swapped in CGContext, so y = 20 means 20 pixels from bottom of picture!

Const x = 10
Const y = 20
Const w = 120
Const h = 100
```

```
c.FillRect New CGRectMBS(x, y, w, h)

Self.Backdrop = p
```

Notes:

Raises exception if we fail to get the CGContext from Xojo.
Works on macOS and iOS.
See also:

- 54.6.32 Constructor(handle as Integer) 10254
- 54.6.33 Constructor(pic as Picture) 10254

54.6.32 Constructor(handle as Integer)

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a new CGContextMBS object based on a CGContextRef.
Notes: The CGContext is retained.
See also:

- 54.6.31 Constructor(g as graphics) 10253
- 54.6.33 Constructor(pic as Picture) 10254

54.6.33 Constructor(pic as Picture)

MBS MacCG Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Creates a new CGContextMBS object drawing to the existing Picture object.
Example:

```
Dim p As New Picture(100,100)
Dim pg As New CGContextMBS(p)
break // inspect in debugger
```

Notes:

Raises exception, if the picture is not a bitmap picture.
Works on macOS and iOS.
See also:

- 54.6.31 Constructor(g as graphics) 10253

• 54.6.32 Constructor(handle as Integer) 10254

54.6.34 contextWithCGContext(handle as Integer) as CGContextMBS

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a new CGContextMBS object based on a CGContextRef.
Example:

```
// load a picture
dim f as FolderItem = SpecialFolder.Desktop.Child("ColorSpin.jpg")
dim pic as Picture = picture.Open(f)

// open printer
dim g as Graphics = OpenPrinterDialog
if g = nil then Return

// draw
g.DrawPicture pic, 0, 0

// now load again
dim ImageSource as new CGImageSourceMBS(f)
dim img as CGImageMBS = ImageSource.CreateImageAtIndex(0)
dim cs as CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB

// copy with replacing colorspace
img = img.CopyWithColorSpace(cs)

// and draw
# If XojoVersion >= 2019.02 Then
Dim p As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Dim c As CGContextMBS = CGContextMBS.contextWithCGContext(p)
# Else
Dim h As Integer = g.Handle(g.HandleTypeCGContextRef)
Dim c As CGContextMBS = CGContextMBS.contextWithCGContext(h)
# EndIf
dim r as CGRectMBS = CGMakeRectMBS(0, 0, img.Width, img.Height)

c.DrawPicture(img, r)
c.Flush
```

Notes:

The CGContext is retained.
Returns nil on any error.
See also:

• 54.6.35 contextWithCGContext(handle as Ptr) as CGContextMBS 10256

54.6.35 contextWithCGContext(handle as Ptr) as CGContextMBS

MBS MacCG Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a new CGContextMBS object based on a CGContextRef.
Example:

```
// load a picture
dim f as FolderItem = SpecialFolder.Desktop.Child("ColorSpin.jpg")
dim pic as Picture = picture.Open(f)

// open printer
dim g as Graphics = OpenPrinterDialog
if g = nil then Return

// draw
g.DrawPicture pic, 0, 0

// now load again
dim ImageSource as new CGImageSourceMBS(f)
dim img as CGImageMBS = ImageSource.CreateImageAtIndex(0)
dim cs as CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB

// copy with replacing colorspace
img = img.CopyWithColorSpace(cs)

// and draw
# If XojoVersion >= 2019.02 Then
Dim p As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Dim c As CGContextMBS = CGContextMBS.contextWithCGContext(p)
# Else
Dim h As Integer = g.Handle(g.HandleTypeCGContextRef)
Dim c As CGContextMBS = CGContextMBS.contextWithCGContext(h)
# EndIf
dim r as CGRectMBS = CGMakeRectMBS(0, 0, img.Width, img.Height)

c.DrawPicture(img, r)
c.Flush
```

Notes:

The CGContext is retained.
Returns nil on any error.
See also:

• 54.6.34 contextWithCGContext(handle as Integer) as CGContextMBS 10255

54.6.36 CopyPath as CGPathMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a Quartz path object built from the current path information in a graphics context.
Notes: Available in Mac OS X v10.6 and later.

54.6.37 DrawCGPDFDocument(pdf as Variant, rect as CGRectMBS, page as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draw 'page' in 'document' in the rectangular area specified by 'rect'.
Example:

```
'get a print session

// print this PDF
dim pathPrinted as FolderItem=GetFolderItem("test.pdf")

dim thePrintSession as CPMPrintSessionMBS = NewCPMPrintSessionMBS
if thePrintSession = nil then Return

'get default page format and print settings and attach it to the print settings
dim thePageFormat as CPMPageFormatMBS = NewCPMPageFormatMBS
dim thePrintSettings as CPMPrintSettingsMBS = NewCPMPrintSettingsMBS
thePrintSession.DefaultPageFormat thePageFormat
thePrintSession.DefaultPrintSettings thePrintSettings

'show the print dialog
if not thePrintSession.PrintDialog(thePrintSettings,thePageFormat) then return

'open the file which will be printed
dim thePdfDocument as CGPDFDocumentMBS = pathPrinted.OpenAsCGPDFDocumentMBS

' limit page counts to the one we have
dim LastPage as Integer = thePdfDocument.PageCount
if thePrintSettings.LastPage<lastpage then
lastpage=thePrintSettings.LastPage
end if

' you get better progress bar if you tell how many pages will come
thePrintSettings.LastPage=lastpage
```

```
'begin the printing
thePrintSession.BeginDocument(thePrintSettings, thePageFormat)

'loop over the number of copies
for currentCopy as Integer = 1 to thePrintSettings.Copies

'loop over the pages
for currentPage as Integer = thePrintSettings.FirstPage to LastPage

'prepage the page
dim PrintRect as CPMRectMBS =thePageFormat.AdjustedPageSize
dim CGRect as CGRectMBS =CGMakeRectMBS(PrintRect.left, PrintRect.top, PrintRect.Width, Print-
Rect.Height)
thePrintSession.BeginPage(thePageFormat, nil)
dim thePrintContext as CGContextMBS = thePrintSession.PageContext
if thePrintContext = Nil then return

'print the page
thePrintContext.DrawCGPDFDocument thePdfDocument, CGRect, currentPage

'end the page
thePrintContext = nil
thePrintSession.EndPage
next

next

'end the printing
thePrintSession.EndDocument
```

Notes:

Pass a CGPDFDocumentMBS object for the pdf argument.
The media box of the page is scaled, if necessary, to fit into 'rect'.

54.6.38 DrawLayerAtPoint(Point as CGPointMBS, layer as CGLayerMBS)

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Draws the contents of a CGLayer object at the specified point.
Notes:

context: The graphics context associated with the layer.
point: The location, in current user space coordinates, to use as the origin for the drawing.
layer: The layer whose contents you want to draw.

Calling the function DrawLayerAtPoint is equivalent to calling the function DrawLayerInRect with a rectangle that has its origin at point and its size equal to the size of the layer.

Available in Mac OS X version 10.4 and later.

54.6.39 DrawLayerInRect(rect as CGRectMBS, layer as CGLayerMBS)

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Draws the contents of a CGLayer object into the specified rectangle.
Notes:

context: The graphics context associated with the layer.
rect: The rectangle, in current user space coordinates, to draw to.
layer: The layer whose contents you want to draw.

The contents are scaled, if necessary, to fit into the rectangle.
Available in Mac OS X version 10.4 and later.

54.6.40 DrawLinearGradient(gradient as CGGradientMBS, startPoint as CGPointMBS, endPoint as CGPointMBS, options as Integer)

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Paints a gradient fill that varies along the line defined by the provided starting and ending points.
Notes:

gradient: A CGGradient object.
startPoint: The coordinate that defines the starting point of the gradient.
endPoint: The coordinate that defines the ending point of the gradient.
options: Option flags (kCGGradientDrawsBeforeStartLocation or kCGGradientDrawsAfterEndLocation) that control whether the fill is extended beyond the starting or ending point.

The color at location 0 in the CGGradient object is mapped to the starting point. The color at location 1 in the CGGradient object is mapped to the ending point. Colors are linearly interpolated between these two points based on the location values of the gradient. The option flags control whether the gradient is drawn before the start point or after the end point.

Available in Mac OS X v10.5 and later.

54.6.41 DrawPath(mode as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Draw the context's path using drawing mode 'mode'.

54.6.42 DrawPicture(pic as CGImageMBS, rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Draws a CGImageMBS at the given position.
Example:

```
// put inside window paint event

dim c as CGContextMBS
if TargetCocoa then
c = GetCurrentCGContextMBS
else
c = window1.CGContextMBS
end if

dim logo as Picture = logoMBS(500)
dim image as CGImageMBS = CGCreateImageMBS(logo)

dim r as CGRectMBS = CGMakeRectMBS(0,0,g.Width,g.Height)

c.DrawPicture image, r
```

Notes: Remeber that in CoreGraphics the position 0/0 is in the bottom left corner. In Xojo 0/0 is in the top left corner.

54.6.43 DrawRadialGradient(gradient as CGGradientMBS, startCenter as CGPointMBS, startRadius as Double, endCenter as CGPointMBS, endRadius as Double, options as Integer)

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Paints a gradient fill that varies along the area defined by the provided starting and ending circles.
Notes:

gradient: A CGGradient object.
startCenter: The coordinate that defines the center of the starting circle.

startRadius: The radius of the starting circle.
endCenter: The coordinate that defines the center of the ending circle.
endRadius: The radius of the ending circle.
options: Option flags (kCGGradientDrawsBeforeStartLocation or kCGGradientDrawsAfterEndLocation) that control whether the gradient is drawn before the starting circle or after the ending circle.

The color at location 0 in the CGGradient object is mapped to the circle defined by startCenter and startRadius. The color at location 1 in the CGGradient object is mapped to the circle defined by endCenter and endRadius. Colors are linearly interpolated between the starting and ending circles based on the location values of the gradient. The option flags control whether the gradient is drawn before the start point or after the end point.

Available in Mac OS X v10.5 and later.

54.6.44 DrawShading(shading as CGShadingMBS)

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Fills the clipping path of a context with the specified shading.
Notes:

shading: A Quartz shading. Quartz retains this object; upon return, you may safely release it.
Available in Mac OS X version 10.2 and later.

54.6.45 DrawTiledImage(pic as CGImageMBS, rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Repeatedly draws an image, scaled to the provided rectangle, to fill the current clip region.
Example:

```
// put inside window paint event

dim c as CGContextMBS
if TargetCocoa then
c = GetCurrentCGContextMBS
else
c = window1.CGContextMBS
end if

dim logo as Picture = logoMBS(50)
dim image as CGImageMBS = CGCreateImageMBS(logo)

dim r as CGRectMBS = CGMakeRectMBS(0,0,50,50)
```

c.DrawTiledImage image, r

Notes:

rect: A rectangle that specifies the origin and size of the destination tile. Quartz scales the image—disproportionately, if necessary—to fit the bounds specified by the rect parameter.

image: The image to draw.

Quartz draws the scaled image starting at the origin of the rectangle in user space, then moves to a new point (horizontally by the width of the tile and/or vertically by the height of the tile), draws the scaled image, moves again, draws again, and so on, until the current clip region is tiled with copies of the image. Unlike patterns, the image is tiled in user space, so transformations applied to the CTM affect the final result.

Available in Mac OS X v10.5 and later.

54.6.46 EndPage

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: End the current page.

54.6.47 EndTransparencyLayer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: End a tranparency layer.

54.6.48 EOClip

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Clips the current path.
Notes: Intersect the context's path with the current clip path and use the resulting path as the clip path for subsequent rendering operations. Use the even-odd fill rule for deciding what's inside the path.

54.6.49 EOFillPath

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Fill the context's path using the even-odd fill rule. Any open subpath of the path is implicitly closed.

54.6.50 FillEllipseInRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Fill an ellipse (an oval) inside rect.
Example:

```
// a new picture in RB
dim pic as new Picture(500, 500)

// and create CGBitmapContextMBS pointing to it
dim b as CGBitmapContextMBS = CGBitmapContextMBS.CreateWithPicture(pic)

// color set to full red
b.SetRGBFillColor 1.0, 0.0, 0.0, 1.0

// draw ellipse
dim r as CGRectMBS = CGRectMBS.Make(0, 0, 500, 500)
b.FillEllipseInRect r

// flush drawings
b.Flush

// and show
Backdrop = pic
```

Notes: Requires Mac OS X 10.4.

54.6.51 FillPath

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Fill the context's path using the winding-number fill rule. Any open subpath of the path is implicitly closed.

54.6.52 FillRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Fills the background with current fill color.
Example:

```
// put in window.paint event
dim c as CGContextMBS

c=window1.CGContextMBS

c.RotateCTM 0.1
c.SetRGBFillColor 0,0,1,0.5
c.FillRect CGMakeRectMBS(0,0,100,100)

c.Flush
```

Notes: Remeber that in CoreGraphics the position 0/0 is in the bottom left corner. In Xojo 0/0 is in the top left corner.

54.6.53 fillRoundedRect(x as Double, y as Double, w as Double, h as Double, arcWidth as Double, arcHeight as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Fills a round rectangle.
Example:

```
dim c as CGContextMBS

c=window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.fillRoundedRect 100,100,100,100,20,20

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.strokeRoundedRect 100,100,100,100,20,20
```

54.6.54 Flush

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Updates the screen to show the current content.
Notes: Like UpdateNow in the RB window class.

54.6.55 frameArc(x as Double, y as Double, w as Double, h as Double, startAngle as Integer, arcAngle as Integer)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Draws an arc.
Example:

```
dim c as CGContextMBS

c=window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintArc 100,100,100,100,50,90

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameArc 100,100,100,100,50,90
```

Notes: angles are in degree.

54.6.56 frameOval(x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Draws an oval.
Example:

```
dim c as CGContextMBS

c=window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintOval 100,100,100,100
```

```
// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameOval 100,100,100,100
```

54.6.57 frameRect(x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Draws the frame for the rectangle.
Example:

```
dim c as CGContextMBS

c=window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintRect 100,100,100,100

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameRect 100,100,100,100
```

54.6.58 GetClipBoundingBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns the bounding box of a clipping path.
Notes:

Returns the bounding box of the clipping path, specified in user space.

The bounding box is the smallest rectangle completely enclosing all points in the clipping path, including control points for any Bezier curves in the path.

Available in Mac OS X v10.3 and later.

54.6.59 GetCTM as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Return the current graphics state's transformation matrix.
Notes: Returns nil on any error.

54.6.60 GetPathBoundingBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Return the bounding box of the context's path.
Notes: The bounding box is the smallest rectangle completely enclosing all points in the path, including control points for Bezier and quadratic curves.

54.6.61 GetPathCurrentPoint as CGPointMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Return the current point of the current subpath of the context's path.

54.6.62 GetTextPosition as CGPointMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Return the current user-space point at which text will be drawn to (x,y).
Notes: Returns nil on any problem.

54.6.63 IsPathEmpty as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns true if the context's path contains no elements.

54.6.64 MoveToPoint(x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Append a straight line segment from the current point to (x, y).

54.6.65 paintArc(x as Double, y as Double, w as Double, h as Double, startAngle as Integer, arcAngle as Integer)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Fills an arc.
Example:

```
dim c as CGContextMBS

c=window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintArc 100,100,100,100,50,90

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameArc 100,100,100,100,50,90
```

Notes: angles are in degree.

54.6.66 paintOval(x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Fills an oval.
Example:

```
dim c as CGContextMBS

c=window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintOval 100,100,100,100

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameOval 100,100,100,100
```

54.6.67 paintRect(x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Fills the rectangle.
Example:

```
dim c as CGContextMBS

c=window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.paintRect 100,100,100,100

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.frameRect 100,100,100,100
```

54.6.68 PathContainsPoint(point as CGPointMBS, mode as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return true if point is contained in the current path of context.
Notes:

A point is contained within a contexts path if it is inside the painted region when the path is stroked or filled with opaque colors using the path drawing mode mode. point is specified is user space.

Requires Mac OS X 10.4.

54.6.69 ReplacePathWithStrokedPath

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Replace the path in context with the stroked version of the path, using the parameters of context to calculate the stroked path.
Notes:

The resulting path is created such that filling it with the appropriate color will produce the same results as stroking the original path. You can use this path in the same way you can use the path of any context; for example, you can clip to the stroked version of a path by calling this function followed by a call to "ClipPath".
Requires Mac OS X 10.4.

54.6.70 RestoreGState

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Restores the last saved graphics state.

54.6.71 RotateCTM(angle as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Rotate the current graphics state's transformation matrix (the CTM) by 'angle' radians.
Example:

```
// Rotate a picture not on the edge of the context:

dim c as CGImageMBS
dim f as FolderItem
dim d as CGDataProviderMBS
dim cg as CGContextMBS
dim r as CGRectMBS

f=SpecialFolder.Desktop.Child("IMAG0001.JPG")

d=CGDataProviderMBS.CreateWithFile(f)
c=CGCreateImageFromJPEGDataProviderMBS(d,nil,true,0)

cg=window1.CGContextMBS

r=CGMakeRectMBS(-c.Width/2,-c.Height/2,c.Width,c.Height)
cg.TranslateCTM Width/2,Height/2
cg.RotateCTM Slider1.Value/180.0*3.14
cg.DrawPicture c,r

cg.Flush
```

54.6.72 SaveGState

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Saves the current graphics state.

54.6.73 ScaleCTM(sx as Double, sy as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Scale the current graphics state's transformation matrix (the CTM) by (sx, sy).

54.6.74 SelectFont(name as string, size as Double, fontencoding as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Attempts to find the font named 'name'. If successful, scales it to 'size' units in user space.
Notes:

Name: string that contains the PostScript name of the font to set.

'textEncoding' specifies how to translate from bytes to glyphs.

kCGEncodingFontSpecific	0
kCGEncodingMacRoman	1

As "Comic Sans MS" works, but not ""Comic Sans ms" this functions seems to be case sensitive.

Matthias Buercher notes that sometimes a font is not selected if the RGBFillColor was not set before.

You may need to reset the textmatrix with some code like c.TextMatrix = CGAffineTransformMBS.Identity. If the text matrix is different, your text may be rotated, skewed or resized.

54.6.75 SetAllowsAntialiasing(allowsAntialiasing as boolean)

MBS MacCG Plugin, Plugin Version: 7.2, Platform: macOS, Targets: All.

Function: Whether to allow antialiasing.
Notes:

Allow antialiasing in context if allowsAntialiasing is true; don't allow it otherwise. This parameter is not part of the graphics state. A context will perform antialiasing if both allowsAntialiasing and the graphics state parameter shouldAntialias are true.
Requires Mac OS X 10.4 to work.

54.6.76 SetAlpha(alpha as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the alpha value in the current graphics state to alpha.

54.6.77 SetBlendMode(BlendMode as Integer)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Set the blend mode of context to mode.
Notes: Requires Mac OS X 10.4.

54.6.78 SetCharacterSpacing(spacing as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the current character spacing to 'spacing'.
Notes: The character spacing is added to the displacement between the origin of one character and the origin of the next.

54.6.79 SetCMYKFillColor(cyan as Double, magenta as Double, yellow as Double, black as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the fill color to a CMYK color.
Notes: colors are from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

54.6.80 SetCMYKStrokeColor(cyan as Double, magenta as Double, yellow as Double, black as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the stroke color to a CMYK color.
Notes: colors are from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

54.6.81 SetFillColor(color as CGColorMBS)

MBS MacCG Plugin, Plugin Version: 17.2, Platform: macOS, Targets: All.

Function: Sets the given color as fill color.

54.6.82 SetFillColorSpace(colorspace as CGColorSpaceMBS)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Sets the colorspace used for the fill color of the graphics context.

54.6.83 SetFlatness(flatness as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the path flatness parameter in the current graphics state to flatness.

54.6.84 SetFont(font as CGFontMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Sets the current font.

54.6.85 SetFontSize(size as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the current font size to 'size'.

54.6.86 SetGrayFillColor(gray as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the fill color to a gray color.
Notes: gray is from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

54.6.87 SetGrayStrokeColor(gray as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the stroke color to a gray color.
Notes: gray is from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

54.6.88 SetLineCap(cap as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the line cap in the current graphics state to cap.

54.6.89 SetLineDash(phase as Double, lengths as memoryblock, count as Integer)

MBS MacCG Plugin, Plugin Version: 7.7, Platform: macOS, Targets: All.

Function: Sets the pattern for dashed lines in a graphics context.
Notes:

phase:
A value that specifies how far into the dash pattern the line starts, in units of the user space. For example, passing a value of 3 means the line is drawn with the dash pattern starting at three units from its beginning. Passing a value of 0 draws a line starting with the beginning of a dash pattern.

lengths:
A memoryblock of float values that specify the lengths of the painted segments and unpainted segments, respectively, of the dash pattern—or nil for no dash pattern.

For example, passing a memoryblock with the values [2,3] sets a dash pattern that alternates between a 2-user-space-unit-long painted segment and a 3-user-space-unit-long unpainted segment. Passing the values [1,3,4,2] sets the pattern to a 1-unit painted segment, a 3-unit unpainted segment, a 4-unit painted segment, and a 2-unit unpainted segment.

count
If the lengths parameter specifies a memorybloc, pass the number of elements in the memoryblock. Otherwise, pass 0.

54.6.90 SetLineJoin(join as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the line join in the current graphics state to join.

54.6.91 SetLineWidth(width as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the line width in the current graphics state to width.
Example:

```
# If XojoVersion >= 2019.02 Then
Dim p As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Dim c As CGContextMBS = CGContextMBS.contextWithCGContext(p)
# Else
Dim h As Integer = g.Handle(g.HandleTypeCGContextRef)
Dim c As CGContextMBS = CGContextMBS.contextWithCGContext(h)
# EndIf

c.SetGrayStrokeColor(0,1)
c.SetGrayFillColor(0,1)
c.BeginPath
c.SetLineWidth 0.5
c.MoveToPoint 50, 550
c.AddLineToPoint 100, 600
c.StrokePath
c.Flush
c = nil
```

54.6.92 SetMiterLimit(limit as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the miter limit in the current graphics state to limit.

54.6.93 SetRenderingIntent(intent as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the rendering intent in the graphics state to 'intent'.
Notes:

Possible values for intent:

kCGRenderingIntentDefault	0
kCGRenderingIntentAbsoluteColorimetric	1
kCGRenderingIntentRelativeColorimetric	2
kCGRenderingIntentPerceptual	3
kCGRenderingIntentSaturation	4

54.6.94 SetRGBFillColor(red as Double, green as Double, blue as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the fill color to a RGB color.
Notes: colors are from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

54.6.95 SetRGBStrokeColor(red as Double, green as Double, blue as Double, alpha as Double = 1.0)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Sets the stroke color to a RGB color.
Notes: colors are from 0 to 1 and alpha is from 0 (transparent) to 1 (solid).

54.6.96 SetShadow(x as Double, y as Double, blur as Double)

MBS MacCG Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Enables shadowing in a graphics context.
Example:

```
Sub Paint(g As Graphics)
dim c as CGContextMBS

c=window1.CGContextMBS

c.SetShadow 5,5,0.5
c.SetRGBFillColor 1,0,0,1
c.FillRect CGMakeRectMBS(100,100,100,100)
c.Flush

End Sub
```

Notes:

x/y: Specifies a translation of the context's coordinate system, to establish an offset for the shadow ({ 0,0 } specifies a light source immediately above the screen).
blur: A non-negative number specifying the amount of blur.

Shadow parameters are part of the graphics state in a context. After shadowing is set, all objects drawn are shadowed using a black color with 1/3 alpha (i.e., RGBA = { 0, 0, 0, 1.0/3.0 }) in the DeviceRGB color space.

To turn off shadowing:

- Use the standard save/restore mechanism for the graphics state.
- Use CGContextSetShadowWithColor to set the shadow color to a fully transparent color (or pass nil as the color).

54.6.97 SetShadowWithColor(x as Double, y as Double, blur as Double, colorvalue as CGColorMBS)

MBS MacCG Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Enables shadowing with color a graphics context.
Notes:

x/y: Specifies a translation in base-space.
blur: A non-negative number specifying the amount of blur.
colorvalue: Specifies the color of the shadow, which may contain a non-opaque alpha value. If nil, then shadowing is disabled.

See also SetShadow.

54.6.98 SetShouldAntialias(shouldAntialias as boolean)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Turn off antialiasing if 'shouldAntialias' is zero; turn it on otherwise.
Notes: This parameter is part of the graphics state.

54.6.99 SetShouldSmoothFonts(shouldSmoothFonts as boolean)

MBS MacCG Plugin, Plugin Version: 7.2, Platform: macOS, Targets: All.

Function: Whether font smoothing is enabled.
Notes:

Turn on font smoothing if shouldSmoothFonts is true; turn it off otherwise. This parameter is part of the graphics state. Note that this doesn't guarantee that font smoothing will occur: not all destination contexts support font smoothing.
Requires Mac OS X 10.2.

54.6.100 SetStrokeColor(color as CGColorMBS)

MBS MacCG Plugin, Plugin Version: 17.2, Platform: macOS, Targets: All.

Function: Sets the given color as stroke color.

54.6.101 SetStrokeColorSpace(colorspace as CGColorSpaceMBS)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Sets the colorspace used for the stroke color of the graphics context.

54.6.102 SetTextDrawingMode(mode as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Set the text drawing mode to 'mode'.
Notes:

Possible values:

kCGTextFill	0
kCGTextStroke	1
kCGTextFillStroke	2
kCGTextInvisible	3
kCGTextFillClip	4
kCGTextStrokeClip	5
kCGTextFillStrokeClip	6
kCGTextClip	7

54.6.103 ShowText(text as string)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Draw 'string' at the point specified by the current text matrix.
Notes:

Each byte of the string is mapped through the encoding vector of the current font to obtain the glyph to display.
This function is more for quick and dirty text output, but not for serious drawing as it does not do most unicode strings correctly. Use ATS for better drawing.

Some RB 5.x versions show a bug that the text is not displayed on a CGContext in while running the application in debug mode.

54.6.104 ShowTextAtPoint(text as string, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Draw 'string' at the point '(x, y)', specified in user space.
Notes:

Each byte of the string is mapped through the encoding vector of the current font to obtain the glyph to display.
This function is more for quick and dirty text output, but not for serious drawing as it does not do most unicode strings correctly. Use ATS for better drawing.

Some RB 5.x versions show a bug that the text is not displayed on a CGContext in while running the application in debug mode.

54.6.105 StrokeEllipseInRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Stroke an ellipse (an oval) inside rect.
Notes: Requires Mac OS X 10.4.

54.6.106 StrokePath

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Stroke the context's path.
Example:

```
dim c as CGContextMBS

c=window1.CGContextMBS

c.SetRGBStrokeColor 1,0,0,1
c.BeginPath
c.MoveToPoint 0,0
c.AddLineToPoint 100,100
c.StrokePath
c.Flush
```

54.6.107 StrokeRect(rect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Stroke 'rect' with the current stroke color and the current linewidth.

54.6.108 StrokeRectWithWidth(rect as CGRectMBS, width as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Stroke 'rect' with the current stroke color, using 'width' as the the line width.

54.6.109 strokeRoundedRect(x as Double, y as Double, w as Double, h as Double, arcWidth as Double, arcHeight as Double)

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Draws the frame for the round rectangle.
Example:

```
dim c as CGContextMBS

c=window1.CGContextMBS

// fill in red
c.SetRGBFillColor 1,0,0,1
c.fillRoundedRect 100,100,100,100,20,20

// draw in green
c.SetRGBStrokeColor 0,1,0,1
c.strokeRoundedRect 100,100,100,100,20,20
```

54.6.110 Synchronize

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Synchronizes the context with the device.

54.6.111 TranslateCTM(tx as Double, ty as Double)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Translate the current graphics state's transformation matrix (the CTM) by (tx,ty).
Example:

```
// Rotate a PDF page

// our files
dim sourcefile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim destfile as FolderItem = SpecialFolder.Desktop.Child("rotated.pdf")

// open PDF
dim pdf as CGPDFDocumentMBS = sourcefile.OpenAsCGPDFDocumentMBS

// query media size of first page
dim r as CGRectMBS = pdf.MediaBox(1)

// create new PDF
dim c as CGContextMBS = destfile.NewCGPDFDocumentMBS(r,"title","Author","Creator")

// create rotated rectangle
dim nr as new CGRectMBS(0,0,r.Height,r.Width)

// create new page
c.BeginPage nr
c.SaveGState

const pi = 3.14159265

// rotate by 90°
c.RotateCTM pi*1.5

// fix origin
c.TranslateCTM -r.width,0

// draw PDF
c.DrawCGPDFDocument pdf,r,1

// cleanup
c.RestoreGState
c.EndPage

c = nil

// show in PDF viewer
destfile.Launch
```

54.6.112 Properties

54.6.113 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The handle for this context.
Notes:

Handle is a CGContextRef.
(Read and Write property)

54.6.114 InterpolationQuality as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The interpolation quality for image rendering of this context.
Notes:

The interpolation quality is a gstate-parameter which controls the level of interpolation performed when an image is interpolated (for example, when scaling the image). Note that it is merely a hint to the context: not all contexts support all interpolation quality levels.

Possible values:

kCGInterpolationDefault	0	Let the context decide.
kCGInterpolationNone	1	Never interpolate.
kCGInterpolationLow	2	Fast, low quality.
kCGInterpolationHigh	3	Slow, high quality.

(Read and Write property)

54.6.115 RetainCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the reference counter of the object.
Notes:

If the retain count falls below 1, the object is destroyed.
(Read only property)

54.6.116 TextMatrix as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: Return the text matrix.
Notes:

Returns nil on any error.
(Read and Write computed property)

54.6.117 TextPosition as CGPointMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: User-space point at which text will be drawn to (x,y).
Notes: (Read and Write computed property)

54.6.118 Constants

54.6.119 kCGBlendModeClear=16

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = 0
Available in Mac OS X v10.5 and later.

54.6.120 kCGBlendModeColor=14

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.121 kCGBlendModeColorBurn=7

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.122 kCGBlendModeColorDodge=6

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.123 kCGBlendModeCopy=17

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = S
Available in Mac OS X v10.5 and later.

54.6.124 kCGBlendModeDarken=4

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.125 kCGBlendModeDestinationAtop=24

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = S*(1 - Da) + D*Sa
Available in Mac OS X v10.5 and later.

54.6.126 kCGBlendModeDestinationIn=22

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = D*Sa
Available in Mac OS X v10.5 and later.

54.6.127 kCGBlendModeDestinationOut=23

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = D*(1 - Sa)
Available in Mac OS X v10.5 and later.

54.6.128 kCGBlendModeDestinationOver=21

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = S*(1 - Da) + D
Available in Mac OS X v10.5 and later.

54.6.129 kCGBlendModeDifference=10

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.130 kCGBlendModeExclusion=11

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.131 kCGBlendModeHardLight=9

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.132 kCGBlendModeHue=12

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.133 kCGBlendModeLighten=5

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.134 kCGBlendModeLuminosity=15

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.135 kCGBlendModeMultiply=1

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.136 kCGBlendModeNormal=0

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.137 kCGBlendModeOverlay=3

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.138 kCGBlendModePlusDarker=26

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = MAX(0, (1 - D) + (1 - S))
Available in Mac OS X v10.5 and later.

54.6.139 kCGBlendModePlusLighter=27

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = MIN(1, S + D)
Available in Mac OS X v10.5 and later.

54.6.140 kCGBlendModeSaturation=13

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.141 kCGBlendModeScreen=2

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.142 kCGBlendModeSoftLight=8

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Blend modes.

54.6.143 kCGBlendModeSourceAtop=20

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = S*Da + D*(1 - Sa)
Available in Mac OS X v10.5 and later.

54.6.144 kCGBlendModeSourceIn=18

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = S*Da
Available in Mac OS X v10.5 and later.

54.6.145 kCGBlendModeSourceOut=19

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = S*(1 - Da)
Available in Mac OS X v10.5 and later.

54.6.146 kCGBlendModeXOR=25

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Blend modes.
Notes:

R = S*(1 - Da) + D*(1 - Sa). This XOR mode is only nominally related to the classical bitmap XOR operation, which is not supported by Quartz 2D.
Available in Mac OS X v10.5 and later.

54.6.147 kCGEncodingFontSpecific=0

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Text encodings.

54.6.148 kCGEncodingMacRoman=1

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Text encodings.

54.6.149 kCGInterpolationDefault=0

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Interpolation quality.
Notes: Let the context decide.

54.6.150 kCGInterpolationHigh=3

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Interpolation quality.
Notes: Slower, higher quality.

54.6.151 kCGInterpolationLow=2

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Interpolation quality.
Notes: Faster, lower quality.

54.6.152 kCGInterpolationMedium=4

MBS MacCG Plugin, Plugin Version: 11.2.

Function: A constant for the Interpolation quality.
Notes:

A medium level of interpolation quality. This setting is slower than the low setting but faster than the high setting.
Available in Mac OS X v10.6 and later.

54.6.153 kCGInterpolationNone=1

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Interpolation quality.
Notes: Never interpolate.

54.6.154 kCGLineCapButt=0

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Line cap styles.

54.6.155 kCGLineCapRound=1

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Line cap styles.

54.6.156 kCGLineCapSquare=2

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Line cap styles.

54.6.157 kCGLineJoinBevel=2

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Line join styles.

54.6.158 kCGLineJoinMiter=0

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Line join styles.

54.6.159 kCGLineJoinRound=1

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Line join styles.

54.6.160 kCGPathEOFill=1

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for paths.

54.6.161 kCGPathEOFillStroke=4

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for paths.

54.6.162 kCGPathFill=0

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for paths.

54.6.163 kCGPathFillStroke=3

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for paths.

54.6.164 kCGPathStroke=2

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for paths.

54.6.165 kCGTextClip=7

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for text.

54.6.166 kCGTextFill=0

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for text.

54.6.167 kCGTextFillClip=4

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for text.

54.6.168 kCGTextFillStroke=2

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for text.

54.6.169 kCGTextFillStrokeClip=6

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for text.

54.6.170 kCGTextInvisible=3

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for text.

54.6.171 kCGTextStroke=1

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for text.

54.6.172 kCGTextStrokeClip=5

MBS MacCG Plugin, Plugin Version: 8.0.

Function: A constant for the Drawing modes for text.

54.7 class CGDataConsumerMBS

54.7.1 class CGDataConsumerMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: A class for CoreGraphics to write data.

54.7.2 Methods

54.7.3 Constructor

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new event based data consumer.
Notes: On failure the handle property is zero.
See also:

- 54.7.4 Constructor(file as folderitem) 10295
- 54.7.5 Constructor(url as string) 10295

54.7.4 Constructor(file as folderitem)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGDataConsumer to write data to the given file.
Notes: On failure the handle property is zero.
See also:

- 54.7.3 Constructor 10295
- 54.7.5 Constructor(url as string) 10295

54.7.5 Constructor(url as string)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGDataConsumer to write data to the given url.
Notes: On failure the handle property is zero.
See also:

- 54.7.3 Constructor 10295
- 54.7.4 Constructor(file as folderitem) 10295

54.7.6 CreateWithFile(file as folderitem) as CGDataConsumerMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGDataConsumer to write data to the given file.
Notes: Returns nil on any error.

54.7.7 CreateWithURL(url as string) as CGDataConsumerMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGDataConsumer to write data to the given url.
Notes: Returns nil on any error.

54.7.8 Properties

54.7.9 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

Function: The hande to the CGDataConsumer object.
Notes:

Data is a CGDataConsumerRef.
(Read and Write property)

54.7.10 Events

54.7.11 CloseConsumer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: .

Function: Event called when the consumer is no longer needed.

54.7.12 Put(data as string) as Integer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: .

Function: Some data needs to be stored.
Notes: Write the given data string into your backbuffer or file and return the number of bytes written.

Return 0 if you can't accept new input.

54.8 class CGDataProviderMBS

54.8.1 class CGDataProviderMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a Coregraphics data provider.
Notes: Something like a textinputstream in RB, but for Coregraphics this stream provides binary data.

54.8.2 Methods

54.8.3 Constructor(data as string)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new data provider reading data from the given string.
Notes:

On failure the handle property is zero.
Available in Mac OS X v10.4 and later.
See also:

- 54.8.4 Constructor(file as folderitem) 10298

54.8.4 Constructor(file as folderitem)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a data provider using a CFUrl.
Notes: On failure the handle property is zero.
See also:

- 54.8.3 Constructor(data as string) 10298

54.8.5 CreateWithData(data as string) as CGDataProviderMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new data provider reading data from the given string.
Notes:

On failure the handle property is zero.
Available in Mac OS X v10.4 and later.

54.8.6 CreateWithFile(file as folderitem) as CGDataProviderMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a data provider using a file.
Notes: Returns nil on any error.

54.8.7 CreateWithURL(url as string) as CGDataProviderMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a data provider using an URL.
Notes: Returns nil on any error.

54.8.8 Data as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns a copy of the provider's data.
Notes: Available in Mac OS X v10.5 and later.

54.8.9 Properties

54.8.10 Handle as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The handle to CGDataProvider object.
Notes:

(a CGDataProviderRef)
(Read and Write property)

54.9 class CGDisplayConfigMBS

54.9.1 class CGDisplayConfigMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The class for a display configuration.
Notes:

The display reconfiguration process:

- Make all desired changes for all displays.
- Commit the changes using Complete(), or cancel with Cancel().

The resulting layout will be adjusted to remove gaps or overlaps from the requested layout, if needed. */

54.9.4 Methods

54.9.5 Cancel

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Cancel a set of display configuration changes.
Notes:

On return, the configuration is cancelled and is no longer valid.
Calls CGCancelDisplayConfiguration.

54.9.6 Complete(options as Integer)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Complete a set of display configuration changes.
Notes:

On return, the configuration is no longer valid.

A configuration change can apply for the life of an application, the life of a login session, or permanently. If a request is made to make a change permanent, and the change cannot be supported by Mac OS X user interface, then the configuration change lasts only for the current login session.

A permanent configuration change also becomes the current session's configuration.
When the system reverts configurations at app termination, the configuration reverts to the session or permanent configuration setting.
When the system reverts configurations at session termination, the configuration reverts to the permanent configuration setting.
This operation may fail if an unsupported display mode is requested, or if another app is running in full-screen mode.

Calls CGCompleteDisplayConfiguration.

54.9.7 DisplayMode(display as CGDisplayMBS, mode as CGDisplayModeMBS)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Configure the display mode of a display.
Notes:

A display mode is a set of properties such as width, height, pixel depth, and refresh rate, and options such as stretched LCD panel filling.

If you use this function to change the mode of a display in a mirroring set, Quartz may adjust the bounds, resolutions, and depth of the other displays in the set to a safe mode, with matching depth and the smallest enclosing size.

Calls CGConfigureDisplayWithDisplayMode.

54.9.8 MirrorOfDisplay(display as CGDisplayMBS, master as CGDisplayMBS)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Make a display a mirror of a master display.
Notes:

Pass nil for the master display to disable mirroring.
Pass MainDisplay for the master display to mirror the main display.

Display mirroring and display matte generation are implemented either in hardware (preferred) or software, at the discretion of the device driver.

- Hardware mirroring

With hardware mirroring enabled, all drawing is directed to the primary
display — see PrimaryDisplay.

If the device driver selects hardware matte generation, the display bounds and rowbytes values are adjusted to reflect the active drawable area.

- Software mirroring

In this form of mirroring, identical content is drawn into each display in the mirroring set. Applications that use the window system need not be concerned about mirroring, as the window system takes care of all flushing of window content to the appropriate displays.

Applications that draw directly to the display, as with display capture, must make sure to draw the same content to all mirrored displays in a software mirror set. When drawing to software mirrored displays using a full screen OpenGL context (not drawing through a window), you should create shared OpenGL contexts for each display and re-render for each display.

You can use the function GetActiveDisplayList to determine which displays are active, or drawable. This automatically gives your application the correct view of the current displays.

Calls CGConfigureDisplayMirrorOfDisplay.

54.9.9 Mode(display as CGDisplayMBS, mode as Dictionary)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Sets the mode given the values in the dictionary.
Notes:

Deprecated with Mac OS X 10.6.
Calls CGConfigureDisplayMode.

54.9.10 Origin(display as CGDisplayMBS, x as Integer, y as Integer)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Configure the origin of a display in global display coordinates.
Notes:

The new origin of the display is placed as close as possible to the requested location, without overlapping or leaving a gap between displays.

Any display whose origin is not explicitly set in a reconfiguration will be repositioned to a location as close as possible to its current location without overlapping or leaving a gap between displays.

Note that setting the origin of a display which is mirroring another display will remove that display from any mirroring set.

Calls CGConfigureDisplayOrigin.

54.9.11 RestorePermanentDisplayConfiguration

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Restore the permanent display configuration settings for the current user.
Notes: Calls CGRestorePermanentDisplayConfiguration.

54.9.12 StereoOperation(display as CGDisplayMBS, stereo as Boolean, forceBlueLine as Boolean)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Enable or disable stereo operation for a display.
Notes:

Note that the system normally detects the presence of a stereo window, and will automatically switch a display containing a stereo window to stereo operation. This function provides a mechanism to force a display to stereo operation, and to set options (such as blue line sync signal) when in stereo operation.

When in stereo operation, a display may need to generate a special stereo sync signal as part of the video output. The sync signal consists of a blue line which occupies the first 25% of the last scanline for the left eye view, and the first 75% of the last scanline for the right eye view. The remainder of the scanline is black.

To force the display to generate this sync signal, pass true for forceBlueLine; otherwise, pass false.

Returns kCGErrorSuccess on success, or kCGErrorRangeCheck if the display does not support the stereo operation settings requested.

On success, the display resolution, mirroring mode, and available display modes may change due to hardware-specific capabilities and limitations. You should check these settings to verify that they are appropriate for your application.

Calls CGConfigureDisplayStereoOperation.

54.9.13 Properties

54.9.14 Handle as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

54.9.15 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The last error value.
Notes: (Read only property)

54.9.16 Constants

54.9.17 kCGConfigureForAppOnly = 0

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the option constants for Complete method.
Notes: For application only.

54.9.18 kCGConfigureForSession = 1

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the option constants for Complete method.
Notes: For session only.

54.9.19 kCGConfigurePermanently = 2

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the option constants for Complete method.
Notes: Permanently.

54.10 class CGDisplayMBS

54.10.1 class CGDisplayMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: A class for a CoreGraphics Display object.
Example:

```
dim c as new CGDisplayMBS
dim lines(-1) as string

dim DPIWidth as Double = c.PixelsWide/(c.ScreenSizeWidth/10.0/2.54)
dim DPIHeight as Double = c.PixelsHigh/(c.ScreenSizeHeight/10.0/2.54)

lines.append str(c.ScreenSizeWidth)+" x "+str(c.ScreenSizeHeight)+" Millimeter with"
lines.Append str(c.PixelsWide)+" x "+str(c.PixelsHigh)+" Pixel is"
lines.Append str(DPIWidth)+" x "+str(DPIHeight)+" DPI"

MsgBox Join(lines,EndOfLine)
```

54.10.4 Methods

54.10.5 AllDisplayModes(Options as Dictionary = nil) as CGDisplayModeMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return an array of all modes for the specified display.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay

Dim options As New Dictionary
options.Value(CGDisplayMBS.kCGDisplayShowDuplicateLowResolutionModes) = false

dim modes(-1) as string
for each mode as CGDisplayModeMBS in d.AllDisplayModes(options)
modes.append str(mode.Width)+" x "+str(mode.Height)
next
MsgBox Join(modes,EndOfLine)
```

Notes:

Returns an empty array on any error.
Requires Mac OS X 10.6

54.10.6 AvailableModes as Dictionary()

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns an array filled with dictionaries (one for each mode).
Example:

```
// Display all available graphic modes:

Listbox1.DeleteAllRows
Listbox1.ColumnCount = 4

dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay

dim a(-1) as Dictionary = d.AvailableModes

for each di as Dictionary in a

Listbox1.AddRow di.Value(d.kCGDisplayMode).stringValue
Listbox1.cell(Listbox1.LastIndex,1) = di.Value(d.kCGDisplayWidth)+" x "+di.Value(d.kCGDisplayHeight)
Listbox1.cell(Listbox1.LastIndex,2) = di.Value(d.kCGDisplayRefreshRate)
Listbox1.cell(Listbox1.LastIndex,3) = di.Value(d.kCGDisplayBitsPerPixel)

next
```

Notes: Returns empty error on any error.

54.10.7 BestModeForParameters(BitsPerPixel as Integer, Width as Integer, Height as Integer, byref ExactMatch as boolean) as Dictionary

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns a Dictionary with the best mode found for the given parameters.
Notes:

Returns nil on any error.

Try to find a display mode of specified depth with dimensions equal or greater than specified.
If no depth match is found, try for the next larger depth with dimensions equal or greater than specified. If no luck, then just return the current mode.

exactmatch is set to 'true' if an exact match in width, height, and depth is found, and 'false' otherwise.
Returns nil if display is invalid.

54.10.8 BestModeForParametersAndRefreshRate(BitsPerPixel as Integer, Width as Integer, Height as Integer, RefreshRate as Integer, byref ExactMatch as boolean) as Dictionary

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns a Dictionary with the best mode found for the given parameters.
Notes:

Returns nil on any error.

Try to find a display mode of specified depth with dimensions equal or greater than specified.
If no depth match is found, try for the next larger depth with dimensions equal or greater than specified. If no luck, then just return the current mode.

exactmatch is set to 'true' if an exact match in width, height, and depth is found, and 'false' otherwise.
Returns nil if display is invalid.

54.10.9 BestModeForParametersAndRefreshRateWithProperty(BitsPerPixel as Integer, Width as Integer, Height as Integer, RefreshRate as Integer, propertyName as string, byref ExactMatch as boolean) as Dictionary

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns a Dictionary with the best mode found for the given parameters.
Notes:

Returns nil on any error.

Try to find a display mode of specified depth with dimensions equal or greater than specified.
If no depth match is found, try for the next larger depth with dimensions equal or greater than specified. If no luck, then just return the current mode.

exactmatch is set to 'true' if an exact match in width, height, and depth is found, and 'false' otherwise.
Returns nil if display is invalid.

54.10.10 Capture as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Captures this display for your use.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.Capture = 0 then

dim c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.Release
else
MsgBox "Failed to capture displays."
end if
```

Notes:

Don't forget to Release the display later.
Returns an error code.

54.10.11 CaptureAllDisplays as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Capture all displays.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.CaptureAllDisplays = 0 then

dim c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.ReleaseAllDisplays
else
MsgBox "Failed to capture displays."
end if
```

Notes:

This has the nice effect of providing an immersive environment, and preventing other apps from trying to adjust themselves to display changes only needed by your app.

Returns an error code.

54.10.12 CaptureAllDisplaysWithOptions(options as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Capture all displays.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.CaptureAllDisplaysWithOptions(d.kCGCaptureNoOptions) = 0 then

dim c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.ReleaseAllDisplays
else
MsgBox "Failed to capture displays."
end if
```

Notes:

This has the nice effect of providing an immersive environment, and preventing other apps from trying to adjust themselves to display changes only needed by your app.

Use kCGCaptureNoOptions and kCGCaptureNoFill for options parameter.
Returns an error code.

54.10.13 CaptureWithOptions(options as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Captures this display for your use.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.CaptureWithOptions(d.kCGCaptureNoOptions) = 0 then

dim c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.Release
else
MsgBox "Failed to capture displays."
end if
```

Notes:

Don't forget to Release the display later.
Returns an error code.
Use kCGCaptureNoOptions and kCGCaptureNoFill for options parameter.

54.10.14 CreateImage as CGImageMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return an image containing the contents of the display.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim img as CGImageMBS = d.CreateImage

Backdrop = img.Picture
```

Notes: Requires Mac OS X 10.6.

54.10.15 CreateImageAsync(receiverDelegate as CreateImageAsyncDelegateMBS, jpegQuality as Double = 0.9, tag as Variant = nil)

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

Function: Asynchronously creates an image with screenshot.
Notes:

If jpeg is >= 0, we use it as quality for the jpeg compression and provide the JPEG data as memoryblock in the delegate.
Tag is passed through as is.

Delegate declaration:
CreateImageAsyncDelegateMBS(img as CGImageMBS, JPEGData as MemoryBlock, Tag as Variant)

54.10.16 CreateImageForRect(rect as CGRectMBS) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return an image containing the contents of the rectangle rect, specified in display space, of the display identified by self.
Example:

```
dim r as CGRectMBS = CGMakeRectMBS(100,100,500,500)
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim img as CGImageMBS = d.CreateImageForRect(r)

Backdrop = img.Picture
```

Notes:

The actual rectangle used is the rectangle returned from CGRectIntegral(rect).
Requires Mac OS X 10.6.

54.10.17 DrawingContext as CGContextMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return a CGContext suitable for drawing to the captured display, or nil if display has not been captured.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay
```

```
if d.Capture = 0 then

dim c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.Release
else
MsgBox "Failed to capture displays."
end if
```

Notes:

The context is owned by the device and should not be released by the caller.

The context remains valid while the display is captured and while the display configuration is unchanged. Releasing the captured display or reconfiguring the display invalidates the drawing context.

The determine when the display configuration is changing, use CGDisplayReconfigurationEventMBS class.

54.10.18 GetActiveDisplayList as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array with the active displays.
Example:

```
// List all displays in a 2 column listbox:

Listbox1.DeleteAllRows

for each d as CGDisplayMBS in CGDisplayMBS.GetActiveDisplayList

Listbox1.AddRow hex(d.Handle)
Listbox1.cell(Listbox1.LastIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes:

Returns an empty array on any error.

The first display returned in the list is the main display, the one with the menu bar.
When mirroring, this will be the largest display, or if all are the same size, the one with the deepest pixel depth.

This function was named CGGetActiveDisplayListMBS in older plugin versions.

54.10.19 GetDisplaysWithOpenGLDisplayMask(mask as Integer) as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Find all displays for the given OpenGL mask.
Notes: Returns an empty array on any error.

54.10.20 GetDisplaysWithPoint(cgpoint as CGPointMBS) as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array of CGDisplayMBS objects who are visible at the point on the virtual screen.
Example:

```
// List all displays in a 2 column listbox which match the point:

Listbox1.DeleteAllRows

dim p as CGPointMBS = CGMakePointMBS(100,100)
for each d as CGDisplayMBS in CGDisplayMBS.GetDisplaysWithPoint(p)

Listbox1.AddRow hex(d.Handle)
Listbox1.cell(Listbox1.LastIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes:

Returns an empty array on any error.

This function was called CGGetDisplaysWithPointMBS in older plugin versions.
See also:

• 54.10.21 GetDisplaysWithPoint(x as Double, y as Double) as CGDisplayMBS() 10316

54.10.21 GetDisplaysWithPoint(x as Double, y as Double) as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array of CGDisplayMBS objects who are visible at the point on the virtual screen.
Example:

```
// List all displays in a 2 column listbox which match the point:

Listbox1.DeleteAllRows

for each d as CGDisplayMBS in CGDisplayMBS.GetDisplaysWithPoint(100,100)

Listbox1.AddRow hex(d.Handle)
Listbox1.cell(Listbox1.LastIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes:

Returns an empty array on any error.

This function was called CGGetDisplaysWithPointMBS in older plugin versions.
See also:

• 54.10.20 GetDisplaysWithPoint(cgpoint as CGPointMBS) as CGDisplayMBS() 10315

54.10.22 GetDisplaysWithRect(cgrect as CGRectMBS) as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array of CGDisplayMBS objects who are visible within the rectangle on the virtual screen.
Example:

```
// List all displays in a 2 column listbox which match the rectangle:

Listbox1.DeleteAllRows

dim p as CGRectMBS = CGMakeRectMBS(100,100,100,100)
for each d as CGDisplayMBS in CGDisplayMBS.GetDisplaysWithRect(p)

Listbox1.AddRow hex(d.Handle)
Listbox1.cell(Listbox1.LastIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)
```

next

Notes:

Returns an empty array on any error.
This function was called CGGetDisplaysWithRectMBS in older plugin versions.
See also:

- 54.10.23 GetDisplaysWithRect(x as Double, y as Double, w as Double, h as Double) as CGDisplayMBS() 10317

54.10.23 GetDisplaysWithRect(x as Double, y as Double, w as Double, h as Double) as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array of CGDisplayMBS objects who are visible within the rectangle on the virtual screen.
Example:

```
// List all displays in a 2 column listbox which match the rectangle:

Listbox1.DeleteAllRows

for each d as CGDisplayMBS in CGDisplayMBS.GetDisplaysWithRect(100,100,100,100)

Listbox1.AddRow hex(d.Handle)
Listbox1.cell(Listbox1.LastIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes:

Returns an empty array on any error.
This function was called CGGetDisplaysWithRectMBS in older plugin versions.
See also:

- 54.10.22 GetDisplaysWithRect(cgrect as CGRectMBS) as CGDisplayMBS() 10316

54.10.24 GetDisplayTransferByTable(capacity as Integer, red as memoryblock, green as memoryblock, blue as memoryblock, byref samplecount as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Get transfer tables.
Notes:

Capacity should contain the number of samples each array can hold, and sampleCount is filled in with the number of samples actually copied in.

You must pass in Memoryblocks with the given size (capacity*4 Bytes).
Returns an error code.

54.10.25 GetDisplayTransferFormula(byref formula as CGDisplayTransferFormulaMBS) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Queries the display for the current gamma formula.
Notes: Returns an error code.

54.10.26 GetLastMouseDelta(byref deltax as Integer, byref deltay as Integer)

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Report the mouse position change associated with the last mouse move event recieved by this application.

54.10.27 GetOnlineDisplayList as CGDisplayMBS()

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array with the online displays.
Example:

```
// List all online displays in a 2 column listbox:

Listbox1.DeleteAllRows

for each d as CGDisplayMBS in CGDisplayMBS.GetOnlineDisplayList
```

```
Listbox1.AddRow hex(d.Handle)
Listbox1.cell(Listbox1.LastIndex,1)=str(d.PixelsWide)+" x "+str(d.PixelsHigh)

next
```

Notes:

Returns an empty array on any error.

The first display returned in the list is the main display, the one with the menu bar.
When mirroring, this will be the largest display, or if all are the same size, the one with the deepest pixel depth.

With hardware mirroring, a display may be on-line, but not necessarily active, or drawable. Programs which manipulate display settings such as the palette or gamma tables need access to all displays in use, including hardware mirrors which are not drawable.

This function was named CGGetOnlineDisplayListMBS in older plugin versions.

54.10.28 HideCursor as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Hides the mouse cursor.
Notes:

Returns an error code.
Decrements hide cursor count.

54.10.29 Info as Dictionary

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the information CFDictionary about the display.
Example:

```
dim c as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim d as Dictionary = c.Info

MsgBox d.Value("DisplaySerialNumber")
```

Notes:

On any error the return value is nil.
This function leaks around 4 to 16 KB of memory on Mac OS X 10.4. Not in the versions 10.3 or 10.5.

54.10.30 InfoAsCFDictionary as Variant

MBS MacCG Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Returns the information CFDictionary about the display.
Notes:

On any error the return value is nil.
Returns a CFDictionaryMBS object. Returned as Variant to reduce plugin dependencies.

54.10.31 IsCaptured as boolean

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns true if you captured this display.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.IsCaptured)
```

54.10.32 MainDisplay as CGDisplayMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the display object of the current main display.
Example:

```
dim c as CGDisplayMBS = CGDisplayMBS.MainDisplay

MsgBox str(c.PixelsWide)+" x "+str(c.PixelsHigh)
```

54.10.33 MoveCursorToPoint(x as Double, y as Double) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Move the cursor to the specified point relative to the display origin (the upper left corner of the display).
Example:

```
Function KeyDown(Key As String) As Boolean
// in a window keydown event:

if asc(key)=32 then
dim c as new CGDisplayMBS
dim error as Integer = c.MoveCursorToPoint(200,200)

Title=str(error) // zero on success

end if

End Function
```

Notes:

Returns CGDisplayNoErr (0) on success.
No events are generated as a result of this move.
Points that would lie outside the desktop are clipped to the desktop.

54.10.34 OpenGLDisplayMask as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the OpenGL display mask for display, or 0 is display is an invalid display.

54.10.35 Release as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Releases the display.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.Capture = 0 then

dim c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
```

```
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.Release
else
MsgBox "Failed to capture displays."
end if
```

Notes: Returns an error code.

54.10.36 ReleaseAllDisplays as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Release all captured displays.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay

if d.CaptureAllDisplays = 0 then

dim c as CGContextMBS = d.DrawingContext

// watch it drawing red
c.SetRGBFillColor 1.0, 0.0, 0.0, 1.0
c.FillRect CGMakeRectMBS(0,0,d.PixelsWide,d.PixelsHigh)

DelayMBS 3.0

call d.ReleaseAllDisplays
else
MsgBox "Failed to capture displays."
end if
```

Notes: Release all captured displays, and restore the display modes to the user's preferences. May be used in conjunction with Capture or CaptureAllDisplays.

54.10.37 RestoreColorSyncSettings

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Restore gamma tables of system displays to the user's ColorSync specified values.

54.10.38 SetDisplayMode(mode as CGDisplayModeMBS) as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Switch the display mode to mode.
Notes:

The selected display mode persists for the life of the program, and automatically reverts to the permanent setting when the program terminates.

When changing display modes of displays in a mirroring set, other displays in the mirroring set will be set to a display mode capable of mirroring the bounds of the largest display being explicitly set.

Note that after switching, display parameters and addresses may change.

54.10.39 SetDisplayTransferByByteTable(count as Integer, red as memoryblock, green as memoryblock, blue as memoryblock) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Set a display gamma/transfer function using tables of data for each channel.
Notes:

As a convenience, allow setting of the gamma table by byte values.
Returns an error code.

54.10.40 SetDisplayTransferByTable(count as Integer, red as memoryblock, green as memoryblock, blue as memoryblock) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Set a display gamma/transfer function.
Notes:

Set a display gamma/transfer function using tables of data for each channel.
Values within each table should have values in the range of 0.0 through 1.0.
The same table may be passed in for red, green, and blue channels. 'count' indicates the number of entries in each table.
The tables are interpolated as needed to generate the number of samples needed by hardware.

Returns an error code.

54.10.41 SetDisplayTransferFormula(formula as CGDisplayTransferFormulaMBS) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Set a display gamma/transfer function.
Notes:

Set a display gamma/transfer function from a formula specifying min and max values and a gamma for each channel.
Gamma values must be greater than 0.0.
To get an antigamma of 1.6, one would specify a value of (1.0 / 1.6)
Min values must be greater than or equal to 0.0 and less than 1.0.
Max values must be greater than 0.0 and less than or equal to 1.0.
Out of range values, or Max greater than or equal to Min result in a kCGSRangeCheck error.

Values are computed by sampling a function for a range of indices from 0 through 1: value = Min + ((Max - Min) * pow(index, Gamma))
The resulting values are converted to a machine specific format and loaded into hardware.

Returns an error code.

54.10.42 SetRotation(angle as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Rescans the bus of displays and changes the rotation of the display.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim e as Integer = d.SetRotation(90)

if e<>0 then
MsgBox "Error: "+str(e)
end if
```

Notes:

Returns IOKit error code. Zero means success.

Lasterror is set.

54.10.43 SetStereoOperation(stereo as boolean, forceBlueLine as boolean, option as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Immediately enable or disable stereo operation for a display.
Notes:

Note that the system normally detects the presence of a stereo window, and will automatically switch a display containing a stereo window to stereo operation. This function provides a mechanism to force a display to stereo operation, and to set options (such as blue line sync signal) when in stereo operation.

When in stereo operation, a display may need to generate a special stereo sync signal as part of the video output. The sync signal consists of a blue line which occupies the first 25% of the last scanline for the left eye view, and the first 75% of the last scanline for the right eye view. The remainder of the scanline is black. To force the display to generate this sync signal, pass true for forceBlueLine; otherwise, pass false.

Lasterror is set to kCGErrorSuccess on success, or kCGErrorRangeCheck if the display does not support the stereo operation settings requested.

On success, the display resolution, mirroring mode, and available display modes may change due to hardware-specific capabilities and limitations. You should check these settings to verify that they are appropriate for your application.

Lasterror is set.

54.10.44 ShieldingWindowID as UInt32

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns window ID of the shield window for the captured display, or 0 if the display is not not shielded.

54.10.45 ShieldingWindowLevel as Int32

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Returns the window level of the shield window for the captured display.

54.10.46 ShowCursor as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Shows the mouse cursor.
Notes:

Returns an error code.
Increments hide cursor count.

54.10.47 SwitchToMode(Mode as Dictionary) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Switch display mode.
Notes:

Note that after switching, display parameters and addresses may change.
The selected display mode persists for the life of the program, and automatically reverts to the permanent setting made by Preferences when the program terminates.
The mode dictionary passed in must be a dictionary vended by other CGDirectDisplay APIs such as BestModeForParameters() and AvailableModes().
Returns an error code.

54.10.48 WaitForBeamPositionOutsideLines(upperScanLine as UInt32, lowerScanLine as UInt32) as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Wait until the beam position is outside the range specified.
Notes:

Wait until the beam position is outside the range specified by upperScanLine and lowerScanLine.
Note that if upperScanLine and lowerScanLine encompass the entire display height, the function returns an error.
lowerScanLine must be greater than or equal to upperScanLine.

Some display systems may not conventional video vertical and horizontal sweep in painting.
These displays report a kCGDisplayRefreshRate of 0 in the CFDictionaryRef returned by CurrentMode().
On such displays, this function returns at once.

Some drivers may not implement support for this mechanism.
On such displays, this function returns at once.

Returns CGDisplayNoErr on success, and an error if display or upperScanLine and lowerScanLine are invalid.

The app should set the values of upperScanLine and lowerScanLine to allow enough lead time for the drawing operation to complete. A common strategy is to wait for the beam to pass the bottom of the drawing area, allowing almost a full vertical sweep period to perform drawing.

To do this, set upperScanLine to 0, and set lowerScanLine to the bottom of the bounding box:
lowerScanLine = (CGBeamPosition)(cgrect.origin.y + cgrect.size.height);

IOKit may implement this as a spin-loop on the beam position call used for BeamPosition().
On such system the function is CPU bound, and subject to all the usual scheduling pre-emption.
In particular, attempting to wait for the beam to hit a specific scanline may be an exercise in frustration.

These functions are advisary in nature, and depend on IOKit and hardware specific drivers to implement support. If you need extremely precise timing, or access to vertical blanking interrupts, you should consider writing a device driver to tie into hardware-specific capabilities.

Returns an error code.

54.10.49 Properties

54.10.50 BeamPosition as UInt32

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns the current beam position on the display.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.BeamPosition)
```

Notes:

If display is invalid, or the display does not implement conventional video vertical and horizontal sweep in painting, or the driver does not implement this functionality, 0 is returned.
(Read only property)

54.10.51 Bounds as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Return screen size and origin in global coords.
Notes:

Empty rect or nil if display is invalid.
(Read only property)

54.10.52 Brightness as Double

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Get/Set brightness of display.
Notes:

Returns -1 if not supported.
Lasterror is set.
(Read and Write property)

54.10.53 CanSetPalette as boolean

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Returns true if the current display mode supports palettes.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.CanSetPalette)
```

Notes: (Read only property)

54.10.54 ColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the color space for a display.
Example:

```
dim d as new CGDisplayMBS // pick main display
```

```
MsgBox str(d.ColorSpace.Model) // typical 1 = CGColorSpaceMBS.kCGColorSpaceModelRGB
```

Notes:

This function returns a display-dependent ICC-based color space. You can use this function when rendering content for a specific display in order to produce color-matched output for that display.

Available in Mac OS X v10.5 and later.
(Read only property)

54.10.55 CurrentMode as Dictionary

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Return a Dictionary describing the current display mode.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim dic as Dictionary = d.CurrentMode

MsgBox dic.Value(d.kCGDisplayWidth)+" x "+dic.Value(d.kCGDisplayHeight)
```

Notes:

Returns nil on any error.
(Read only property)

54.10.56 DisplayMode as CGDisplayModeMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the current mode of the specified display.
Example:

```
dim d as CGDisplayMBS = CGDisplayMBS.MainDisplay
MsgBox str(d.DisplayMode.Width)+" x "+str(d.DisplayMode.Height)
```

Notes:

Returns nil on any error.
Requires Mac OS X 10.6

(Read only property)

54.10.57 DisplayProductNames as Dictionary

MBS MacCG Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Queries product names for display in all available languages.
Example:

```
dim display as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim names as Dictionary = display.DisplayProductNames

MsgBox names.Lookup("en_US", "?")
```

Notes: (Read only property)

54.10.58 Handle as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The handle to the current display.
Notes:

Internally: The DisplayID.
0 is the main display (to keep it easier).
(Read only property)

54.10.59 IOServicePort as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the IOKit service port of a display.
Notes: (Read only property)

54.10.60 IsActive as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is active.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.IsActive)
```

Notes:

If true, the specified display is active; otherwise, false.

An active display is connected, awake, and available for drawing. In a hardware mirroring set, only the primary display is active.
(Read only property)

54.10.61 IsAlwaysInMirrorSet as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is always in a mirroring set.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.IsAlwaysInMirrorSet)
```

Notes:

If true, the specified display is in a mirroring set and cannot be removed from this set.

Some hardware configurations support the connection of auxiliary displays that always mirror the main display, and therefore cannot be removed from the mirroring set to which they belong.
(Read only property)

54.10.62 IsAsleep as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is sleeping (and is therefore not drawable.)
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.IsAsleep)
```

Notes:

If true, the specified display is in sleep mode; otherwise, false.

A display is sleeping when its frame buffer and the attached monitor are in reduced power mode. A sleeping display is still considered to be a part of global display (desktop) space, but it is not drawable.
(Read only property)

54.10.63 IsBuiltin as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is built-in, such as the internal display in portable systems.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.IsBuiltin)
```

Notes:

If true, the specified display is considered to be a built-in display; otherwise, false.

Portable systems typically identify the internal LCD panel as a built-in display.

Note that it is possible and reasonable for a system to have no displays marked as built-in. For example, a portable system running with the lid closed may report no built-in displays.
(Read only property)

54.10.64 IsInHWMirrorSet as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is in a hardware mirroring set.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.IsInHWMirrorSet)
```

Notes:

If true, the specified display is a member of a hardware mirroring set; otherwise, false.

When hardware mirroring is enabled, the contents of a double frame buffer are rendered in all displays in the hardware mirroring set.
(Read only property)

54.10.65 IsInMirrorSet as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is in a mirroring set.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.IsInMirrorSet)
```

Notes: (Read only property)

54.10.66 IsMain as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is the main display.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.IsMain)
```

Notes:

If true, the specified display is currently the main display; otherwise, false.
(Read only property)

54.10.67 IsOnline as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is connected or online.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.IsOnline)
```

Notes:

Returns true if the specified display is connected; otherwise, false.

A display is considered connected or online when the frame buffer hardware is connected to a monitor.

You can use this function to determine if someone has hot-plugged a display to the system. Note that hot-plugging is a hardware feature that may not be present on all displays.
(Read only property)

54.10.68 IsStereo as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether a display is running in a stereo graphics mode.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.IsStereo)
```

Notes:

If true, the specified display is running in a stereo graphics mode; otherwise, false.

Available in Mac OS X v10.4 and later.
(Read only property)

54.10.69 LastError as Integer

MBS MacCG Plugin, Plugin Version: 15.4, Platform: macOS, Targets: Desktop only.

Function: The last error code.
Notes:

Only set for a few properties like brightness where we do have an error code.
(Read only property)

54.10.70 MirrorsDisplay as CGDisplayMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: For a secondary display in a mirroring set, returns the primary display.
Notes:

Returns the primary display in the mirroring set. Returns kCGNullDirectDisplay if the specified display is actually the primary display or is not in a mirroring set.
(Read only property)

54.10.71 ModelNumber as Integer

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the model number of a display monitor.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.ModelNumber)
```

Notes:

A model number for the monitor associated with the specified display, or a constant to indicate an exception—see the discussion below.

This function uses I/O Kit to identify the monitor associated with the specified display. The return value depends on the following:

If I/O Kit can identify the monitor, the product ID code for the monitor is returned.
If I/O Kit can't identify the monitor, kDisplayProductIDGeneric is returned.
If no monitor is connected, a value of 0xFFFFFFFF is returned.

(Read only property)

54.10.72 PixelsHigh as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Height of the display in pixels.
Notes:

dim d as new CGDisplayMBS // pick main display

MsgBox str(D.PixelsHigh)
(Read only property)

54.10.73 PixelsWide as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: Width of the display in pixels.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(D.PixelsWide)
```

Notes: (Read only property)

54.10.74 PrimaryDisplay as CGDisplayMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the primary display in a hardware mirroring set.
Notes:

The primary display in the mirror set. If display is not hardware-mirrored, this function simply returns display.

In hardware mirroring, the contents of a double frame buffer are rendered in two or more displays simultaneously. The mirrored displays are said to be in a hardware mirroring set.

At the discretion of the device driver, one of the displays in a hardware mirroring set is designated as the

primary display. The device driver binds the drawing engine, hardware accelerator, and 3D engine to the primary display, and directs all drawing operations to this display.
(Read only property)

54.10.75 RefreshRate as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries refresh rate in Hz for this display.
Example:

```
dim m as CGDisplayMBS = CGDisplayMBS.MainDisplay
MsgBox str(m.RefreshRate)+" Hz"
```

Notes:

Returns 60 for LCD displays.
(Read only property)

54.10.76 Rotation as Double

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the rotation angle of a display in degrees.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.Rotation)
```

Notes:

The rotation angle of the display in degrees, or 0 if the display is not valid.

This function returns the rotation angle of a display in a clockwise direction. For example, if the specified display is rotated clockwise 90 degrees then this function returns 90.0. After a 90 degree clockwise rotation, the physical bottom of the display is on the left side and the physical top is on the right side.

Available in Mac OS X v10.5 and later.
(Read only property)

54.10.77 ScreenSizeHeight as Double

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the height of a display in millimeters.
Example:

```
dim c as new CGDisplayMBS
dim lines(-1) as string

dim DPIWidth as Double = c.PixelsWide/(c.ScreenSizeWidth/10.0/2.54)
dim DPIHeight as Double = c.PixelsHigh/(c.ScreenSizeHeight/10.0/2.54)

lines.append str(c.ScreenSizeWidth)+" x "+str(c.ScreenSizeHeight)+" Millimeter with"
lines.Append str(c.PixelsWide)+" x "+str(c.PixelsHigh)+" Pixel is"
lines.Append str(DPIWidth)+" x "+str(DPIHeight)+" DPI"

MsgBox Join(lines,EndOfLine)
```

Notes:

If Extended Display Identification Data (EDID) for the display device is not available, the size is estimated based on the device width and height in pixels from CGDisplayBounds, with an assumed resolution of 2.835 pixels/mm or 72 DPI, a reasonable guess for displays predating EDID support.
(Read only property)

54.10.78 ScreenSizeWidth as Double

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the width of a display in millimeters.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(d.ScreenSizeHeight) // for example 400 on a 30" Apple Display
MsgBox str(d.ScreenSizeWidth) // for example 640 on a 30" Apple Display
```

Notes:

If Extended Display Identification Data (EDID) for the display device is not available, the size is estimated based on the device width and height in pixels from CGDisplayBounds, with an assumed resolution of 2.835 pixels/mm or 72 DPI, a reasonable guess for displays predating EDID support.
(Read only property)

54.10.79 SerialNumber as Integer

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the serial number of a display monitor.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(D.SerialNumber)
```

Notes:

Returns the serial number for the monitor associated with the specified display, or a constant to indicate an exception—see the discussion below.

This function uses I/O Kit to identify the monitor associated with the specified display.

If I/O Kit can identify the monitor:

If the manufacturer has encoded a serial number for the monitor, the number is returned.
If there is no encoded serial number, 0x00000000 is returned.

If I/O Kit cannot identify the monitor:

If a monitor is connected to the display, 0x00000000 is returned.
If no monitor is connected to the display hardware, a value of 0xFFFFFFFF is returned.

Note that a serial number is meaningful only in conjunction with a specific vendor and product or model.
(Read only property)

54.10.80 UnitNumber as Integer

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the logical unit number of a display.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(D.UnitNumber)
```

Notes:

A logical unit number for the specified display.

The logical unit number represents a particular node in the I/O Kit device tree associated with the display's frame buffer. For a particular hardware configuration, this value will not change when the attached monitor is changed.

The unit number will change if the I/O Kit device tree changes, as when hardware is reconfigured, drivers are replaced, or significant changes occur to I/O Kit, so it should not be assumed to be invariant across login sessions.

For more information about I/O Kit, see the Apple publication "I/O Kit Fundamentals".
(Read only property)

54.10.81 UsesOpenGLAcceleration as boolean

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether Quartz is using OpenGL-based window acceleration (Quartz Extreme) to render in a display.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(D.UsesOpenGLAcceleration)
```

Notes:

Return value: If true, Quartz Extreme is used to render in the specified display; otherwise, false.

Quartz Extreme is an OpenGL-based, hardware-accelerated window compositor available in Mac OS X version 10.2 and later. Quartz Extreme requires a minimum hardware configuration to operate.

The information this function provides is typically used to adjust the demands of drawing operations to the capabilities of the display hardware. For example, an application running on an unaccelerated system could disable live window-resizing.
(Read only property)

54.10.82 VendorNumber as Integer

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the vendor number of the specified display's monitor.
Example:

```
dim d as new CGDisplayMBS // pick main display

MsgBox str(D.VendorNumber)
// 1552 seems to be Apple
```

Notes:

A vendor number for the monitor associated with the specified display, or a constant to indicate an exception—see the discussion below.

This function uses I/O Kit to identify the monitor associated with the specified display.

There are three cases:

If I/O Kit can identify the monitor, the vendor ID is returned.
If I/O Kit cannot identify the monitor, kDisplayVendorIDUnknown is returned.
If there is no monitor associated with the display, 0xFFFFFFFF is returned.
(Read only property)

54.10.83 Constants

54.10.84 kCGCaptureNoFill = 1

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the capture option flags.
Notes: Disables fill with black on capture.

54.10.85 kCGCaptureNoOptions = 0

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the capture option flags.
Notes: Default behavior.

54.10.86 kCGDisplayBitsPerPixel = "BitsPerPixel"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes:

The number of bits per pixel.
The value for this key is a number inside the dictionary.

54.10.87 kCGDisplayBitsPerSample = "BitsPerSample"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes:

The number of bits per sample.
The value for this key is a number inside the dictionary.

54.10.88 kCGDisplayBytesPerRow = "kCGDisplayBytesPerRow"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary

54.10.89 kCGDisplayHeight = "Height"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes:

The display height.
The value for this key is a number inside the dictionary.

54.10.90 kCGDisplayIOFlags = "IOFlags"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes: The value for this key is a number inside the dictionary.

54.10.91 kCGDisplayMode = "Mode"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes: The value for this key is a number inside the dictionary.

54.10.92 kCGDisplayModeIsInterlaced = "kCGDisplayModeIsInterlaced"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes: This key reflects interesting bits of the IOKit display mode flags.

54.10.93 kCGDisplayModeIsSafeForHardware = "kCGDisplayModeIsSafeForHardware"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes: Set if display mode doesn't need a confirmation dialog to be set.

54.10.94 kCGDisplayModeIsStretched = "kCGDisplayModeIsStretched"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes: This key reflects interesting bits of the IOKit display mode flags.

54.10.95 kCGDisplayModeIsTelevisionOutput = "kCGDisplayModeIsTelevisionOutput"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes: This key reflects interesting bits of the IOKit display mode flags.

54.10.96 kCGDisplayModeUsableForDesktopGUI = "UsableForDesktopGUI"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes:

Whether this display can be used for desktop GUI.
The value for this key is a boolean inside the dictionary.

54.10.97 kCGDisplayRefreshRate = "RefreshRate"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes:

The refresh rate.
The value for this key is a number inside the dictionary.

54.10.98 kCGDisplaySamplesPerPixel = "SamplesPerPixel"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes:

The number of samples per pixel.
The value for this key is a number inside the dictionary.

54.10.99 kCGDisplayShowDuplicateLowResolutionModes = "kCGDisplayResolution"

MBS MacCG Plugin, Plugin Version: 21.5.

Function: One of the keys for options dictionary
Notes: Pass to AllDisplayModes with boolean to indicate whether to include duplicate low resolution modes.

54.10.100 kCGDisplayWidth = "Width"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary
Notes:

The width of the display.
The value for this key is a number inside the dictionary.

54.10.101 kCGIODisplayModeID = "IODisplayModeID"

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the keys for mode dictionary

54.10.102 Delegates

54.10.103 CreateImageAsyncDelegateMBS(img as CGImageMBS, JPEGData as MemoryBlock, Tag as Variant)

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

Function: The delegate for CreateImageAsync method.

54.11 class CGDisplayModeMBS

54.11.1 class CGDisplayModeMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The class for a display mode.
Notes:

Requires Mac OS X 10.6
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

54.11.4 Methods

54.11.5 Constructor

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

54.11.6 Properties

54.11.7 Handle as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

54.11.8 Height as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the height in pixels of the specified display mode.
Example:

```
dim display as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim mode as CGDisplayModeMBS = Display.DisplayMode

MsgBox str(mode.Height)+" Pixel"
```

Notes:

Call CGDisplayModeGetHeight function.
(Read only property)

54.11.9 IODisplayModeID as Int32

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the IOKit display mode ID of the specified display mode.
Notes:

Call CGDisplayModeGetIODisplayModeID function.
(Read only property)

54.11.10 IOFlags as UInt32

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the IOKit flags of the specified display mode.
Example:

```
dim display as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim mode as CGDisplayModeMBS = Display.DisplayMode

MsgBox str(mode.IOFlags)
```

Notes:

Call CGDisplayModeGetIOFlags function.
(Read only property)

54.11.11 IsUsableForDesktopGUI as boolean

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return true if the specified mode is usable for displaying the desktop GUI; false otherwise.
Notes:

Call CGDisplayModeIsUsableForDesktopGUI function.
(Read only property)

54.11.12 PixelEncoding as string

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return a string representing the pixel encoding of the specified display mode, expressed as a CFString containing an IOKit graphics mode.
Example:

```
dim display as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim mode as CGDisplayModeMBS = Display.DisplayMode

MsgBox mode.PixelEncoding // shows e.g. ———RRRRRRRRGGGGGGGGBBBBBBBB
```

Notes:

Call CGDisplayModeCopyPixelEncoding function.
(Read only property)

54.11.13 PixelHeight as Integer

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Return the height in pixels of the specified display mode.
Notes:

Call CGDisplayModeGetPixelHeight function.
(Read only property)

54.11.14 PixelWidth as Integer

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Return the width in pixels of the specified display mode.

Notes:

Call CGDisplayModeGetPixelWidth function.
(Read only property)

54.11.15 RefreshRate as Double

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the refresh rate of the specified display mode.
Example:

```
dim display as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim mode as CGDisplayModeMBS = Display.DisplayMode

MsgBox str(mode.RefreshRate)
```

Notes:

Call CGDisplayModeGetRefreshRate function.
(Read only property)

54.11.16 Width as Integer

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Return the width in pixels of the specified display mode.
Example:

```
dim display as CGDisplayMBS = CGDisplayMBS.MainDisplay
dim mode as CGDisplayModeMBS = Display.DisplayMode

MsgBox str(mode.Width)+" Pixel"
```

Notes:

Call CGDisplayModeGetWidth function.
(Read only property)

54.12 class CGDisplayReconfigurationEventMBS

54.12.1 class CGDisplayReconfigurationEventMBS

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The class to listen for display configuration changes.
Notes:

In constructor the plugin registers for the event and in destructor unregisters. So keep the object reference alive to receive events.

events are invoked when the app is listening for events, on the event processing thread, or from within the display reconfiguration function when in the program that is driving the reconfiguration.

events should avoid changing display configurations, and should not raise exceptions or perform a non-local return such as calling longjmp.

Before display reconfiguration, a event fires to inform applications of a configuration change. The event runs once for each on-line display. The flag is set to kCGDisplayBeginConfigurationFlag. This event does not carry other per-display information, as details of how a reconfiguration affects a particular device rely on device-specific behaviors which may not be exposed by a device driver.

After display reconfiguration, at the time the event function is invoked, all display state reported by CoreGraphics, QuickDraw, and the Carbon Display Manager API will be up to date. This event runs after the Carbon Display Manager notification events. The event runs once for each added, removed, and currently on-line display. Note that in the case of removed displays, calls into the CoreGraphics API with the removed display ID will fail.

54.12.4 Events

54.12.5 DisplayReconfiguration(DisplayID as Integer, flags as Integer)

MBS MacCG Plugin, Plugin Version: 11.1, Platform: macOS, Targets: .

Function: This event is invoked whenever the configuration of a local display is changed.

54.12.6 Constants

54.12.7 kCGDisplayAddFlag = 16

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Display Added

54.12.8 kCGDisplayBeginConfigurationFlag = 1

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Begin Configuration for display.

54.12.9 kCGDisplayDesktopShapeChangedFlag = 4096

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Desktop Shape Changed.

54.12.10 kCGDisplayDisabledFlag = 512

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Display disabled.

54.12.11 kCGDisplayEnabledFlag = 256

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Display enabled.

54.12.12 kCGDisplayMirrorFlag = 1024

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Mirror enabled

54.12.13 kCGDisplayMovedFlag = 2

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Display Moved

54.12.14 kCGDisplayRemoveFlag = 32

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Display Removed

54.12.15 kCGDisplaySetMainFlag = 4

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Set Main

54.12.16 kCGDisplaySetModeFlag = 8

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Set Mode

54.12.17 kCGDisplayUnMirrorFlag = 2048

MBS MacCG Plugin, Plugin Version: 11.1.

Function: One of the possible flag values.
Notes: Mirror disabled

54.13 class CGDisplayStreamEventMBS

54.13.1 class CGDisplayStreamEventMBS

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: CGDisplayStreamEventMBS provides a streaming API for capturing display updates in a real-time manner.
Notes:

It can also provide scaling and color space conversion services, as well as allow capturing sub regions of the display.
Requires OS X 10.8.

54.13.2 Methods

54.13.3 Constructor(DisplayHandle as Integer, outputWidth as Integer, outputHeight as Integer, pixelFormat as Integer = 0, properties as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: Creates a new CGDisplayStream.
Notes:

This function creates a new CGDisplayStream that is to be used to get a stream of frame updates from a particular display.

DisplayHandle: The CGDirectDisplayID to use as the source for generated frames. (Handle from CGDisplayMBS class)
outputWidth: The output width (in pixels, not points) of the frames to be generated. Must not be zero.
outputWidth: The output height (in pixels, not points) of the frames to be generated. Must not be zero.
pixelFormat: The desired CoreVideo/CoreMedia-style pixel format of the output IOSurfaces. If 0 the plugin will use RGBA.
properties: Any optional properties of the CGDisplayStream.

54.13.4 kCGDisplayStreamColorSpace as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

Set the desired CGColorSpace of the output frames.

By default the color space will be that of the display.

54.13.5 kCGDisplayStreamDestinationRect as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

This may be used to request where within the destination buffer the display updates should be placed. Use CGRectCreateDictionaryRepresentation to convert from a CGRect to the value used here.
Note: The coordinate system for the destination rectangle is always specified in output pixels to match the fact that the output buffer size is also specified in terms of pixels.
Defaults to entire buffer

54.13.6 kCGDisplayStreamMinimumFrameTime as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

Request that the delta between frame updates be at least as much specified by this value.
Number in seconds, defaults to zero.

54.13.7 kCGDisplayStreamPreserveAspectRatio as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

Enable/disable the work the Window Server will do to preserve the display aspect ratio. By default the Window Server will assume that it should preserve the original aspect ratio of the source display rect. If the aspect ratio of the source display and the display stream destination rect are not the same, black borders will be inserted at the top/bottom or right/left sides of the destination in order to preserve the source aspect ratio.
Boolean - defaults to true

54.13.8 kCGDisplayStreamQueueDepth as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

Controls how many frames deep the frame queue will be.
Defaults to 3.

54.13.9 kCGDisplayStreamShowCursor as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: Controls whether the cursor is embedded within the provided buffers or not.

54.13.10 kCGDisplayStreamSourceRect as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

This may be used to request a subregion of the display to be provided as the source of the display stream.
Use CGRectCreateDictionaryRepresentation to convert from a CGRect to the value used here. N
Note: The coordinate system for the source rectangle is specified in display logical coordinates and not in pixels, in order to match the normal convention on HiDPI displays.
Defaults to entire display.

54.13.11 kCGDisplayStreamYCbCrMatrix as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

When outputting frames in 420v or 420f format, this key may be used to control which YCbCr matrix is used
The value should be one of the three kCGDisplayStreamYCbCrMatrix values specified below:
kCGDisplayStreamYCbCrMatrix_SMPTE_240M_1995
kCGDisplayStreamYCbCrMatrix_ITU_R_709_2
kCGDisplayStreamYCbCrMatrix_ITU_R_601_4

54.13.12 kCGDisplayStreamYCbCrMatrix_ITU_R_601_4 as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: A possible value for kCGDisplayStreamYCbCrMatrix key.

54.13.13 kCGDisplayStreamYCbCrMatrix_ITU_R_709_2 as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: A possible value for kCGDisplayStreamYCbCrMatrix key.

54.13.14 kCGDisplayStreamYCbCrMatrix_SMPTE_240M_1995 as String

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: A possible value for kCGDisplayStreamYCbCrMatrix key.

54.13.15 Start

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: Begin delivering frame updates to the event.

54.13.16 Stop

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: End delivery of frame updates.
Notes:

After this call returns, the CGDisplayStream callback function will eventually be called with a status of StatusStopped. After that point it is safe to release the object.
It is safe to call this function from within the event, but the previous caveat still applies.

54.13.17 Properties

54.13.18 Handle as Integer

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

54.13.19 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: The lasterror code.
Notes: (Read only property)

54.13.20 Events

54.13.21 FrameAvailable(Status as Integer, displayTime as UInt64, frameSurfaceHandle as Integer, Update as CGDisplayStreamUpdateMBS)

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

Function: A new frame is available.
Notes:

The event used for new frame delivery by CGDisplayStream objects

For each frame that is generated by the WindowServer for a particular display, the user provided event is invoked and provides the user with an IOSurface handle (inside update object), that contains the pixel data for the new frame, as well as a CGDisplayStreamUpdateMBS that contains all of the metadata associated with that IOSurface.

frameSurfaceHandle: The IOSurfaceRef for the current frame. May be zero/nil in some cases. The plugin retains it as part of Update object to keeps it alive.
displayTime: The mach absolute time of when the corresponding frame was to be displayed by the WindowServer
Update: The CGDisplayStreamUpdateMBS for the current frame. will be nil in cases when status is not kCGDisplayStreamFrameStatusFrameComplete.

54.13.22 Constants

54.13.23 StatusFrameBlank = 2

MBS MacCG Plugin, Plugin Version: 16.1.

Function: One of the frame status constants.
Notes: As of displayTime, the display is has gone blank

54.13.24 StatusFrameComplete = 0

MBS MacCG Plugin, Plugin Version: 16.1.

Function: One of the frame status constants.
Notes: A new frame has been generated by the Window Server for a particular display at time displayTime.

54.13.25 StatusFrameIdle = 1

MBS MacCG Plugin, Plugin Version: 16.1.

Function: One of the frame status constants.
Notes: The Window Server did not generate a new frame for displayTime

54.13.26 StatusStopped = 3

MBS MacCG Plugin, Plugin Version: 16.1.

Function: One of the frame status constants.
Notes: The display stream has stopped and no more calls will be made to the handler until the stream is started.

54.14 class CGDisplayStreamUpdateMBS

54.14.1 class CGDisplayStreamUpdateMBS

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: A single frame's extra metadata that describes useful frame delta information.
Notes: A CGDisplayStreamUpdate encapsulates information about what portions of a frame have changed relative to a previously delivered frame. This includes regions that were changed in any way, which ones were actually redrawn, and which regions were merely copied from one place to another.

54.14.2 Methods

54.14.3 getRects(type as Integer) as CGRectMBS()

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: Returns an array of CGRectMBS that describe what parts of the frame have changed relative to the previously delivered frame.
Notes: This rectangle list encapsulates both the update rectangles and movement rectangles.

54.14.4 Properties

54.14.5 CIImage as Variant

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: Queries the IOSurface with frame as CIImageMBS.
Notes:

Returns CIImageMBS.
(Read only property)

54.14.6 DeltaX as Double

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: The x component of the movement delta.
Notes: (Read only property)

54.14.7 DeltaY as Double

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: The y component of the movement delta.
Notes: (Read only property)

54.14.8 DropCount as Integer

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: Return how many frames (if any) have been dropped since the last call to the event.
Notes:

This call is primarily useful for performance measurement to determine if the client is keeping up with all WindowServer updates.
(Read only property)

54.14.9 Handle as Integer

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

54.14.10 IOSurfaceHandle as Integer

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: The internal object reference for the IOSurface.
Notes: (Read only property)

54.14.11 Constants

54.14.12 UpdateDirtyRects = 2

MBS MacCG Plugin, Plugin Version: 16.1.

Function: One of the rectangle selector values for getRects function.
Notes: The union of both refreshed and moved rects.

54.14.13 UpdateMovedRects = 1

MBS MacCG Plugin, Plugin Version: 16.1.

Function: One of the rectangle selector values for getRects function.
Notes: The rectangles that were simply moved from one part of the display to another

54.14.14 UpdateReducedDirtyRects = 3

MBS MacCG Plugin, Plugin Version: 16.1.

Function: One of the rectangle selector values for getRects function.
Notes: A possibly simplified (but overstated) array of dirty rectangles.

54.14.15 UpdateRefreshedRects = 0

MBS MacCG Plugin, Plugin Version: 16.1.

Function: One of the rectangle selector values for getRects function.
Notes: The rectangles that were refreshed on the display, not counting moved rectangles

54.15 class CGDisplayTransferFormulaMBS

54.15.1 class CGDisplayTransferFormulaMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: A class for a transfer formula.

54.15.2 Properties

54.15.3 BlueGamma as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The blue gamma value.
Notes: (Read and Write property)

54.15.4 BlueMax as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The maximum blue value.
Notes: (Read and Write property)

54.15.5 BlueMin as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The minimum blue value.
Notes: (Read and Write property)

54.15.6 GreenGamma as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The green gamma value.
Notes: (Read and Write property)

54.15.7 GreenMax as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The maximum green value.
Notes: (Read and Write property)

54.15.8 GreenMin as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The minimum green value.
Notes: (Read and Write property)

54.15.9 RedGamma as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The red gamma value.
Notes: (Read and Write property)

54.15.10 RedMax as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The maximum red value.
Notes: (Read and Write property)

54.15.11 RedMin as Double

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The minimum red value.
Notes: (Read and Write property)

54.16 class CGFontMBS

54.16.1 class CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CoreGraphics class for a font.
Notes:

The CGFontRef opaque type encapsulates font information. A font is a set of shapes or glyphs associated with a character set. A glyph can represent a single character (such as 'b'), more than one character (such as the "fi" ligature), or a special character such as a space. Quartz retrieves the glyphs for the font from ATS (Apple Type Services) and paints the glyphs based on the relevant parameters of the current graphics state.

Quartz provides a limited, low-level interface for drawing text. For information on text-drawing functions, see CGContext Reference. For full Unicode and text-layout support, use the services provided by Core Text or ATSUI).

54.16.6 Methods

54.16.7 CreateWithDataProvider(CGDataProvider as Variant) as CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a font object from data supplied from a data provider.
Notes:

Dataprovider must be a CGDataProviderMBS object.
Returns the font object or nil if the font can't be created.

Before drawing text in a Quartz context, you must set the font in the current graphics state by calling the function CGContextMBS.SetFontSize.

54.16.8 CreateWithFontName(name as string) as CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a font object corresponding to the font specified by a PostScript or full name.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Courier")
MsgBox c.FullName
```

Notes:

Returns the font object or nil if the font can't be created.
Before drawing text in a Quartz context, you must set the font in the current graphics state by calling the function CGContextMBS.SetFont.

54.16.9 CreateWithPlatformFont(ATSFontHandle as Integer) as CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a new font reference from an ATSFontRef.
Notes:

Create a CGFont using platformFontReference, a handle to a platform-specific font reference.
For MacOS X, platformFontReference should be a handle to an ATSFontRef.

54.16.10 Properties

54.16.11 Ascent as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the ascent of a font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MsgBox str(c.Ascent)
```

Notes:

The ascent is the maximum distance above the baseline of glyphs in a font. The value is specified in glyph space units.
(Read only property)

54.16.12 CapHeight as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the cap height of a font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MsgBox str(c.CapHeight)
```

Notes:

The cap height is the distance above the baseline of the top of flat capital letters of glyphs in a font. The value is specified in glyph space units.
(Read only property)

54.16.13 Descent as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the descent of a font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MsgBox str(c.Descent)
```

Notes:

The descent is the maximum distance below the baseline of glyphs in a font. The value is specified in glyph space units.
(Read only property)

54.16.14 FontBBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the bounding box of a font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
dim r as CGRectMBS = c.FontBBox
MsgBox str(r.Width)+" "+str(r.Height)
```

Notes:

The font bounding box is the union of all of the bounding boxes for all the glyphs in a font. The value is specified in glyph space units.
(Read only property)

54.16.15 FullName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the full name associated with a font object.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Courier")
MsgBox c.FullName
```

Notes: (Read only property)

54.16.16 Handle as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

54.16.17 ItalicAngle as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the italic angle of a font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MsgBox str(c.ItalicAngle)
```

Notes:

The italic angle of the font, measured in degrees counter-clockwise from the vertical.
(Read only property)

54.16.18 Leading as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the leading of a font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MsgBox str(c.Leading)
```

Notes:

The leading is the spacing between consecutive lines of text in a font. The value is specified in glyph space units.
(Read only property)

54.16.19 NumberOfGlyphs as UInt64

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the number of glyphs in a font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
```

```
MsgBox str(c.NumberOfGlyphs)
```

Notes: (Read only property)

54.16.20 PostScriptName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Obtains the PostScript name of a font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Courier")
MsgBox c.PostScriptName
```

Notes: (Read only property)

54.16.21 StemV as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the thickness of the dominant vertical stems of glyphs in a font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MsgBox str(c.StemV)
```

Notes:

The thickness of the dominant vertical stems of glyphs in a font.
(Read only property)

54.16.22 UnitsPerEm as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the number of glyph space units per em for the provided font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MsgBox str(c.UnitsPerEm)
```

Notes:

The number of glyph space units per em for the provided font.
(Read only property)

54.16.23 XHeight as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the x-height of a font.
Example:

```
dim c as CGFontMBS = CGFontMBS.CreateWithFontName("Times")
MsgBox str(c.XHeight)
```

Notes:

The x-height is the distance above the baseline of the top of flat, non-ascending lowercase letters (such as x) of glyphs in a font. The value is specified in glyph space units.
(Read only property)

54.16.24 Constants

54.16.25 kCGFontIndexInvalid = 65535

MBS MacCG Plugin, Plugin Version: 14.2.

Function: An invalid font index (a value which never represents a valid glyph).

54.16.26 kCGFontIndexMax = 65534

MBS MacCG Plugin, Plugin Version: 14.2.

Function: The maximum allowed value for font index.

54.16.27 kCGFontPostScriptFormatType1 = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the PostScript font subset formats.
Notes: This is documented in Adobe Type 1 Font Format, which is available from http://partners.adobe.com/.

54.16.28 kCGFontPostScriptFormatType3 = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the PostScript font subset formats.
Notes: This is documented in PostScript Language Reference, 3rd edition, which is available from http://partners.adobe.com/.

54.16.29 kCGFontPostScriptFormatType42 = 42

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the PostScript font subset formats.
Notes: This is documented in Adobe Technical Note 5012, The Type 42 Font Format Specification, which is available from http://partners.adobe.com/.

54.16.30 kCGGlyphMax = 65534

MBS MacCG Plugin, Plugin Version: 14.2.

Function: The maximum value for a glyph.

54.17 class CGFunctionMBS

54.17.1 class CGFunctionMBS

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: CGFunction provides a general facility for defining and using callback functions that take an arbitrary number of floating-point input values, and pass back an arbitrary number of floating-point output values.

54.17.2 Blog Entries

- MBS Real Studio Plugins, version 13.1fc1

54.17.3 Blog Entries

- MBS Real Studio Plugins, version 13.1fc1

54.17.4 Methods

54.17.5 Create(domainDimension as Integer, domain as memoryblock, rangeDimension as Integer, range as memoryblock)

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Creates a Quartz function.
Notes:

Parameters

domainDimension: The number of inputs.
domain: An array of (2*domainDimension) floats used to specify the valid intervals of input values. For each k from 0 to (domainDimension - 1), domain [2*k] must be less than or equal to domain [2*k+1] , and the kth input value will be clipped to lie in the interval domain [2*k] input [k] domain [2*k+1] . If this parameter is nil, then the input values are not clipped.
rangeDimension: The number of outputs.
range: An array of (2*rangeDimension) floats that specifies the valid intervals of output values. For each k from 0 to (rangeDimension - 1), range [2*k] must be less than or equal to range [2*k+1] , and the kth output value will be clipped to lie in the interval range [2*k] output [k] range [2*k+1] . If this parameter is nil, then the output values are not clipped.

Returns the new Quartz function or nil on any error.

Available in Mac OS X version 10.2 and later.

54.17.6 Properties

54.17.7 Handle as Integer

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Handle to the CGFunctionRef.
Notes: (Read and Write property)

54.17.8 Events

54.17.9 Evaluate(Input as memoryblock, Output as memoryblock)

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: .

Function: Asks the CGFunction to calculate the values.
Notes: memoryblocks must be big enough.

54.18 class CGGradientMBS

54.18.1 class CGGradientMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: A gradient defines a smooth transition between colors across an area.
Notes:

The CGGradientMBS class, and the functions that operate on it, make creating and using radial and axial gradient fills an easy task. A CGGradient object has a color space, two or more colors, and a location for each color. The color space cannot be a pattern or indexed color space, otherwise it can be any Quartz color space (CGColorSpaceMBS).

Colors can be provided as component values (such as red, green, blue) or as Quartz color objects (CG-ColorMBS). In Quartz, component can vary from 0.0 to 1.0, designating the proportion of the component present in the color.

A location is a normalized value. When it comes time to paint the gradient, Quartz maps the normalized location values to the points in coordinate space that you provide.

If you want more precise control over gradients, or if your application runs in versions of Mac OS X that are earlier than v10.5, see CGShadingMBS.

Requires Mac OS X 10.5.

54.18.4 Methods

54.18.5 CreateWithColorComponents(colorSpace as CGColorSpaceMBS, components() as Double) as CGGradientMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a CGGradient object from a color space and the provided color components and locations.
Notes:

space: The color space to use for the gradient. You cannot use a pattern or indexed color space.
components: The color components for each color that defines the gradient. The components should be in the color space specified by space. If you are unsure of the number of components, you can call the function CGColorSpaceMBS.NumberOfComponents.

The number of items in this array should be the product of count and the number of components in the color space. For example, if the color space is an RGBA color space and you want to use two colors in the gradient (one for a starting location and another for an ending location), then you need to provide 8 values in components—red, green, blue, and alpha values for the first color, followed by red, green, blue, and alpha values for the second color.

locations: Optional, The location for each color provided in components. Each location must be a CGFloat value in the range of 0 to 1, inclusive. If 0 and 1 are not in the locations array, Quartz uses the colors provided that are closest to 0 and 1 for those locations.

If locations is not passed, the first color in colors is assigned to location 0, the last color incolors is assigned to location 1, and intervening colors are assigned locations that are at equal intervals in between.

Available in Mac OS X v10.5 and later.

- 54.18.6 CreateWithColorComponents(colorSpace as CGColorSpaceMBS, components() as Double, locations() as Double) as CGGradientMBS 10376

54.18.6 CreateWithColorComponents(colorSpace as CGColorSpaceMBS, components() as Double, locations() as Double) as CGGradientMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a CGGradient object from a color space and the provided color components and locations.
Example:

```
// put into paint event of window
dim c as CGContextMBS
if TargetCocoa then
```

```
c = GetCurrentCGContextMBS
else
c = window1.CGContextMBS
end if

dim locations() as Double = array(0.0, 0.6, 1.0)
dim components() as Double = array(1.0, 0.0, 0.0, 0.35, 0.0, 1.0, 0.0, 0.2, 0.0, 0.0, 1.0, 0.06) // Start color and End color

dim rgbColorspace as CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB
dim glossGradient as CGGradientMBS = CGGradientMBS.CreateWithColorComponents(rgbColorspace, components, locations)
'dim glossGradient as CGGradientMBS = CGGradientMBS.CreateWithColorComponents(rgbColorspace, components)

dim currentBounds as CGRectMBS = CGMakeRectMBS(0,0,g.Width,g.Height)

dim topCenter as CGPointMBS = CGMakePointMBS(g.width/2, 0.0)
dim midCenter as CGPointMBS = CGMakePointMBS(g.width/2, g.height)

c.SaveGState

// fill white
c.SetRGBFillColor 1.0, 1.0, 1.0, 1.0
c.FillRect currentBounds

// draw gradient
c.AddRect(currentBounds)
c.Clip
c.DrawLinearGradient(glossGradient, topCenter, midCenter, 0)
c.RestoreGState
c.Flush
```

Notes:

space: The color space to use for the gradient. You cannot use a pattern or indexed color space.
components: The color components for each color that defines the gradient. The components should be in the color space specified by space. If you are unsure of the number of components, you can call the function CGColorSpaceMBS.NumberOfComponents.

The number of items in this array should be the product of count and the number of components in the color space. For example, if the color space is an RGBA color space and you want to use two colors in the gradient (one for a starting location and another for an ending location), then you need to provide 8 values in components—red, green, blue, and alpha values for the first color, followed by red, green, blue, and alpha values for the second color.

locations: Optional, The location for each color provided in components. Each location must be a CGFloat value in the range of 0 to 1, inclusive. If 0 and 1 are not in the locations array, Quartz uses the colors provided that are closest to 0 and 1 for those locations.

If locations is not passed, the first color in colors is assigned to location 0, the last color incolors is assigned to location 1, and intervening colors are assigned locations that are at equal intervals in between.

Available in Mac OS X v10.5 and later.

- 54.18.5 CreateWithColorComponents(colorSpace as CGColorSpaceMBS, components() as Double) as CGGradientMBS 10376

54.18.7 CreateWithColors(colorSpace as CGColorSpaceMBS, colors() as CGColorMBS) as CGGradientMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a CGGradient object from a color space and the provided color objects and locations.
Example:

```
// put into window paint event
dim c as CGContextMBS
if TargetCocoa then
c = GetCurrentCGContextMBS
else
c = window1.CGContextMBS
end if

dim colors(-1) as CGColorMBS

colors.Append CGColorMBS.CreateGenericRGB(1.0, 0.0, 0.0, 0.35)
colors.Append CGColorMBS.CreateGenericRGB(0.0, 1.0, 0.0, 0.2)
colors.Append CGColorMBS.CreateGenericRGB(0.0, 0.0, 1.0, 0.06)

dim glossGradient as CGGradientMBS = CGGradientMBS.CreateWithColors(nil, colors)

dim topCenter as CGPointMBS = CGMakePointMBS(g.width/2, 0.0)
dim midCenter as CGPointMBS = CGMakePointMBS(g.width/2, g.height)

// fill white
c.SetRGBFillColor 1.0, 1.0, 1.0, 1.0
c.FillRect CGMakeRectMBS(0,0,g.Width,g.Height)

// gradient
```

```
dim currentBounds as CGRectMBS = CGMakeRectMBS(0,0,g.Width,g.Height)
c.SaveGState
c.AddRect(currentBounds)
c.Clip
c.DrawLinearGradient(glossGradient, topCenter, midCenter, 0)
c.RestoreGState

c.Flush
```

Notes:

space: The color space to use for the gradient. You cannot use a pattern or indexed color space. Can be nil.
colors: A non-empty array of CGColorMBS objects that should be in the color space specified by space. If space is not nil, each color will be converted (if necessary) to that color space and the gradient will drawn in that color space. Otherwise, each color will be converted to and drawn in the GenericRGB color space.
locations: Optional. The location for each color provided in colors; each location must be a CGFloat value in the range of 0 to 1, inclusive. If 0 and 1 are not in the locations array, Quartz uses the colors provided that are closest to 0 and 1 for those locations.

If locations is missing, the first color in colors is assigned to location 0, the last color incolors is assigned to location 1, and intervening colors are assigned locations that are at equal intervals in between.
The locations array should contain the same number of items as the colors array.

Available in Mac OS X v10.5 and later.

54.18.8 CreateWithColors(colorSpace as CGColorSpaceMBS, colors() as CGColorMBS, locations() as Double) as CGGradientMBS

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a CGGradient object from a color space and the provided color objects and locations.
Example:

```
// put into window paint event
dim c as CGContextMBS
if TargetCocoa then
c = GetCurrentCGContextMBS
else
c = window1.CGContextMBS
end if
```

```
dim locations() as Double = array(0.0, 0.8, 1.0)

dim colors(-1) as CGColorMBS

colors.Append CGColorMBS.CreateGenericRGB(1.0, 0.0, 0.0, 0.35)
colors.Append CGColorMBS.CreateGenericRGB(0.0, 1.0, 0.0, 0.2)
colors.Append CGColorMBS.CreateGenericRGB(0.0, 0.0, 1.0, 0.06)

dim glossGradient as CGGradientMBS = CGGradientMBS.CreateWithColors(nil, colors, locations)

dim topCenter as CGPointMBS = CGMakePointMBS(g.width/2, 0.0)
dim midCenter as CGPointMBS = CGMakePointMBS(g.width/2, g.height)

// fill white
c.SetRGBFillColor 1.0, 1.0, 1.0, 1.0
c.FillRect CGMakeRectMBS(0,0,g.Width,g.Height)

// gradient
dim currentBounds as CGRectMBS = CGMakeRectMBS(0,0,g.Width,g.Height)
c.SaveGState
c.AddRect(currentBounds)
c.Clip
c.DrawLinearGradient(glossGradient, topCenter, midCenter, 0)
c.RestoreGState

c.Flush
```

Notes:

space: The color space to use for the gradient. You cannot use a pattern or indexed color space. Can be nil.
colors: A non-empty array of CGColorMBS objects that should be in the color space specified by space. 54.18.9 Properties

54.18.10 Handle as Integer

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Handle to the CGGradientRef.
Notes: (Read and Write property)

54.18.11 Constants

54.18.12 kCGGradientDrawsAfterEndLocation = 2

MBS MacCG Plugin, Plugin Version: 11.2.

Function: One of the Gradient Drawing Options constants.
Notes:

The fill should extend beyond the ending location. The color that extends beyond the ending point is the solid color defined by the CGGradient object to be at location 1.
Available in Mac OS X v10.5 and later.

54.18.13 kCGGradientDrawsBeforeStartLocation = 1

MBS MacCG Plugin, Plugin Version: 11.2.

Function: One of the Gradient Drawing Options constants.
Notes:

The fill should extend beyond the starting location. The color that extends beyond the starting point is the solid color defined by the CGGradient object to be at location 0.
Available in Mac OS X v10.5 and later.

54.19 class CGImageDestinationMBS

54.19.1 class CGImageDestinationMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: A class to write CGImages.
Example:

```
dim logo as Picture = LogoMBS(500)
dim image as CGImageMBS = CGCreateImageMBS(logo)

dim dic as new Dictionary

// 10%
'dic.Value(CGImageDestinationMBS.kCGImageDestinationLossyCompressionQuality)=0.1

// 100%
dic.Value(CGImageDestinationMBS.kCGImageDestinationLossyCompressionQuality)=1.0

dim file as FolderItem = SpecialFolder.Desktop.Child("logo.jpg")
dim d as new CGImageDestinationMBS(file, "public.jpeg", 1)

d.AddImage(image, dic)

if d.Finalize then
MsgBox "Saved"
else
MsgBox "Failed to save."
end if
```

Notes:

CGImageDestination objects, available in Mac OS X v10.4 or later, abstract the data-writing task. An image destination can represent a single image or multiple images. It can contain thumbnail images as well as properties for each image.

The functions described in this reference can write data to three kinds of destinations: a file, an URL and a string. After creating a CGImageDestination object for the appropriate destination, you can add image data and set image properties. When you are finished adding data, call the function Finalize to write the image data and properties.

54.19.4 Methods

54.19.5 AddImage(image as CGImageMBS, properties as dictionary=nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Adds an image to an image destination.
Example:

```
dim inputfile as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// reading the picture
dim c as new CGImageSourceMBS(inputfile)
dim img as CGImageMBS = c.CreateImageAtIndex(0)
dim propertiesGlobal as Dictionary = c.Properties
dim propertiesImage as Dictionary = c.PropertiesAtIndex(0)

dim outputFile as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
dim d as new CGImageDestinationMBS(outputFile, "public.jpeg", 1)

// writing the picture and include metadata
d.SetProperties(propertiesGlobal)
d.AddImage(img, propertiesImage)
if d.FinalizeMT then
outputFile.Launch
else
MsgBox "Failed to write jpeg."
end if
```

Notes:

image: The image to add.
properties: An optional dictionary that specifies the properties of the added image.

For properties you can use those in the CGImageSourceMBS class, kCGImageDestinationLossyCompressionQuality and kCGImageDestinationBackgroundColor.

The function logs an error if you add more images than what you specified when you created the image destination.
Available in Mac OS X version 10.4 and later.

54.19.6 AddImageCF(image as CGImageMBS, properties as Variant = nil)

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Adds an image to an image destination.
Notes:

image: The image to add.
properties: An optional dictionary or CFDictionaryMBS that specifies the properties of the added image.

For properties you can use those in the CGImageSourceMBS class, kCGImageDestinationLossyCompressionQuality and kCGImageDestinationBackgroundColor.

The function logs an error if you add more images than what you specified when you created the image destination.
Available in Mac OS X version 10.4 and later.

54.19.7 AddImageFromSource(source as CGImageSourceMBS, index as Integer, options as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Adds an image from an image source to an image destination.
Notes:

source: An image source.
index: An index that specifies the location of the image in the image source. The index is zero-based.
properties: A dictionary that specifies properties to overwrite or add to the source image properties.

Available in Mac OS X version 10.4 and later.

54.19.8 AddImageFromSourceCF(source as CGImageSourceMBS, index as Integer, options as Variant = nil)

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Adds an image from an image source to an image destination.
Notes:

source: An image source.
index: An index that specifies the location of the image in the image source. The index is zero-based.
properties: A dictionary or CFDcitionaryMBS that specifies properties to overwrite or add to the source image properties.

Available in Mac OS X version 10.4 and later.

54.19.9 Constructor(file as folderitem, type as string, count as Integer = 1)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a location specified by a folderitem.
Example:

```
Dim p As Picture = LogoMBS(500)

// save as Photoshop

Dim image As CGImageMBS = CGImageMBS.CreateImage(p)
Dim file1 As FolderItem = SpecialFolder.Desktop.Child("test1.psd")
Dim dest As New CGImageDestinationMBS(file1, "com.adobe.photoshop-image", 1)

dest.AddImage(image, Nil)

If dest.Finalize Then
// MsgBox "Saved"
Else
MsgBox "Failed to save."
End If
```

Notes:

file: The file to write to. If the file already exists, the data at this location is overwritten.

type: The UTI (uniform type identifier) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On success the handle value is not zero.

Available in Mac OS X version 10.4 and later.
See also:

- 54.19.10 Constructor(type as string, count as Integer = 1) 10386
- 54.19.11 Constructor(url as string, type as string, count as Integer = 1) 10386

54.19.10 Constructor(type as string, count as Integer = 1)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a string.
Notes:

type: The uniform type identifier (UTI) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On success the handle is not zero.

Available in Mac OS X version 10.4 and later.
See also:

- 54.19.9 Constructor(file as folderitem, type as string, count as Integer = 1) 10385
- 54.19.11 Constructor(url as string, type as string, count as Integer = 1) 10386

54.19.11 Constructor(url as string, type as string, count as Integer = 1)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a location specified by a URL.
Notes:

url: The URL to write to. If the URL already exists, the data at this location is overwritten.

type: The UTI (uniform type identifier) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On success the handle value is not zero.

Available in Mac OS X version 10.4 and later.
See also:

- 54.19.9 Constructor(file as folderitem, type as string, count as Integer = 1) 10385
- 54.19.10 Constructor(type as string, count as Integer = 1) 10386

54.19.12 CreateWithData(type as string, count as Integer = 1) as CGImageDestinationMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a string.
Notes:

type: The uniform type identifier (UTI) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On error the function returns nil.

Available in Mac OS X version 10.4 and later.

54.19.13 CreateWithFile(file as folderitem, type as string, count as Integer = 1) as CGImageDestinationMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a location specified by a folderitem.
Example:

```
Dim p As Picture = LogoMBS(500)
```

```
// save as tiff

Dim image As CGImageMBS = CGImageMBS.CreateImage(p)
Dim file2 As FolderItem = SpecialFolder.Desktop.Child("test2.tif")
Dim dest As CGImageDestinationMBS = CGImageDestinationMBS.CreateWithFile(file2, "public.tiff", 1)

dest.AddImage(image, Nil)

If dest.Finalize Then
// MsgBox "Saved"
Else
MsgBox "Failed to save."
End If
```

Notes:

file: The file to write to. If the file already exists, the data at this location is overwritten.

type: The UTI (uniform type identifier) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On failure the function returns nil.

Available in Mac OS X version 10.4 and later.

54.19.14 CreateWithURL(url as string, type as string, count as Integer = 1) as CGImageDestinationMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image destination that writes to a location specified by a URL.
Notes:

url: The URL to write to. If the URL already exists, the data at this location is overwritten.

type: The UTI (uniform type identifier) of the resulting image file. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

count: The number of images (not including thumbnail images) that the image file will contain.

On error nil is returned.

Available in Mac OS X version 10.4 and later.

54.19.15 Data as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Makes a copy of the data.
Notes: The data is collected and after you called Finalize you can pick the data here.

54.19.16 Finalize as boolean

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Writes image data and properties to the data or URL associated with the image destination.
Example:

```
dim logo as Picture = LogoMBS(500)
dim image as CGImageMBS = CGCreateImageMBS(logo)

dim file as FolderItem = SpecialFolder.Desktop.Child("logo.png")
dim d as new CGImageDestinationMBS(file, "public.png", 1)

d.AddImage(image, nil)

if d.Finalize then
MsgBox "Saved"
else
MsgBox "Failed to save."
end if
```

Notes:

Returns true if the image is successfully written; false otherwise.

You must call this function or the output of the image destination will not be valid. After calling this function, no additional data can be added to the image destination.

Available in Mac OS X version 10.4 and later.

54.19.17 FinalizeMT as boolean

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Writes image data and properties to the data or URL associated with the image destination.
Notes:

Returns true if the image is successfully written; false otherwise.

You must call this function or the output of the image destination will not be valid. After calling this function, no additional data can be added to the image destination.

Available in Mac OS X version 10.4 and later.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

54.19.18 kCGImageDestinationBackgroundColor as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes:

The desired background color to composite against when writing an image that has an alpha component to a destination format that does not support alpha. If present, the value associated with this key must be a CGColorRef data type without an alpha component of its own. If not present, and if a background color is needed, a white color is used.

Available in Mac OS X v10.4 and later.

54.19.19 kCGImageDestinationDateTime as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: Updates the DateTime parameters of the image metadata. Only values present in the original image will updated. If present, the value should be a String or a Date. If String, the value must be in Exif DateTime or ISO 8601 DateTime format. This option is mutually exclusive with kCGImageDestinationMetadata.

54.19.20 kCGImageDestinationLossyCompressionQuality as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes:

The desired compression quality to use when writing to an image destination. If present, the value associated with this key must be a double in the range 0.0 to 1.0. A value of 1.0 specifies to use lossless compression if destination format supports it. A value of 0.0 implies to use maximum compression.

Available in Mac OS X v10.4 and later.

54.19.21 kCGImageDestinationMergeMetadata as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Example:

```
// Change rotation in an image file

// files
dim dpath as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim opath as folderitem = dpath.parent.Child("output.jpg")

// open source
dim imageSource as new cgimagesourcembs(dpath)

// read image
dim img as cgimagembs = imageSource.createimageatindex(0)

// global properties
dim globalprop as dictionary = imageSource.properties
// per image properties
dim p as Dictionary = imageSource.PropertiesAtIndex(0)

dim imageDest as new CGImageDestinationMBS(opath,"public.jpeg",1)

'const orientation = 1 // top left
const orientation = 3 // bottom right

// set globals
imageDest.SetProperties(globalprop)
```

```
// now set new orientation
p.value(imageDest.kCGImageDestinationOrientation) = orientation
p.value(imageDest.kCGImageDestinationMergeMetadata) = true

// change tiff dictionary, if present
dim dTIFF as Dictionary = p.lookup(imageSource.kCGImagePropertyTIFFDictionary, nil)
if dTIFF <>nil then
dTIFF.value(imageSource.kCGImagePropertyTIFFOrientation) = orientation
end if

// change iptc dictionary, if present
dim dIPTC as Dictionary = p.lookup(imageSource.kCGImagePropertyIPTCDictionary, nil)
if dIPTC <>nil then
dIPTC.value(imageSource.kCGImagePropertyIPTCImageOrientation) = orientation
end if

// write out image
imageDest.AddImage(img,p)
call imageDest.Finalize
```

Notes: If true, The metadata will be copied from the source and merged with the tags specified in kCGImageDestinationMetadata. If a tag does not exist in the source, it will be added. If the tag exists in the source, it will be updated. A metadata tag can be removed by setting the tag's value to nil. If present, the value of this key is a Boolean. The default is False.

54.19.22 kCGImageDestinationMetadata as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: Set the metadata tags for the image destination. If present, the value of this key is a CGImageMetadata. By default, all EXIF, IPTC, and XMP tags will be replaced. Use kCGImageDestinationMergeMetadata to merge the tags with the existing tags in the image source.

54.19.23 kCGImageDestinationOrientation as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Example:

```
// Change rotation in an image file
```

```
// files
dim dpath as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim opath as folderitem = dpath.parent.Child("output.jpg")

// open source
dim imageSource as new cgimagesourcembs(dpath)

// read image
dim img as cgimagembs = imageSource.createimageatindex(0)

// global properties
dim globalprop as dictionary = imageSource.properties
// per image properties
dim p as Dictionary = imageSource.PropertiesAtIndex(0)

dim imageDest as new CGImageDestinationMBS(opath,"public.jpeg",1)

'const orientation = 1 // top left
const orientation = 3 // bottom right

// set globals
imageDest.SetProperties(globalprop)

// now set new orientation
p.value(imageDest.kCGImageDestinationOrientation) = orientation
p.value(imageDest.kCGImageDestinationMergeMetadata) = true

// change tiff dictionary, if present
dim dTIFF as Dictionary = p.lookup(imageSource.kCGImagePropertyTIFFDictionary, nil)
if dTIFF <>nil then
dTIFF.value(imageSource.kCGImagePropertyTIFFOrientation) = orientation
end if

// change iptc dictionary, if present
dim dIPTC as Dictionary = p.lookup(imageSource.kCGImagePropertyIPTCDictionary, nil)
if dIPTC <>nil then
dIPTC.value(imageSource.kCGImagePropertyIPTCImageOrientation) = orientation
end if

// write out image
imageDest.AddImage(img,p)
call imageDest.Finalize
```

Notes: Updates the orientation in the image metadata. The image data itself will not be rotated. If present, the value should be a Integer from 1 to 8. This option is mutually exclusive with kCGImageDestination-

Metadata.

54.19.24 kCGImageMetadataShouldExcludeXMP as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the constant for the image destination properties.
Notes: XMP data will not be written to the destination. If used in conjunction with kCGImageDestinationMetadata, EXIF and/or IPTC tags will be preserved, but an XMP packet will not be written to the file. If present, the value for this key is a Boolean. The default is False.

54.19.25 SetProperties(options as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Applies one or more properties to all images in an image destination.
Example:

```
dim inputfile as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// reading the picture
dim c as new CGImageSourceMBS(inputfile)
dim img as CGImageMBS = c.CreateImageAtIndex(0)
dim propertiesGlobal as Dictionary = c.Properties
dim propertiesImage as Dictionary = c.PropertiesAtIndex(0)

dim outputFile as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
dim d as new CGImageDestinationMBS(outputFile, "public.jpeg", 1)

// writing the picture and include metadata
d.SetProperties(propertiesGlobal)
d.AddImage(img, propertiesImage)
if d.FinalizeMT then
outputFile.Launch
else
MsgBox "Failed to write jpeg."
end if
```

Notes: Available in Mac OS X version 10.4 and later.

54.19.26 SetPropertiesCF(options as Variant)

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Applies one or more properties to all images in an image destination.
Notes:

Available in Mac OS X version 10.4 and later.
Options can be a Dictionary or CFDictionaryMBS.

54.19.27 TypeIdentifiers as string()

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns an array of the uniform type identifiers (UTIs) that are supported for image destinations.
Example:

```
dim s(-1) as string = CGImageDestinationMBS.TypeIdentifiers

MsgBox Join(s,EndOfLine)

// shows on Mac OS X 10.5:
//
// public.png
// public.jpeg
// com.compuserve.gif
// public.jpeg-2000
// public.tiff
// com.adobe.photoshop-image
// com.adobe.pdf
// com.microsoft.bmp
// com.apple.pict
// com.truevision.tga-image
// com.sgi.sgi-image
// com.ilm.openexr-image
```

Notes:

Returns an array of the UTIs that are supported for image destinations. See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs that can be returned.

Available in Mac OS X version 10.4 and later.

54.19.28 Properties

54.19.29 Handle as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The internal reference.
Notes: (Read and Write property)

54.20 class CGImageMBS

54.20.1 class CGImageMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics image.
Notes:

If the release property is true, the destructor of this class will release the image reference.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

54.20.6 Methods

54.20.7 Constructor

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The private constructor.

54.20.8 Copy as CGImageMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: Creates a copy of a bitmap image.
See also:

- 54.20.9 Copy(r as CGRectMBS) as CGImageMBS 10398

54.20.9 Copy(r as CGRectMBS) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: Creates a copy of a bitmap image.
See also:

- 54.20.8 Copy as CGImageMBS 10398

54.20.10 CopyWithColorSpace(profile as CGColorSpaceMBS) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns a copy of the image with the new Colorspace included.
Example:

```
// load a picture
dim f as FolderItem = SpecialFolder.Desktop.Child("ColorSpin.jpg")
dim pic as Picture = picture.Open(f)

// open printer
dim g as Graphics = OpenPrinterDialog
if g = nil then Return

// draw
g.DrawPicture pic, 0, 0

// now load again
dim ImageSource as new CGImageSourceMBS(f)
dim img as CGImageMBS = ImageSource.CreateImageAtIndex(0)
dim cs as CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB

// copy with replacing colorspace
img = img.CopyWithColorSpace(cs)

// and draw
# If XojoVersion >= 2019.02 Then
Dim p As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Dim c As CGContextMBS = CGContextMBS.contextWithCGContext(p)
# Else
Dim h As Integer = g.Handle(g.HandleTypeCGContextRef)
Dim c As CGContextMBS = CGContextMBS.contextWithCGContext(h)
# EndIf
dim r as CGRectMBS = CGMakeRectMBS(0, 0, img.Width, img.Height)

c.DrawPicture(img, r)
c.Flush
```

Notes:

profile must be a CGColorSpaceMBS.
Requires Mac OS X 10.3.

54.20.11 CopyWithMask(mask as CGImageMBS) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: reates a bitmap image from an existing image and an image mask.
Notes:

Parameters:

self: The image to apply the mask parameter to. This image must not be an image mask and may not have an image mask or masking color associated with it.

mask: A mask. If the mask is an image, it must be in the DeviceGray color space, must not have an alpha component, and may not itself be masked by an image mask or a masking color. If the mask is not the same size as the image specified by the image parameter, then Quartz scales the mask to fit the image.

Return Value: An image created by masking image with mask. You are responsible for releasing this object by calling CGImageRelease.

The resulting image depends on whether the mask parameter is an image mask or an image. If the mask parameter is an image mask, then the source samples of the image mask act as an inverse alpha value. That is, if the value of a source sample in the image mask is S, then the corresponding region in image is blended with the destination using an alpha value of (1-S). For example, if S is 1, then the region is not painted, while if S is 0, the region is fully painted.

If the mask parameter is an image, then it serves as an alpha mask for blending the image onto the destination. The source samples of mask' act as an alpha value. If the value of the source sample in mask is S, then the corresponding region in image is blended with the destination with an alpha of S. For example, if S is 0, then the region is not painted, while if S is 1, the region is fully painted.

54.20.12 CreateImage(pic as picture) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGImageMBS from the given images.
Example:

```
dim c as CGImageMBS
dim pic, mask as Picture
// get picture and mask

c = CGImageMBS.CreateImage(pic)
if c<>Nil then
// go on
```

```
end if
```

Notes: If the image has a mask, it is used.
See also:

- 54.20.13 CreateImage(pic as picture, mask as picture) as CGImageMBS 10401

54.20.13 CreateImage(pic as picture, mask as picture) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGImageMBS from the given images.
Example:

```
dim c as CGImageMBS
dim pic, mask as Picture
// get picture and mask

c = CGImageMBS.CreateImage(pic, mask)
if c<>Nil then
// go on
end if
```

Notes:

The mask is taken from the second image.
With 11.3 plugins we are deprecating to pass a mask. The plugin prefers to simply take the mask or alpha channel of the picture itself.
See also:

- 54.20.12 CreateImage(pic as picture) as CGImageMBS 10400

54.20.14 CreateImageFromJPEGDataProvider(dataprovider as Variant, decode as memoryblock, shouldInterpolate as boolean, intent as Integer) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates a new CGImage with JPEG data.
Example:

```
// Shows moon.jpg from the desktop folder
// shows in the window title if i,p or u is nil.
```

```
Sub Mainwindow.Paint(g As Graphics)
dim f as FolderItem
dim p as CGDataProviderMBS
dim i as CGImageMBS

f=SpecialFolder.Desktop.Child("moon.jpg")
p=CGDataProviderMBS.CreateWithFile(f)
if p=nil then
Title="p=nil"
else
i = CGImageMBS.CreateImageFromJPEGDataProvider(p,nil,true,0)

if i=nil then
Title="i=nil"
else
window1.CGContextMBS.DrawPicture i,CGMakeRectMBS(0,0,i.Width,i.Height)
end if
end if

End Sub
```

Notes:

Parameters:

dataprovider:
A reference to a data provider supplying JPEG-encoded data.

decode:
Pass the decode array for the image. In the decode array, for each color component in the source color space, you provide a pair of values denoting the upper and lower limits of a range. For example, the decode array for a source image in the RGB color space would contain six entries total, consisting of one pair each for red, green, and blue. When the image is rendered, Quartz uses a linear transform to map the original component value into a relative number within your designated range that is appropriate for the destination color space. If you do not want to allow remapping of the image's color values, pass nil for the decode array. The memoryblock for the array needs to be filled with double values.

shouldInterpolate:
Pass true if interpolation should occur; otherwise, pass false . The interpolation setting specifies whether Quartz should apply a pixel-smoothing algorithm to the image. If you pass false , the image may appear jagged or pixelated when drawn on an output device with higher resolution than the image data.

intent:
Pass a CGColorRenderingIntent value specifying how Quartz should display colors in the image that are not

located within the current color space of the graphics context. The rendering intent determines the exact method used to map colors from one color space to another.

54.20.15 CreateImageFromPNGDataProvider(dataprovider as Variant, decode as memoryblock, shouldInterpolate as boolean, intent as Integer) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates a new CGImage with PNG data.
Notes:

Parameters:

dataprovider:
A reference to a data provider supplying JPEG-encoded data.

decode:
Pass the decode array for the image. In the decode array, for each color component in the source color space, you provide a pair of values denoting the upper and lower limits of a range. For example, the decode array for a source image in the RGB color space would contain six entries total, consisting of one pair each for red, green, and blue. When the image is rendered, Quartz uses a linear transform to map the original component value into a relative number within your designated range that is appropriate for the destination color space. If you do not want to allow remapping of the image's color values, pass nil for the decode array. The memoryblock for the array needs to be filled with double values.

shouldInterpolate:
Pass true if interpolation should occur; otherwise, pass false . The interpolation setting specifies whether Quartz should apply a pixel-smoothing algorithm to the image. If you pass false , the image may appear jagged or pixelated when drawn on an output device with higher resolution than the image data.

intent:
Pass a CGColorRenderingIntent value specifying how Quartz should display colors in the image that are not located within the current color space of the graphics context. The rendering intent determines the exact method used to map colors from one color space to another.

54.20.16 CreateImageWithFile(file as folderitem) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Opens a file as CGImage object.
Notes: Returns nil on any error.

54.20.17 CreateImageWithHandle(handle as Integer) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Creates image from a CGImageRef handle value.
Notes: Internally the CGImageMBS retains this reference and releases it in destructor.

54.20.18 DataProvider as Variant

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The data provider used for the image.
Notes:

Value is a CGDataProviderMBS object.
Returns nil on any error.

54.20.19 DecodeArray as memoryblock

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The decode array used for the image.
Notes:

A memoryblock with an array of double variables.
Returns nil on any error.

54.20.20 JPEGData(Compression as Integer = 90) as MemoryBlock

MBS MacCG Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns image compressed as JPEG file.
Notes:

Compression defines the compression level from 0 to 100.
Returns nil on any error.

54.20.21 Picture(ColorSpace as CGColorSpaceMBS = nil) as Picture

MBS MacCG Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates a copy of the CGImage as a picture.
Example:

```
// get CGImage
dim f as FolderItem = SpecialFolder.Desktop.Child("bild.jpg")
dim c as CGImageMBS = CGImageMBS.CreateImageWithFile(f)
// get picture
dim p as Picture = c.Picture
// save as jpeg
dim d as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
p.Save(d, p.SaveAsJPEG, 80)
```

Notes:

Colorspace: the optional CoreGraphcis Colorspace to use for the bitmap conversion (CGColorSpaceMBS class).
Returns nil on any error.

54.20.22 PictureScaled(OutputWidth as Integer, OutputHeight as Integer, ColorSpace as CGColorSpaceMBS = nil) as Picture

MBS MacCG Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates a copy of the CGImage as a picture scaled.
Example:

```
// get CGImage
dim f as FolderItem = SpecialFolder.Desktop.Child("bild.jpg")
dim c as CGImageMBS = CGImageMBS.CreateImageWithFile(f)
// get picture
dim p as Picture = c.PictureScaled(640,480)
// save as jpeg
dim d as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
p.Save(d, p.SaveAsJPEG, 80)
```

Notes:

Colorspace: the optional CoreGraphcis Colorspace to use for the bitmap conversion (CGColorSpaceMBS class).
Returns nil on any error.

If output width and height are zero, we use the image sizes.

54.20.23 PNGData as MemoryBlock

MBS MacCG Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns image compressed as PNG file.
Notes: Returns nil on any error.

54.20.24 ReleaseHandle

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Decrements the retain count of a CGImageRef.
Notes:

Each retain must have a release. Too many releases and your app will crash, too many retains and it will leak memory.
Use only if you really know what you are doing.

54.20.25 RetainHandle

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Increments the retain count of a CGImageRef.
Notes:

Each retain must have a release. Too many releases and your app will crash, too many retains and it will leak memory.
Use only if you really know what you are doing.

54.20.26 Properties

54.20.27 AlphaInfo as Integer

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns the alpha channel information for a bitmap image.
Notes:

A CGImageAlphaInfo constant that specifies (1) whether the bitmap contains an alpha channel, (2) where the alpha bits are located in the image data, and (3) whether the alpha value is premultiplied. For possible values, see Constants. The function returns kCGImageAlphaNone if the image parameter refers to an image mask.
(Read only property)

54.20.28 BitmapInfo as Integer

MBS MacCG Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns the bitmap information for a bitmap image.
Notes:

This function returns a constant that specifies:

The type of bitmap data—floating point or integer. You use the constant kCGBitmapFloatComponents to extract this information.

Whether an alpha channel is in the data, and if so, how the alpha data is stored. You use the constant kCGBitmapAlphaInfoMask to extract the alpha information. Alpha information is specified as one of the constants listed in Alpha Information for Images.
(Read only property)

54.20.29 BitsPerComponent as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the number of bits/component of the image.
Notes: (Read only property)

54.20.30 BitsPerPixel as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the number of bits/pixel of image.
Notes: (Read only property)

54.20.31 BytesPerRow as Integer

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: Returns the number of bytes allocated for a double row of a bitmap image.
Notes: (Read only property)

54.20.32 ColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The color space used for the image.
Example:

```
// get a picture file
dim file as FolderItem = SpecialFolder.Desktop.Child("sylwia.jpg")
// get image source
dim source as new CGImageSourceMBS(file)
// read image
dim image as CGImageMBS = source.CreateImageAtIndex(0)
// get Color space from image
dim profile as CGColorSpaceMBS = image.ColorSpace
// get ICC profile data
dim ICCProfile as string = profile.ICCProfile
// and parse it with LCMS and show name
dim LCMSProfile as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromString(ICCProfile)
MsgBox LCMSProfile.Name
```

Notes:

Value is a CGColorSpaceMBS.
Returns nil on any error.
(Read only property)

54.20.33 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The handle for this image.
Notes:

Handle is a CGImageRef.
(Read and Write property)

54.20.34 height as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the image's height.
Notes:

Returns 0 on error.

(Read only property)

54.20.35 ImageIsMask as boolean

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns true if the image is an image mask, false otherwise.
Notes: (Read only property)

54.20.36 RenderingIntent as Integer

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the rendering intent of the image.
Notes:

Constants:

kCGRenderingIntentDefault	0
kCGRenderingIntentAbsoluteColorimetric	1
kCGRenderingIntentRelativeColorimetric	2
kCGRenderingIntentPerceptual	3
kCGRenderingIntentSaturation	4

(Read only property)

54.20.37 RetainCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the retain count of the CGImageRef.
Notes:

This is useful for debugging.
The retain count is for the CGImageRef, not the CGImageMBS object.
(Read only property)

54.20.38 ShouldInterpolate as boolean

MBS MacCG Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the interpolation parameter of image.
Notes:

True if the image should use interpolation.
(Read only property)

54.20.39 width as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the image's width.
Notes:

Returns 0 on error.
(Read only property)

54.20.40 Constants

54.20.41 kCGBitmapAlphaInfoMask = & h1F

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the bitmap info values.
Notes: The alpha information mask. Use this to extract alpha information that specifies whether a bitmap contains an alpha channel and how the alpha channel is generated.

54.20.42 kCGBitmapByteOrder16Big = 12288

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the bitmap info values.
Notes: 16-bit, big endian format.

54.20.43 kCGBitmapByteOrder16Little = 4096

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the bitmap info values.
Notes: 16-bit, little endian format.

54.20.44 kCGBitmapByteOrder32Big = 16384

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the bitmap info values.
Notes: 32-bit, big endian format.

54.20.45 kCGBitmapByteOrder32Little = 8192

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the bitmap info values.
Notes: 32-bit, little endian format.

54.20.46 kCGBitmapByteOrderDefault = 0

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the bitmap info values.
Notes: The default byte order.

54.20.47 kCGBitmapByteOrderMask = & h7000

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the bitmap info values.
Notes: The byte ordering of pixel formats.

54.20.48 kCGBitmapFloatComponents = 256

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the bitmap info values.
Notes: The components of a bitmap are floating-point values.

54.20.49 kCGImageAlphaFirst = 4

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the alpha info values.
Notes: The alpha component is stored in the most significant bits of each pixel. For example, non-premultiplied ARGB.

54.20.50 kCGImageAlphaLast = 3

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the alpha info values.
Notes: The alpha component is stored in the least significant bits of each pixel. For example, non-premultiplied RGBA.

54.20.51 kCGImageAlphaNone = 0

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the alpha info values.
Notes: There is no alpha channel. If the total size of the pixel is greater than the space required for the number of color components in the color space, the least significant bits are ignored. This value is equivalent to kCGImageAlphaNoneSkipLast.

54.20.52 kCGImageAlphaNoneSkipFirst = 6

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the alpha info values.
Notes: There is no alpha channel. If the total size of the pixel is greater than the space required for the number of color components in the color space, the most significant bits are ignored.

54.20.53 kCGImageAlphaNoneSkipLast = 5

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the alpha info values.
Notes: There is no alpha channel. If the total size of the pixel is greater than the space required for the number of color components in the color space, the least significant bits are ignored. This value is equivalent to kCGImageAlphaNone.

54.20.54 kCGImageAlphaOnly = 7

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the alpha info values.
Notes: There is no color data, only an alpha channel.

54.20.55 kCGImageAlphaPremultipliedFirst = 2

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the alpha info values.
Notes: The alpha component is stored in the most significant bits of each pixel and the color components have already been multiplied by this alpha value. For example, premultiplied ARGB.

54.20.56 kCGImageAlphaPremultipliedLast = 1

MBS MacCG Plugin, Plugin Version: 15.3.

Function: One of the alpha info values.
Notes: The alpha component is stored in the least significant bits of each pixel and the color components have already been multiplied by this alpha value. For example, premultiplied RGBA.

54.21 class CGImageMetadataMBS

54.21.1 class CGImageMetadataMBS

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The class for a tag container.

54.21.2 Blog Entries

- MBS Xojo Plugins, version 18.6pr1
- MBS Xojo Plugins, version 18.5pr8

54.21.3 Blog Entries

- MBS Xojo Plugins, version 18.6pr1
- MBS Xojo Plugins, version 18.5pr8

54.21.4 Methods

54.21.5 Constructor

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates an empty metadata object.
See also:

- 54.21.6 Constructor(metadata as CGImageMetadataMBS) 10414

54.21.6 Constructor(metadata as CGImageMetadataMBS)

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Copy constructor.
Notes: Creates a copy of the metadata.
See also:

- 54.21.5 Constructor 10414

54.21.7 CreateFromXMPData(data as MemoryBlock) as CGImageMetadataMBS

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a collection of CGImageMetadataTags from a block of XMP data.
Notes:

Converts XMP data into a collection of metadata tags.
The data must be a complete XMP tree. XMP packet headers (<?xpacket .. ?>) are supported.

data: The XMP data.

Returns a collection of CGImageMetadata tags. Returns nil if an error occurred.

54.21.8 CreateXMPData(options as Dictionary = nil) as MemoryBlock

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Serializes the CGImageMetadataRef to XMP data.
Notes:

This converts all of the metadata tags to a block of XMP data. Common uses include creating sidecar files that contain metadata for image formats that do not support embedded XMP, or cannot be edited due to other format restrictions (such as proprietary RAW camera formats).

options: should be nil. Options are currently not used, but may be used in future release.

Returns a Memoryblock containing an XMP representation of the metadata. Returns nil if an error occurred.

54.21.9 kCFErrorDomainCGImageMetadata as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Error domain for all errors originating in ImageIO for CGImageMetadata APIs.

54.21.10 kCGImageMetadataEnumerateRecursively as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A key for the 'options' of Tags function.
Notes: If present, the value should be a CFBoolean. If true, tags will be enumerated recursively, if false,

only the direct children of 'rootPath' will be enumerated. The default is non-recursive.

54.21.11 kCGImageMetadataNamespaceDublinCore as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: Dublin Core

54.21.12 kCGImageMetadataNamespaceExif as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: Exif

54.21.13 kCGImageMetadataNamespaceExifAux as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: Exif Aux

54.21.14 kCGImageMetadataNamespaceExifEX as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: ExifEX

54.21.15 kCGImageMetadataNamespaceIPTCCore as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: IPTC Core

54.21.16 kCGImageMetadataNamespaceIPTCExtension as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: IPTC Extension

54.21.17 kCGImageMetadataNamespacePhotoshop as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: Photoshop

54.21.18 kCGImageMetadataNamespaceTIFF as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: TIFF

54.21.19 kCGImageMetadataNamespaceXMPBasic as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: XMP Basic

54.21.20 kCGImageMetadataNamespaceXMPRights as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the metadata namespaces.
Notes: XMP Rights

54.21.21 kCGImageMetadataPrefixDublinCore as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: Dublin Core

54.21.22 kCGImageMetadataPrefixExif as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: Exif

54.21.23 kCGImageMetadataPrefixExifAux as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: Exif Aux

54.21.24 kCGImageMetadataPrefixExifEX as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: Exif EX

54.21.25 kCGImageMetadataPrefixIPTCCore as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: IPTC Core

54.21.26 kCGImageMetadataPrefixIPTCExtension as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: IPTC Extension

54.21.27 kCGImageMetadataPrefixPhotoshop as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: Photoshop

54.21.28 kCGImageMetadataPrefixTIFF as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: TIFF

54.21.29 kCGImageMetadataPrefixXMPBasic as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: XMP Basic

54.21.30 kCGImageMetadataPrefixXMPRights as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the common prefix names.
Notes: XMP Rights

54.21.31 StringValueWithPath(parent as CGImageMetadataTagMBS = nil, path as String) as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Searches for a specific tag in a CGImageMetadataRef and returns its string value.
Notes:

This is a convenience method for searching for a tag at path and extracting the string value.

parent: A parent tag. If nil, the path is relative to the root of the metadata (i.e. it is not a child of another property).
path: A string with the path to the desired tag. Please consult the documentation of TagWithPath for

information about path syntax.

Returns a string from a CGImageMetadataTagMBS located at 'path'. The tag must be of type kTypeString or kTypeAlternateText.
For AlternateText tags, the element with the "x-default" language qualifier will be returned. For other types, "" will be returned.

54.21.32 TagMatchingImageProperty(dictionaryName as String, propertyName as String) as Variant

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Searches for a specific CGImageMetadataTag matching an image property constant.
Notes:

Provides a bridge for values from CGImageCopyPropertiesAtIndex, simplifying access for properties defined in EXIF and IPTC standards, which have no notion of namespaces, prefixes, or XMP property types.

Metadata: Working Group guidance is factored into the mapping of CGImage properties to XMP compatible metadata tags.

For example, kCGImagePropertyExifDateTimeOriginal will get the value of the corresponding XMP tag, which is photoshop:DateCreated. Note that property values will still be in their XMP forms, such as "YYYY-MM-DDThh:mm:ss" for DateTime, rather than the EXIF or IPTC DateTime formats.

dictionaryName: the metadata subdictionary to which the image property belongs, such as kCGImagePropertyExifDictionary or kCGImagePropertyIPTCDictionary. Not all dictionaries and properties are supported at this time.
propertyName: the name of the property. This must be a defined property constant corresponding to the 'dictionaryName'. For example, kCGImagePropertyTIFFOrientation, kCGImagePropertyExifDateTimeOriginal, or kCGImagePropertyIPTCKeywords. A warning will be logged if the CGImageProperty is unsupported by CGImageMetadata.

Returns a CGImageMetadataTagRef with the appropriate namespace, prefix, tag name, and XMP value for the corresponding CGImageProperty. Returns nil if the property could not be found.

54.21.33 Tags as CGImageMetadataTagMBS()

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Obtain an array of tags from a metadata object.
See also:

• 54.21.34 Tags(rootPath as string, options as Dictionary = nil) as CGImageMetadataTagMBS() 10421

54.21.34 Tags(rootPath as string, options as Dictionary = nil) as CGImageMetadataTagMBS()

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the tags matching the path and options.
Notes:

This function iterates over all of the tags in a metadata to collect the matching one. The default behavior iterates over all top-level tags in the metadata.

rootPath: Iteration will occur for all children of the tag matching the root path. Please refer to TagWithPath for information about path syntax. If an empty string, the search will be executed for all top-level tags in the metadata container.
options: A dictionary of options for iterating through the tags.
Currently the only supported option is kCGImageMetadataEnumerateRecursively, which should be set to a boolean.

Returns array with found items.
See also:

• 54.21.33 Tags as CGImageMetadataTagMBS() 10420

54.21.35 TagWithPath(parent as CGImageMetadataTagMBS = nil, path as string) as Variant

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Searches for a specific CGImageMetadataTagMBS in a CGImageMetadataMBS.
Notes:

This is the primary function for clients to obtain specific metadata properties from an image. The 'path' mechanism provides a way to access both simple top-level properties, such as Date & Time, or complex deeply-nested properties with ease.

parent: A parent tag. If nil, the path is relative to the root of the metadata (i.e. it is not a child of another property). If the parent is provided, the effective path will be the concatenation of the parent's path and the 'path' parameter. This is useful for accessing array elements or structure fields inside nested tags.

path: A string representing a path to the desired tag. Paths consist of a tag prefix (i.e. "exif") joined with a tag name (i.e. "Flash") by a colon (":"), such as "exif:Flash".
Elements of ordered and unordered arrays are accessed via 0-based indices inside square [ ] brackets.
Elements of alternate-text arrays are accessed by an RFC 3066 language code inside square [ ] brackets.

Fields of a structure are delimited by a period, '.'.
Qualifiers are delimited by the '?' character. Only tags with string values (kTypeString) are allowed to have qualifiers - arrays and structures may not contain qualifiers.

If parent is nil, a prefix must be specified for the first tag. Prefixes for all subsequent tags are optional. If unspecified, the prefix is inherented from the nearest parent tag with a prefix. Custom prefixes must be registered using RegisterNamespaceForPrefix prior to use in any path-based functions.

Examples:

- 'path' = "xmp:CreateDate"
- 'path' = "exif:Flash.Fired"
- 'parent' = tag at path "exif:Flash", path = "exif:Fired" (equivilent to previous)
- 'path' = "exif:Flash.RedEyeMode"
- 'path' = "dc:title"
- 'path' = "dc:subject"
- 'path' = "dc:subject [2] "
- 'parent' = tag at path "dc:subject", path = " [2] " (equivilent to previous
- 'path' = "dc:description [x-default]
- 'path' = "dc.description [de]
- 'path' = "dc.description [fr]
- 'path' = "foo:product
- 'path' = "foo:product?bar:manufacturer

Returns a CGImageMetadataTagMBS matching 'path', or nil if no match is found. The copy of the tag's value is shallow. Tags copied from an immutable CGImageMetadataMBS are also immutable. Because this function returns a copy of the tag's value, any modification of the tag's value must be followed by a SetTagWithPath to commit the change to the metadata container.

54.21.36 Properties

54.21.37 Handle as Integer

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

54.21.38 Constants

54.21.39 kErrorBadArgument = 2

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Bad argument

54.21.40 kErrorConflictingArguments = 3

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Conflicting Arguments

54.21.41 kErrorPrefixConflict = 4

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Prefix conflict

54.21.42 kErrorUnknown = 0

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Unknown error

54.21.43 kErrorUnsupportedFormat = 1

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Unsupported Format

54.22 class CGImageMetadataTagMBS

54.22.1 class CGImageMetadataTagMBS

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The class for a metadata tag.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

54.22.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr8

54.22.3 Blog Entries

- MBS Xojo Plugins, version 18.5pr8

54.22.4 Methods

54.22.5 Constructor

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

54.22.6 Create(XMLNS as String, Prefix as String, Name as String, Type as Integer, Value as Variant) as CGImageMetadataTagMBS

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a new CGImageMetadataTagMBS object.
Notes:

xmlns: The namespace for the tag. The value can be a common XMP namespace defined above, such as kCGImageMetadataNamespaceExif, or a string with a custom namespace URI. Custom namespaces must be a valid XML namespace. By convention, namespaces should end with either '/' or '# '. For example, exif uses the namespace "http://ns.adobe.com/exif/1.0/".
prefix: An abbreviation for the XML namespace. The value can be empty if the namespace is defined as a constant. Custom prefixes must be a valid XML name. For example, the prefix used for "http://ns.adobe.com/exif/1.0/" is "exif". The XMP serialization of the tag will use the prefix. Prefixes are also important for path-based metadata functions, such as StringValueWithPath or SetValueWithPath.
name: The name of the tag. It must be a valid XMP name.

type: The type of the tag's value. Must be a kType* constant.
value: The value of the tag. Allowable types include string, double, integer, boolean, array, and dictionary. The type of 'value' must correspond to the 'type'. The elements of an array must be either a string or tags itself. The keys of a CFDictionary must be string with valid XMP names. The values of a dictionary must be either strings or tags. A shallow copy of the value is stored in the tag. Therefore, modifying a mutable value after the tag is created will not affect the tag's value.

Returns a new CGImageMetadataTagMBS object. Returns nil if a tag could not be created with the specified parameters.

54.22.7 Qualifiers as CGImageMetadataTagMBS()

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Return a copy of the tag's qualifiers.
Notes:

XMP allows properties to contain supplemental properties called qualifiers. Qualifiers are themselves CGImageMetadataTagMBS objects with their own namespace, prefix, name, and value. A common use is the xml:lang qualifier for elements of an alternate-text array.

Returns a copy of the array of qualifiers. Elements of the array are CGImageMetadataTagMBS. Returns nil if the tag does not have any qualifiers.

54.22.8 Properties

54.22.9 Handle as Integer

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

54.22.10 Name as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the tag's name.
Notes: (Read only property)

54.22.11 Namespace_ as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the tag's namespace.
Notes:

As Namespace is a reserved word in Xojo, we need to add a _ to get it to compile.
(Read only property)

54.22.12 Prefix as String

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the tag's prefix.
Notes: (Read only property)

54.22.13 Type as Integer

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Get the type of the tag.
Notes:

Returns a kType constant for the tag.
This is primarily used to determine how to interpret the tag's value.
(Read only property)

54.22.14 Value as Variant

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns a shallow copy of the tag's value.
Notes:

This function should only be used to read the tag's value.
TagWithPath returns the tag (including the tag's value). Therefore mutating a tag's value returned from this function may not actually mutate the value in the CGImageMetadata. It is recommended to create a new tag followed by SetTagWithPath, or use SetValueWithPath to mutate a metadata value.
(Read only property)

54.22.15 Constants

54.22.16 kTypeAlternateArray = 4

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the type constants.
Notes: An ordered array where all elements are alternates for the same value. Serialized in XMP as <rdf:Alt>.

54.22.17 kTypeAlternateText = 5

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the type constants.
Notes: A special case of an alternate array where all elements are different localized strings for the same value. Serialized in XMP as an alternate array of strings with xml:lang qualifiers.

54.22.18 kTypeArrayOrdered = 3

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the type constants.
Notes: An array where order is preserved. Serialized in XMP as <rdf:Seq>.

54.22.19 kTypeArrayUnordered = 2

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the type constants.
Notes: An array where order does not matter. Serialized in XMP as <rdf:Bag>.

54.22.20 kTypeDefault = 0

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the type constants.
Notes: The type is taken from the passed value for new tags.

54.22.21 kTypeInvalid = -1

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the type constants.
Notes: Invalid.

54.22.22 kTypeString = 1

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the type constants.
Notes: A string value. Number and boolean values will be converted to a string.

54.22.23 kTypeStructure = 6

MBS MacCG Plugin, Plugin Version: 18.5.

Function: One of the type constants.
Notes: A collection of keys and values. Unlike array elements, fields of a structure may belong to different namespaces.

54.23 class CGImageSourceMBS

54.23.1 class CGImageSourceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The CoreGraphics class for image loading.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim c as new CGImageSourceMBS(file)
dim img as CGImageMBS = c.CreateImageAtIndex(0)

Backdrop=img.Picture
```

Notes:

CGImageSource objects, available in Mac OS X v10.4 or later, abstract the data-reading task. An image source can read image data from a URL, a file or a string.

After creating a CGImageSource object for the appropriate source, you can obtain images, thumbnails, image properties, and other image information using CGImageSource functions.

54.23.6 Methods

54.23.7 Constructor(data as string, options as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image source that reads from a string.
Notes:

data: The data string to read from.
options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

On success the handle value is not zero.
Available in Mac OS X version 10.4 and later.
See also:

- 54.23.8 Constructor(file as folderitem, options as dictionary = nil) 10431
- 54.23.9 Constructor(options as dictionary = nil) 10431

54.23.8 Constructor(file as folderitem, options as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image source that reads from a location specified by a file.
Notes:

url: The URL to read from.

options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

On success the handle value is not zero.

Available in Mac OS X version 10.4 and later.
See also:

- 54.23.7 Constructor(data as string, options as dictionary = nil) 10430
- 54.23.9 Constructor(options as dictionary = nil) 10431

54.23.9 Constructor(options as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Create an incremental image source.
Notes:

options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

Returns an image source object.

The constructor creates an empty image source container to which you can add data later by calling the function UpdateData. You don't provide data when you call this function.

An incremental image is an image that is created in chunks, similar to the way large images viewed over the web are loaded piece by piece.

Available in Mac OS X version 10.4 and later.
See also:

- 54.23.7 Constructor(data as string, options as dictionary = nil) 10430
- 54.23.8 Constructor(file as folderitem, options as dictionary = nil) 10431

54.23.10 CreateImageAtIndex(index as Integer, options as dictionary = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a CGImage object for the image data associated with the specified index in an image source.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim c as new CGImageSourceMBS(file)
dim img as CGImageMBS = c.CreateImageAtIndex(0)

Backdrop=img.Picture
```

Notes:

index: The index that specifies the location of the image. The index is zero-based.

options: A dictionary that specifies additional creation options.

Returns a CGImage object.

Available in Mac OS X version 10.4 and later.

54.23.11 CreateIncremental(options as dictionary=nil) as CGImageSourceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Create an incremental image source.
Notes:

options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

The function CreateIncremental creates an empty image source container to which you can add data later

by calling the function UpdateData. You don't provide data when you call this function.

An incremental image is an image that is created in chunks, similar to the way large images viewed over the web are loaded piece by piece.

Available in Mac OS X version 10.4 and later.

54.23.12 CreateThumbnailAtIndex(index as Integer, options as dictionary = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a thumbnail image of the image located at a specified location in an image source.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim c as new CGImageSourceMBS(file)

dim d as new Dictionary
d.Value(c.kCGImageSourceThumbnailMaxPixelSize)=200
d.Value(c.kCGImageSourceCreateThumbnailFromImageIfAbsent)=true

dim img as CGImageMBS = c.CreateThumbnailAtIndex(0,d)

Backdrop=img.Picture
```

Notes:

index: The index that specifies the location of the image. The index is zero-based.

options: A dictionary that specifies additional creation options.

Returns a CGImageMBS.

If the image source is a PDF, this function creates a 72 dpi image of the PDF page specified by the index that you pass. You must, however, pass an options dictionary that contains either the kCGImageSourceCreateThumbnailFromImageIfAbsent or kCGImageSourceCreateThumbnailFromImageAlways keys, with the value of the key set to TRUE.

Available in Mac OS X version 10.4 and later.

54.23.13 CreateThumbnailMT(data as MemoryBlock, ImageIndex as integer = 0, Options as dictionary = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates thumbnail for image thread friendly.
Notes:

Data contains the image file data.
ImageIndex is the index of the image in the file to query.
Options contains various flags for options to creating image source and creating thumbnail.

Returns nil in case of any error.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.
See also:

- 54.23.14 CreateThumbnailMT(data as String, ImageIndex as integer = 0, Options as dictionary = nil) as CGImageMBS 10434
- 54.23.15 CreateThumbnailMT(file as FolderItem, ImageIndex as integer = 0, Options as dictionary = nil) as CGImageMBS 10435

54.23.14 CreateThumbnailMT(data as String, ImageIndex as integer = 0, Options as dictionary = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates thumbnail for image thread friendly.
Notes:

Data contains the image file data.
ImageIndex is the index of the image in the file to query.
Options contains various flags for options to creating image source and creating thumbnail.

Returns nil in case of any error.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows

GUI with progress window.
See also:

- 54.23.13 CreateThumbnailMT(data as MemoryBlock, ImageIndex as integer = 0, Options as dictionary = nil) as CGImageMBS 10434
- 54.23.15 CreateThumbnailMT(file as FolderItem, ImageIndex as integer = 0, Options as dictionary = nil) as CGImageMBS 10435

54.23.15 CreateThumbnailMT(file as FolderItem, ImageIndex as integer = 0, Options as dictionary = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates thumbnail for image thread friendly.
Notes:

File refers to image file on disk.
ImageIndex is the index of the image in the file to query.
Options contains various flags for options to creating image source and creating thumbnail.

Returns nil in case of any error.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.
See also:

- 54.23.13 CreateThumbnailMT(data as MemoryBlock, ImageIndex as integer = 0, Options as dictionary = nil) as CGImageMBS 10434
- 54.23.14 CreateThumbnailMT(data as String, ImageIndex as integer = 0, Options as dictionary = nil) as CGImageMBS 10434

54.23.16 CreateWithData(data as string, options as dictionary=nil) as CGImageSourceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image source that reads from a string.
Notes:

data: The data string to read from.
options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdenti-

fierHint.

Returns an image source.
Available in Mac OS X version 10.4 and later.

54.23.17 CreateWithFile(file as folderitem, options as dictionary=nil) as CGImageSourceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image source that reads from a location specified by a file.
Example:

```
// get a picture file
dim file as FolderItem = SpecialFolder.Desktop.Child("sylwia.jpg")
// get image source
dim source as new CGImageSourceMBS(file)
// read image
dim image as CGImageMBS = source.CreateImageAtIndex(0)
// get Color space from image
dim profile as CGColorSpaceMBS = image.ColorSpace
// get ICC profile data
dim ICCProfile as string = profile.ICCProfile
// and parse it with LCMS and show name
dim LCMSProfile as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromString(ICCProfile)
MsgBox LCMSProfile.Name
```

Notes:

url: The URL to read from.

options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

Returns an image source.

Available in Mac OS X version 10.4 and later.

54.23.18 CreateWithURL(url as string, options as dictionary=nil) as CGImageSourceMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an image source that reads from a location specified by a URL.
Notes:

url: The URL to read from.

options: A dictionary that specifies additional creation options. For example kCGImageSourceTypeIdentifierHint.

On success the handle value is not zero.

Available in Mac OS X version 10.4 and later.

54.23.19 kCGImageProperty8BIMDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an Adobe Photoshop image.

54.23.20 kCGImageProperty8BIMLayerNames as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The layer names for an Adobe Photoshop file.

54.23.21 kCGImagePropertyCIFFCameraSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The camera serial number.

54.23.22 kCGImagePropertyCIFFContinuousDrive as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The continuous drive mode.

54.23.23 kCGImagePropertyCIFFDescription as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The camera description..

54.23.24 kCGImagePropertyCIFFDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

A dictionary of key-value pairs for an image that uses Camera Image File Format (CIFF).

Available in Mac OS X v10.5 and later.

54.23.25 kCGImagePropertyCIFFFirmware as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The firmware version.

54.23.26 kCGImagePropertyCIFFFlashExposureComp as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The flash exposure compensation.

54.23.27 kCGImagePropertyCIFFFocusMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The focus mode.

54.23.28 kCGImagePropertyCIFFImageFileName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The image file name.

54.23.29 kCGImagePropertyCIFFImageName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The image name.

54.23.30 kCGImagePropertyCIFFImageSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The image serial number.

54.23.31 kCGImagePropertyCIFFLensMaxMM as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The maximum lens length.

54.23.32 kCGImagePropertyCIFFLensMinMM as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The minimum lens length.

54.23.33 kCGImagePropertyCIFFLensModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The lens model.

54.23.34 kCGImagePropertyCIFFMeasuredEV as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The measured EV.

54.23.35 kCGImagePropertyCIFFMeteringMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The metering mode.

54.23.36 kCGImagePropertyCIFFOwnerName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The owner name.

54.23.37 kCGImagePropertyCIFFRecordID as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The record ID

54.23.38 kCGImagePropertyCIFFReleaseMethod as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The release method.

54.23.39 kCGImagePropertyCIFFReleaseTiming as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The release timing.

54.23.40 kCGImagePropertyCIFFSelfTimingTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The self timing time.

54.23.41 kCGImagePropertyCIFFShootingMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The shooting mode.

54.23.42 kCGImagePropertyCIFFWhiteBalanceIndex as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Camera Image File Format (CIFF).
Notes: The white balance index.

54.23.43 kCGImagePropertyColorModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

The color model of the image such as, "RGB", "CMYK", "Gray", or "Lab". The value of this key is CFStringRef.

A color model describes how color values are represented mathematically. A color space is a color model combined with a definition of how to interpret values within the model.

54.23.44 kCGImagePropertyColorModelCMYK as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Values for the color model property.
Notes: A CMYK color model.

54.23.45 kCGImagePropertyColorModelGray as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Values for the color model property.
Notes: A Gray color model.

54.23.46 kCGImagePropertyColorModelLab as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Values for the color model property.
Notes: A Lab color model.

54.23.47 kCGImagePropertyColorModelRGB as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Values for the color model property.
Notes: An RGB color model.

54.23.48 kCGImagePropertyDepth as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The number of bits in each color sample of each pixel. If present, this key is a CFNumber value.

54.23.49 kCGImagePropertyDNGBackwardVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: The oldest version for which a file is compatible.

54.23.50 kCGImagePropertyDNGCameraSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: The camera serial number.

54.23.51 kCGImagePropertyDNGDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses the Digital Negative (DNG) archival format.

54.23.52 kCGImagePropertyDNGLensInfo as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: Information about the lens used for the image.

54.23.53 kCGImagePropertyDNGLocalizedCameraModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: The localized camera model name.

54.23.54 kCGImagePropertyDNGUniqueCameraModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: A unique, nonlocalized name for the camera mode.

54.23.55 kCGImagePropertyDNGVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses the Digital Negative (DNG) archival format.
Notes: An encoding of the four-tier version number.

54.23.56 kCGImagePropertyDPIHeight as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The resolution, in dots per inch, in the x dimension. If present, this key is a CFNumber value.

54.23.57 kCGImagePropertyDPIWidth as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The resolution, in dots per inch, in the y dimension. If present, this key is a CFNumber value.

54.23.58 kCGImagePropertyExifApertureValue as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The aperture value.

54.23.59 kCGImagePropertyExifAuxDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: An auxiliary dictionary of key-value pairs for an image that uses Exchangeable Image File Format (EXIF).

54.23.60 kCGImagePropertyExifAuxFirmware as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: Firmware information.

54.23.61 kCGImagePropertyExifAuxFlashCompensation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: Flash compensation.

54.23.62 kCGImagePropertyExifAuxImageNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The image number.

54.23.63 kCGImagePropertyExifAuxLensID as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The lens ID.

54.23.64 kCGImagePropertyExifAuxLensInfo as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: Lens information.

54.23.65 kCGImagePropertyExifAuxLensModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The lens model.

54.23.66 kCGImagePropertyExifAuxLensSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The lens serial number.

54.23.67 kCGImagePropertyExifAuxOwnerName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The owner name.

54.23.68 kCGImagePropertyExifAuxSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the Exif Auxiliary dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The serial number.

54.23.69 kCGImagePropertyExifBrightnessValue as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The brightness value.

54.23.70 kCGImagePropertyExifCFAPattern as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The color filter array (CFA) pattern, which is the geometric patter of the image sensor for a 1-chip color sensor area.

54.23.71 kCGImagePropertyExifColorSpace as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The color space.

54.23.72 kCGImagePropertyExifComponentsConfiguration as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The components configuration. For compressed data, specifies that the channels of each component are arranged in increasing numeric order (from first component to the fourth).

54.23.73 kCGImagePropertyExifCompressedBitsPerPixel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The compressed bits per pixel.

54.23.74 kCGImagePropertyExifContrast as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The contrast applied to the image.

54.23.75 kCGImagePropertyExifCustomRendered as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: Special rendering performed on the image data.

54.23.76 kCGImagePropertyExifDateTimeDigitized as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The digitized date and time.

54.23.77 kCGImagePropertyExifDateTimeOriginal as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The original date and time.

54.23.78 kCGImagePropertyExifDeviceSettingDescription as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: For a particular camera mode, indicates the conditions for taking the picture.

54.23.79 kCGImagePropertyExifDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses Exchangeable Image File Format (EXIF).

54.23.80 kCGImagePropertyExifDigitalZoomRatio as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The digital zoom ratio.

54.23.81 kCGImagePropertyExifExposureBiasValue as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The exposure bias value.

54.23.82 kCGImagePropertyExifExposureIndex as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The selected exposure index.

54.23.83 kCGImagePropertyExifExposureMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The exposure mode setting.

54.23.84 kCGImagePropertyExifExposureProgram as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The exposure program.

54.23.85 kCGImagePropertyExifExposureTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The exposure time.

54.23.86 kCGImagePropertyExifFileSource as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The image source.

54.23.87 kCGImagePropertyExifFlash as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The flash status when the image was shot.

54.23.88 kCGImagePropertyExifFlashEnergy as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The strobe energy when the image was captures, in beam candle power seconds.

54.23.89 kCGImagePropertyExifFlashPixVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The FlashPix version supported by an FPXR file. FlashPix is a format for multi-resolution, tiled images, that facilitates fast onscreen viewing.

54.23.90 kCGImagePropertyExifFNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The F number.

54.23.91 kCGImagePropertyExifFocalLength as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The focal length.

54.23.92 kCGImagePropertyExifFocalLenIn35mmFilm as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The equivalent focal length in 35 mm film.

54.23.93 kCGImagePropertyExifFocalPlaneResolutionUnit as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The unit of measurement for the focal plane x and y tags.

54.23.94 kCGImagePropertyExifFocalPlaneXResolution as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The number of image-width pixels (x) per focal plane resolution unit.

54.23.95 kCGImagePropertyExifFocalPlaneYResolution as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The number of image-height pixels (y)per focal plane resolution unit.

54.23.96 kCGImagePropertyExifGainControl as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The gain adjustment applied to the image.

54.23.97 kCGImagePropertyExifGamma as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The gamma setting.

54.23.98 kCGImagePropertyExifImageUniqueID as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The unique ID of the image.

54.23.99 kCGImagePropertyExifISOSpeedRatings as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: ISO speed ratings.

54.23.100 kCGImagePropertyExifLightSource as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The light source.

54.23.101 kCGImagePropertyExifMakerNote as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: A maker note.

54.23.102 kCGImagePropertyExifMaxApertureValue as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The maximum aperture value.

54.23.103 kCGImagePropertyExifMeteringMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The metering mode.

54.23.104 kCGImagePropertyExifOECF as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The opto-electrical conversion function (OECF), which defines the relationship between the optical input of the camera and the image values.

54.23.105 kCGImagePropertyExifPixelXDimension as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The pixel x dimension.

54.23.106 kCGImagePropertyExifPixelYDimension as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The pixel y dimension.

54.23.107 kCGImagePropertyExifRelatedSoundFile as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: A related sound file.

54.23.108 kCGImagePropertyExifSaturation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The saturation applied to the image.

54.23.109 kCGImagePropertyExifSceneCaptureType as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The scene capture type (standard, landscape, portrait, night).

54.23.110 kCGImagePropertyExifSceneType as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The scene type.

54.23.111 kCGImagePropertyExifSensingMethod as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The sensor type of the camera or input device.

54.23.112 kCGImagePropertyExifSharpness as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The sharpness applied to the image.

54.23.113 kCGImagePropertyExifShutterSpeedValue as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The shutter speed value.

54.23.114 kCGImagePropertyExifSpatialFrequencyResponse as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The spatial frequency table and spatial frequency response values in the direction of image width, image height, and diagonal directions. See ISO 12233..

54.23.115 kCGImagePropertyExifSpectralSensitivity as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The spectral sensitivity of each channel.

54.23.116 kCGImagePropertyExifSubjectArea as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The subject area.

54.23.117 kCGImagePropertyExifSubjectDistance as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The distance to the subject, in meters.

54.23.118 kCGImagePropertyExifSubjectDistRange as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The subject distance range.

54.23.119 kCGImagePropertyExifSubjectLocation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The location of the scene's primary subject.

54.23.120 kCGImagePropertyExifSubsecTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The fraction of seconds for the date and time tag.

54.23.121 kCGImagePropertyExifSubsecTimeDigitized as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The fraction of seconds for the digitized time tag.

54.23.122 kCGImagePropertyExifSubsecTimeOriginal as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The fraction of seconds for the original date and time tag.

54.23.123 kCGImagePropertyExifUserComment as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: A user comment.

54.23.124 kCGImagePropertyExifVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The version.

54.23.125 kCGImagePropertyExifWhiteBalance as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for the (EXIF) dictionary for an image that uses Exchangeable Image File Format (EXIF).
Notes: The white balance mode.

54.23.126 kCGImagePropertyFileSize as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

The size of the image file in bytes, if known. If present, this key is a CFNumber value.
Available in Mac OS X v10.4 and later.

This key is used in the image source properties.

54.23.127 kCGImagePropertyGIFDelayTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Graphics Interchange Format (GIF).
Notes: The delay time.

54.23.128 kCGImagePropertyGIFDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses Graphics Interchange Format (GIF).

54.23.129 kCGImagePropertyGIFHasGlobalColorMap as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Graphics Interchange Format (GIF).
Notes: Whether or not the GIF has a global color map.

54.23.130 kCGImagePropertyGIFImageColorMap as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Graphics Interchange Format (GIF).
Notes: The image color map.

54.23.131 kCGImagePropertyGIFLoopCount as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Graphics Interchange Format (GIF).
Notes: The loop count.

54.23.132 kCGImagePropertyGIFUnclampedDelayTime as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The unclamped delay time.
Available in OS X v10.7 and later.

54.23.133 kCGImagePropertyGPSAltitude as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The altitude.

54.23.134 kCGImagePropertyGPSAltitudeRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The reference altitude.

54.23.135 kCGImagePropertyGPSAreaInformation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The name of the GPS area.

54.23.136 kCGImagePropertyGPSDateStamp as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The data and time information relative to Coordinated Universal Time (UTC).

54.23.137 kCGImagePropertyGPSDestBearing as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The bearing to the destination point.

54.23.138 kCGImagePropertyGPSDestBearingRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The reference for giving the bearing to the destination point.

54.23.139 kCGImagePropertyGPSDestDistance as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The distance to the destination point.

54.23.140 kCGImagePropertyGPSDestDistanceRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The units for expressing the distance to the destination point.

54.23.141 kCGImagePropertyGPSDestLatitude as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The latitude of the destination point.

54.23.142 kCGImagePropertyGPSDestLatitudeRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: Whether the latitude of the destination point is northern or southern.

54.23.143 kCGImagePropertyGPSDestLongitude as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The longitude of the destination point.

54.23.144 kCGImagePropertyGPSDestLongitudeRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: Whether the longitude of the destination point is east or west.

54.23.145 kCGImagePropertyGPSDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that has Global Positioning System (GPS) information.

54.23.146 kCGImagePropertyGPSDifferental as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: Whether differential correction is applied to the GPS receiver.

54.23.147 kCGImagePropertyGPSDOP as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The data degree of precision (DOP).

54.23.148 kCGImagePropertyGPSImgDirection as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The direction of the image.

54.23.149 kCGImagePropertyGPSImgDirectionRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The reference for the direction of the image.

54.23.150 kCGImagePropertyGPSLatitude as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The latitude.

54.23.151 kCGImagePropertyGPSLatitudeRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: Whether the latitude is northern or southern.

54.23.152 kCGImagePropertyGPSLongitude as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The longitude.

54.23.153 kCGImagePropertyGPSLongitudeRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: Whether the longitude is east or west.

54.23.154 kCGImagePropertyGPSMapDatum as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The geodetic survey data used by the GPS receiver.

54.23.155 kCGImagePropertyGPSMeasureMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The measurement mode.

54.23.156 kCGImagePropertyGPSProcessingMethod as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The name of the method used for finding a location.

54.23.157 kCGImagePropertyGPSSatellites as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The satellites used for GPS measurements.

54.23.158 kCGImagePropertyGPSSpeed as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The GPS receiver speed of movement.

54.23.159 kCGImagePropertyGPSSpeedRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The unit for expressing the GPS receiver speed of movement.

54.23.160 kCGImagePropertyGPSStatus as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The status of the GPS receiver.

54.23.161 kCGImagePropertyGPSTimeStamp as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The time as UTC (Coordinated Universal Time).

54.23.162 kCGImagePropertyGPSTrack as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The direction of GPS receiver movement.

54.23.163 kCGImagePropertyGPSTrackRef as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The reference for the direction of GPS receiver movement.

54.23.164 kCGImagePropertyGPSVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that has Global Positioning System (GPS) information.
Notes: The version.

54.23.165 kCGImagePropertyHasAlpha as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: Whether or not the image has an alpha channel. The value of this key is kCFBooleanTrue if the image contains an alpha channel.

54.23.166 kCGImagePropertyIPTCActionAdvised as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The advised action.

54.23.167 kCGImagePropertyIPTCByline as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The byline.

54.23.168 kCGImagePropertyIPTCBylineTitle as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The byline title.

54.23.169 kCGImagePropertyIPTCCaptionAbstract as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The caption abstract.

54.23.170 kCGImagePropertyIPTCCategory as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The category.

54.23.171 kCGImagePropertyIPTCCity as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The city.

54.23.172 kCGImagePropertyIPTCContact as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: Contact information.

54.23.173 kCGImagePropertyIPTCContactInfoAddress as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The address portion of the contact information.
Available in OS X v10.6 and later.

54.23.174 kCGImagePropertyIPTCContactInfoCity as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The city portion of the contact information.
Available in OS X v10.6 and later.

54.23.175 kCGImagePropertyIPTCContactInfoCountry as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The country portion of the contact information.
Available in OS X v10.6 and later.

54.23.176 kCGImagePropertyIPTCContactInfoEmails as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

Email addresses for the contact.
Available in OS X v10.6 and later.

54.23.177 kCGImagePropertyIPTCContactInfoPhones as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

Phone numbers for the contact.
Available in OS X v10.6 and later.

54.23.178 kCGImagePropertyIPTCContactInfoPostalCode as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The postal code portion of the contact information.
Available in OS X v10.6 and later.

54.23.179 kCGImagePropertyIPTCContactInfoStateProvince as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The state or province for the contact.
Available in OS X v10.6 and later.

54.23.180 kCGImagePropertyIPTCContactInfoWebURLs as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

Web addresses for the contact.
Available in OS X v10.6 and later.

54.23.181 kCGImagePropertyIPTCContentLocationCode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The content location code.

54.23.182 kCGImagePropertyIPTCContentLocationName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The content location name.

54.23.183 kCGImagePropertyIPTCCopyrightNotice as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The copyright notice.

54.23.184 kCGImagePropertyIPTCCountryPrimaryLocationCode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The country primary location code.

54.23.185 kCGImagePropertyIPTCCountryPrimaryLocationName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The country primary location name.

54.23.186 kCGImagePropertyIPTCCreatorContactInfo as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The creator's contact info. See "IPTC Creator Contact Info Dictionary Keys."
Available in OS X v10.6 and later.

54.23.187 kCGImagePropertyIPTCCredit as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: Credit information.

54.23.188 kCGImagePropertyIPTCDateCreated as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The date created.

54.23.189 kCGImagePropertyIPTCDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Example:

```
// Change rotation in an image file

// files
dim dpath as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim opath as folderitem = dpath.parent.Child("output.jpg")

// open source
dim imageSource as new cgimagesourcembs(dpath)

// read image
dim img as cgimagembs = imageSource.createimageatindex(0)

// global properties
dim globalprop as dictionary = imageSource.properties
// per image properties
dim p as Dictionary = imageSource.PropertiesAtIndex(0)
```

```
dim imageDest as new CGImageDestinationMBS(opath,"public.jpeg",1)

'const orientation = 1 // top left
const orientation = 3 // bottom right

// set globals
imageDest.SetProperties(globalprop)

// now set new orientation
p.value(imageDest.kCGImageDestinationOrientation) = orientation
p.value(imageDest.kCGImageDestinationMergeMetadata) = true

// change tiff dictionary, if present
dim dTIFF as Dictionary = p.lookup(imageSource.kCGImagePropertyTIFFDictionary, nil)
if dTIFF <>nil then
dTIFF.value(imageSource.kCGImagePropertyTIFFOrientation) = orientation
end if

// change iptc dictionary, if present
dim dIPTC as Dictionary = p.lookup(imageSource.kCGImagePropertyIPTCDictionary, nil)
if dIPTC <>nil then
dIPTC.value(imageSource.kCGImagePropertyIPTCImageOrientation) = orientation
end if

// write out image
imageDest.AddImage(img,p)
call imageDest.Finalize
```

Notes:

A dictionary of key-value pairs for an image that uses International Press Telecommunications Council (IPTC) metadata.

IPTC constants are metadata elements of the Information Interchange Model (IIM) used to provide information about images. The IIM was developer by the Newspaper Association of America (NAA) and the International Press Telecommunications Council (IPTC).

54.23.190 kCGImagePropertyIPTCDigitalCreationDate as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The digital creation date.

54.23.191 kCGImagePropertyIPTCDigitalCreationTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The digital creation time.

54.23.192 kCGImagePropertyIPTCEditorialUpdate as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: An editorial update.

54.23.193 kCGImagePropertyIPTCEditStatus as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The edit status.

54.23.194 kCGImagePropertyIPTCExpirationDate as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The expiration date.

54.23.195 kCGImagePropertyIPTCExpirationTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The expiration time.

54.23.196 kCGImagePropertyIPTCFixtureIdentifier as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: A fixture identifier.

54.23.197 kCGImagePropertyIPTCHeadline as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The headline.

54.23.198 kCGImagePropertyIPTCImageOrientation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The image orientation.

54.23.199 kCGImagePropertyIPTCImageType as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The image type.

54.23.200 kCGImagePropertyIPTCKeywords as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: Keywords

54.23.201 kCGImagePropertyIPTCLanguageIdentifier as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The language identifier.

54.23.202 kCGImagePropertyIPTCObjectAttributeReference as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The object attribute.

54.23.203 kCGImagePropertyIPTCObjectCycle as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The object cycle.

54.23.204 kCGImagePropertyIPTCObjectName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The object name.

54.23.205 kCGImagePropertyIPTCObjectTypeReference as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The object type.

54.23.206 kCGImagePropertyIPTCOriginalTransmissionReference as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The original transmission reference.

54.23.207 kCGImagePropertyIPTCOriginatingProgram as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The originating program.

54.23.208 kCGImagePropertyIPTCProgramVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The program version.

54.23.209 kCGImagePropertyIPTCProvinceState as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The province or state.

54.23.210 kCGImagePropertyIPTCReferenceDate as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The reference date.

54.23.211 kCGImagePropertyIPTCReferenceNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The reference number.

54.23.212 kCGImagePropertyIPTCReferenceService as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The reference service.

54.23.213 kCGImagePropertyIPTCReleaseDate as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The release date.

54.23.214 kCGImagePropertyIPTCReleaseTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The release time.

54.23.215 kCGImagePropertyIPTCRightsUsageTerms as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The usage rights for the image.
Available in OS X v10.6 and later.

54.23.216 kCGImagePropertyIPTCScene as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The scene codes for the image; a scene code is a six-digit string.
Available in OS X v10.6 and later.

54.23.217 kCGImagePropertyIPTCSource as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The source.

54.23.218 kCGImagePropertyIPTCSpecialInstructions as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: Special instructions.

54.23.219 kCGImagePropertyIPTCStarRating as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The star rating.

54.23.220 kCGImagePropertyIPTCSubjectReference as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The subject.

54.23.221 kCGImagePropertyIPTCSubLocation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The sublocation.

54.23.222 kCGImagePropertyIPTCSupplementalCategory as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: A supplemental category.

54.23.223 kCGImagePropertyIPTCTimeCreated as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The time created.

54.23.224 kCGImagePropertyIPTCUrgency as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The urgency level.

54.23.225 kCGImagePropertyIPTCWriterEditor as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses International Press Telecommunications Council (IPTC) metadata.
Notes: The writer or editor.

54.23.226 kCGImagePropertyIsFloat as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: Whether or not the image contains floating-point pixel samples. The value of this key is kCFBooleanTrue if the image contains them.

54.23.227 kCGImagePropertyIsIndexed as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: Whether or not the image contains indexed pixel samples (sometimes called paletted samples). The value of this key is kCFBooleanTrue if the image contains them.

54.23.228 kCGImagePropertyJFIFDensityUnit as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses JPEG File Interchange Format (JFIF).
Notes: The density unit.

54.23.229 kCGImagePropertyJFIFDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses JPEG File Interchange Format (JFIF).

54.23.230 kCGImagePropertyJFIFIsProgressive as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses JPEG File Interchange Format (JFIF).
Notes: Whether or not the image is progressive.

54.23.231 kCGImagePropertyJFIFVersion as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses JPEG File Interchange Format (JFIF).
Notes: The version.

54.23.232 kCGImagePropertyJFIFXDensity as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses JPEG File Interchange Format (JFIF).
Notes: The x density.

54.23.233 kCGImagePropertyJFIFYDensity as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses JPEG File Interchange Format (JFIF).
Notes: The y density.

54.23.234 kCGImagePropertyMakerCanonAspectRatioInfo as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The image aspect ratio.

54.23.235 kCGImagePropertyMakerCanonCameraSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The camera serial number.

54.23.236 kCGImagePropertyMakerCanonContinuousDrive as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The presence of a continuous drive.

54.23.237 kCGImagePropertyMakerCanonDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

A dictionary of key-value pairs for an image from a Canon camera.
Available in Mac OS X v10.5 and later.

54.23.238 kCGImagePropertyMakerCanonFirmware as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The firmware version.

54.23.239 kCGImagePropertyMakerCanonFlashExposureComp as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The flash exposure compensation.

54.23.240 kCGImagePropertyMakerCanonImageSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The image serial number.

54.23.241 kCGImagePropertyMakerCanonLensModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The lens model.

54.23.242 kCGImagePropertyMakerCanonOwnerName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The owner name.

54.23.243 kCGImagePropertyMakerFujiDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

A dictionary of key-value pairs for an image from a Fuji camera.
Available in Mac OS X v10.5 and later.

54.23.244 kCGImagePropertyMakerMinoltaDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

A dictionary of key-value pairs for an image from a Minolta camera.
Available in Mac OS X v10.5 and later.

54.23.245 kCGImagePropertyMakerNikonCameraSerialNumber as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The camera serial number.

54.23.246 kCGImagePropertyMakerNikonColorMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The color mode.

54.23.247 kCGImagePropertyMakerNikonDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

A dictionary of key-value pairs for an image from a Nikon camera.
Available in Mac OS X v10.5 and later.

54.23.248 kCGImagePropertyMakerNikonDigitalZoom as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The digital zoom setting.

54.23.249 kCGImagePropertyMakerNikonFlashExposureComp as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The flash exposure compensation.

54.23.250 kCGImagePropertyMakerNikonFlashSetting as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The flash setting.

54.23.251 kCGImagePropertyMakerNikonFocusDistance as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The focus distance.

54.23.252 kCGImagePropertyMakerNikonFocusMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The focus mode.

54.23.253 kCGImagePropertyMakerNikonImageAdjustment as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: Image adjustment setting.

54.23.254 kCGImagePropertyMakerNikonISOSelection as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The ISO selection.

54.23.255 kCGImagePropertyMakerNikonISOSetting as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The ISO setting.

54.23.256 kCGImagePropertyMakerNikonLensAdapter as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The lens adapter.

54.23.257 kCGImagePropertyMakerNikonLensInfo as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: Lens information.

54.23.258 kCGImagePropertyMakerNikonLensType as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The lens type.

54.23.259 kCGImagePropertyMakerNikonQuality as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The quality setting.

54.23.260 kCGImagePropertyMakerNikonSharpenMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The sharpening mode.

54.23.261 kCGImagePropertyMakerNikonShootingMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The shooting mode.

54.23.262 kCGImagePropertyMakerNikonShutterCount as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The shutter count.

54.23.263 kCGImagePropertyMakerNikonWhiteBalanceMode as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image from a Nikon camera.
Notes: The white balance mode.

54.23.264 kCGImagePropertyMakerOlympusDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

A dictionary of key-value pairs for an image from a Olympus camera.
Available in Mac OS X v10.5 and later.

54.23.265 kCGImagePropertyMakerPentaxDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

A dictionary of key-value pairs for an image from a Pentax camera.
Available in Mac OS X v10.5 and later.

54.23.266 kCGImagePropertyOrientation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes:

The intended display orientation of the image. If present, this key is a CFNumber value with the same value as defined by the TIFF and EXIF specifications. The value specifies where the origin (0,0) of the image is locates, as shown in Table 1. If not present, a value of 1 is assumed.

Value	Location of the origin of the image
1	Top, left
2	Top, right
3	Bottom, right
4	Bottom, left
5	Left, top
6	Right, top
7	Right, bottom
8	Left, bottom

54.23.267 kCGImagePropertyPixelHeight as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Example:

```
// open an image file
dim path as string = "/Library/Desktop Pictures/Galaxy.jpg"
dim f as FolderItem = GetFolderItem(path, FolderItem.PathTypeNative)
Dim c As New CGImageSourceMBS(f)

// properties for first image
dim p as Dictionary = c.PropertiesAtIndex(0)
dim w as Integer = p.Value(c.kCGImagePropertyPixelWidth)
dim h as Integer = p.Value(c.kCGImagePropertyPixelHeight)

// show size
```

```
MsgBox str(w)+" x "+str(h)
```

Notes: The number of pixels in the y dimension. If present, this key is a CFNumber value.

54.23.268 kCGImagePropertyPixelWidth as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Example:

```
// open an image file
dim path as string = "/Library/Desktop Pictures/Galaxy.jpg"
dim f as FolderItem = GetFolderItem(path, FolderItem.PathTypeNative)
Dim c As New CGImageSourceMBS(f)

// properties for first image
dim p as Dictionary = c.PropertiesAtIndex(0)
dim w as Integer = p.Value(c.kCGImagePropertyPixelWidth)
dim h as Integer = p.Value(c.kCGImagePropertyPixelHeight)

// show size
MsgBox str(w)+" x "+str(h)
```

Notes: The number of pixels in the x dimension. If present, this key is a CFNumber value.

54.23.269 kCGImagePropertyPNGAuthor as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The content is a string that identifies the author of the image.
Available in OS X v10.7 and later.

54.23.270 kCGImagePropertyPNGChromaticities as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The chromaticities.

54.23.271 kCGImagePropertyPNGCopyright as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The content is a string that identifies the copyright of the image.
Available in OS X v10.7 and later.

54.23.272 kCGImagePropertyPNGCreationTime as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The content is a string that identifies the date and time the image was created.
Available in OS X v10.7 and later.

54.23.273 kCGImagePropertyPNGDescription as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The content is a string that describes the image.
Available in OS X v10.7 and later.

54.23.274 kCGImagePropertyPNGDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that uses Portable Network Graphics (PNG) format.

54.23.275 kCGImagePropertyPNGGamma as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The gamma value.

54.23.276 kCGImagePropertyPNGInterlaceType as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The interlace type.

54.23.277 kCGImagePropertyPNGModificationTime as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The content is a string that identifies the last date and time the image was modified.
Available in OS X v10.7 and later.

54.23.278 kCGImagePropertyPNGSoftware as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The content is a string that identifies the software used to create the image.
Available in OS X v10.7 and later.

54.23.279 kCGImagePropertyPNGsRGBIntent as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The sRGB intent.

54.23.280 kCGImagePropertyPNGTitle as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes:

The content is a string that holds the image's title.
Available in OS X v10.7 and later.

54.23.281 kCGImagePropertyPNGXPixelsPerMeter as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The number of x pixels per meter.

54.23.282 kCGImagePropertyPNGYPixelsPerMeter as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Portable Network Graphics (PNG) format.
Notes: The number of y pixels per meter.

54.23.283 kCGImagePropertyProfileName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: The name of the optional ICC profile embedded in the image, if known. If present, the value of this key is a CFStringRef.

54.23.284 kCGImagePropertyRawDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Notes: A dictionary of key-value pairs for an image that contains minimally processed, or raw, data.

54.23.285 kCGImagePropertyTIFFArtist as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The artist.

54.23.286 kCGImagePropertyTIFFCompression as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The compression scheme used on the image data.

54.23.287 kCGImagePropertyTIFFCopyright as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: Copyright information.

54.23.288 kCGImagePropertyTIFFDateTime as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The date and time.

54.23.289 kCGImagePropertyTIFFDictionary as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: One of the keys for the properties dictionary.
Example:

```
// Change rotation in an image file

// files
dim dpath as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim opath as folderitem = dpath.parent.Child("output.jpg")

// open source
```

```
dim imageSource as new cgimagesourcembs(dpath)

// read image
dim img as cgimagembs = imageSource.createimageatindex(0)

// global properties
dim globalprop as dictionary = imageSource.properties
// per image properties
dim p as Dictionary = imageSource.PropertiesAtIndex(0)

dim imageDest as new CGImageDestinationMBS(opath,"public.jpeg",1)

'const orientation = 1 // top left
const orientation = 3 // bottom right

// set globals
imageDest.SetProperties(globalprop)

// now set new orientation
p.value(imageDest.kCGImageDestinationOrientation) = orientation
p.value(imageDest.kCGImageDestinationMergeMetadata) = true

// change tiff dictionary, if present
dim dTIFF as Dictionary = p.lookup(imageSource.kCGImagePropertyTIFFDictionary, nil)
if dTIFF <>nil then
dTIFF.value(imageSource.kCGImagePropertyTIFFOrientation) = orientation
end if

// change iptc dictionary, if present
dim dIPTC as Dictionary = p.lookup(imageSource.kCGImagePropertyIPTCDictionary, nil)
if dIPTC <>nil then
dIPTC.value(imageSource.kCGImagePropertyIPTCImageOrientation) = orientation
end if

// write out image
imageDest.AddImage(img,p)
call imageDest.Finalize
```

Notes: A dictionary of key-value pairs for an image that uses Tagged Image File Format (TIFF).

54.23.290 kCGImagePropertyTIFFDocumentName as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).

Notes: The document name.

54.23.291 kCGImagePropertyTIFFHostComputer as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The computer or operation system used when the image was created.

54.23.292 kCGImagePropertyTIFFImageDescription as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The image description.

54.23.293 kCGImagePropertyTIFFMake as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The camera or input device make.

54.23.294 kCGImagePropertyTIFFModel as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: A camera or input device model.

54.23.295 kCGImagePropertyTIFFOrientation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Example:

```
// Change rotation in an image file

// files
```

```
dim dpath as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim opath as folderitem = dpath.parent.Child("output.jpg")

// open source
dim imageSource as new cgimagesourcembs(dpath)

// read image
dim img as cgimagembs = imageSource.createimageatindex(0)

// global properties
dim globalprop as dictionary = imageSource.properties
// per image properties
dim p as Dictionary = imageSource.PropertiesAtIndex(0)

dim imageDest as new CGImageDestinationMBS(opath,"public.jpeg",1)

'const orientation = 1 // top left
const orientation = 3 // bottom right

// set globals
imageDest.SetProperties(globalprop)

// now set new orientation
p.value(imageDest.kCGImageDestinationOrientation) = orientation
p.value(imageDest.kCGImageDestinationMergeMetadata) = true

// change tiff dictionary, if present
dim dTIFF as Dictionary = p.lookup(imageSource.kCGImagePropertyTIFFDictionary, nil)
if dTIFF <>nil then
dTIFF.value(imageSource.kCGImagePropertyTIFFOrientation) = orientation
end if

// change iptc dictionary, if present
dim dIPTC as Dictionary = p.lookup(imageSource.kCGImagePropertyIPTCDictionary, nil)
if dIPTC <>nil then
dIPTC.value(imageSource.kCGImagePropertyIPTCImageOrientation) = orientation
end if

// write out image
imageDest.AddImage(img,p)
call imageDest.Finalize
```

Notes: The image orientation.

54.23.296 kCGImagePropertyTIFFPhotometricInterpretation as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The color space of the image data.

54.23.297 kCGImagePropertyTIFFPrimaryChromaticities as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The chromaticities of the primaries of the image.

54.23.298 kCGImagePropertyTIFFResolutionUnit as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The units of resolution.

54.23.299 kCGImagePropertyTIFFSoftware as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The name and version of the software used for image creation.

54.23.300 kCGImagePropertyTIFFTransferFunction as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The transfer function, in tabular format, used to map pixel components from a nonlinear form into a linear form.

54.23.301 kCGImagePropertyTIFFWhitePoint as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The white point.

54.23.302 kCGImagePropertyTIFFXResolution as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The number of pixels per resolution unit in the image width direction.

54.23.303 kCGImagePropertyTIFFYResolution as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Keys for an image that uses Tagged Image File Format (TIFF).
Notes: The number of pixels per resolution unit in the image height direction.

54.23.304 kCGImageSourceCreateThumbnailFromImageAlways as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies whether a thumbnail should be created from the full image even if a thumbnail is present in the image source file. The thumbnail will be created from the full image, subject to the limit specified by kCGImageSourceThumbnailMaxPixelSize — if a maximum pixel size isn't specified, then the thumbnail will be the size of the full image, which probably isn't what you want. The value of this key must be a Boolean; the default value of this key is False.

54.23.305 kCGImageSourceCreateThumbnailFromImageIfAbsent as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies whether a thumbnail should be automatically created for an image if a thumbnail isn't present in the image source file. The thumbnail will be created from the full image, subject to the limit specified by kCGImageSourceThumbnailMaxPixelSize—if a maximum pixel size isn't specified, then the thumbnail will be the size of the full image, which probably isn't what you want. The value of this key must be a Boolean; the default value of this key is False.

54.23.306 kCGImageSourceCreateThumbnailWithTransform as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies whether the thumbnail should be rotated and scaled according to the orientation and pixel aspect ratio of the full image. The value of this key must be a Boolean; the default value of this key is False.

54.23.307 kCGImageSourceShouldAllowFloat as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies whether the image should be returned as a floating point CGImage if supported by the file format. Extended range floating point CGImage may require additional processing to render pleasingly. The value of this key must be a Boolean; the default value is False.

54.23.308 kCGImageSourceShouldCache as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies whether the image should be cached in a decoded form. The value of this key must be a Boolean; the default value is False.

54.23.309 kCGImageSourceShouldCacheImmediately as string

MBS MacCG Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: One of the keys for the options dictionary.
Notes:

Specifies whether image decoding and caching should happen at image creation time.
The value of this key must be a boolean. The default value is kCFBooleanFalse (image decoding will happen at rendering time).

54.23.310 kCGImageSourceThumbnailMaxPixelSize as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies the maximum width and height in pixels of a thumbnail. If this this key is not specified,

the width and height of a thumbnail is not limited and thumbnails may be as big as the image itself. If present, this value of this key must be an Integer.

54.23.311 kCGImageSourceTypeIdentifierHint as string

MBS MacCG Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the key names for the properties.
Notes: Specifies the "best guess" of the type identifier for the format of the image source file. If specified, the value of this key must be a String. For more information about type identifiers, see "UTType.h" in the Application Services framework.

54.23.312 Properties(options as dictionary = nil) as dictionary

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the properties of the image source.
Example:

```
dim inputfile as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// reading the picture
dim c as new CGImageSourceMBS(inputfile)
dim img as CGImageMBS = c.CreateImageAtIndex(0)
dim propertiesGlobal as Dictionary = c.Properties
dim propertiesImage as Dictionary = c.PropertiesAtIndex(0)

dim outputFile as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
dim d as new CGImageDestinationMBS(outputFile, "public.jpeg", 1)

// writing the picture and include metadata
d.SetProperties(propertiesGlobal)
d.AddImage(img, propertiesImage)
if d.FinalizeMT then
outputFile.Launch
else
MsgBox "Failed to write jpeg."
end if
```

Notes:

options: A dictionary you can use to request additional options.
Returns a dictionary that contains the properties associated with the image source container.
These properties apply to the container in general but not necessarily to any individual image contained in

the image source.
Available in Mac OS X version 10.4 and later.

54.23.313 PropertiesAtIndex(index as Integer, options as dictionary = nil) as dictionary

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the properties of the image at a specified location in an image source.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim c as new CGImageSourceMBS(file)

dim d as Dictionary = c.PropertiesAtIndex(0)

dim e as Dictionary
e=d.Value(c.kCGImagePropertyExifDictionary)

if e<>Nil then
dim keys(-1) as Variant = e.Keys
dim lines(-1) as string

for each key as string in keys
lines.Append key+": "+e.Value(key)
next

MsgBox "Exif: "+EndOfLine+EndOfLine+Join(lines,EndOfLine)
end if

e=d.Value(c.kCGImagePropertyGPSDictionary)

if e<>Nil then
dim keys(-1) as Variant = e.Keys
dim lines(-1) as string

for each key as string in keys
lines.Append key+": "+e.Value(key)
next

MsgBox "GPS: "+EndOfLine+EndOfLine+Join(lines,EndOfLine)
end if
```

Notes:

index: The index of the image whose properties you want to obtain. The index is zero-based.
options: A dictionary you can use to request additional options.
Returns a dictionary that contains the properties associated with the image.
Available in Mac OS X version 10.4 and later.

54.23.314 PropertiesAtIndexCF(index as Integer, options as Variant = nil) as Variant

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Returns the properties of the image at a specified location in an image source.
Notes:

index: The index of the image whose properties you want to obtain. The index is zero-based.
options: A dictionary or CFDictionaryMBS you can use to request additional options.
Returns a CFDictionaryMBS that contains the properties associated with the image.
Available in Mac OS X version 10.4 and later.

54.23.315 PropertiesCF(options as Variant = nil) as Variant

MBS MacCG Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Returns the properties of the image source.
Notes:

options: A dictionary or CFDictionaryMBS you can use to request additional options.
Returns a CFDictionaryMBS that contains the properties associated with the image source container.
These properties apply to the container in general but not necessarily to any individual image contained in the image source.
Available in Mac OS X version 10.4 and later.

54.23.316 StatusAtIndex(index as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the current status of an image that is at a specified location in an image source.
Notes:

index: The index of the image whose status you want to obtain. The index is zero-based.

Returns the current status of the image.

The status is particularly informative for incremental image sources, but may also be used by clients that

provide non-incremental data.

Available in Mac OS X version 10.4 and later.

54.23.317 TypeIdentifiers as string()

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns an array of uniform type identifiers (UTIs) that are supported for image sources.
Example:

```
dim s(-1) as string = CGImageSourceMBS.TypeIdentifiers

MsgBox Join(s,EndOfLine)

// shows:
//
// public.png
// public.jpeg
// com.compuserve.gif
// public.jpeg-2000
// com.adobe.raw-image
// com.leafamerica.raw-image
// com.hasselblad.fff-raw-image
// com.hasselblad.3fr-raw-image
// com.nikon.raw-image
// com.nikon.nrw-raw-image
// com.pentax.raw-image
// com.sony.sr2-raw-image
// com.sony.arw-raw-image
// com.epson.raw-image
// com.kodak.raw-image

// com.leica.pwl-raw-image
// com.konicaminolta.raw-image
// com.olympus.raw-image
// com.olympus.raw-image
// com.sony.raw-image
```

// com.adobe.photoshop-image
// com.adobe.pdf
// com.adobe.illustrator.ai-image
// com.microsoft.ico
// com.microsoft.bmp
// public.xbitmap-image
// com.microsoft.cur
// com.apple.pict
// com.truevision.tga-image
// com.sgi.sgi-image
// com.apple.quicktime-image
// com.kodak.flashpix-image
// com.apple.macpaint-image
// com.ilm.openexr-image
// public.radiance

Notes:

Returns an array of the UTIs that are supported for image sources.

See Uniform Type Identifiers Overview for a list of system-declared and third-party UTIs.

Available in Mac OS X version 10.4 and later.

54.23.318 UpdateData(data as string, final as boolean)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Updates an incremental image source with new data.
Notes:

data: The data to add to the image source. Each time you call the function UpdateData, the data parameter must contain all of the image file data accumulated so far.

final: A value that specifies whether the data is the final set. Pass true if it is, false otherwise.

Available in Mac OS X version 10.4 and later.

54.23.319 Properties

54.23.320 Count as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the number of images (not including thumbnails) in the image source.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim c as new CGImageSourceMBS(file)

MsgBox str(c.Count)+" images in this file."
```

Notes:

The number of images. If the image source is a multilayered PSD file, the function returns 1.

This function does not extract the layers of a PSD file.

Available in Mac OS X version 10.4 and later.
(Read only property)

54.23.321 Handle as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The internal reference.
Notes: (Read and Write property)

54.23.322 Status as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Return the status of an image source.
Notes:

Returns the current status of the image source.

The status is particularly informative for incremental image sources, but may also be used by clients that provide non-incremental data.

Available in Mac OS X version 10.4 and later.
(Read only property)

54.23.323 Type as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the uniform type identifier of the source container.
Notes:

The uniform type identifier of the image.

The uniform type identifier (UTI) of the source container can be different from the type of the images in the container. For example, the .icns format supports embedded JPEG2000. The type of the source container is "com.apple.icns" but type of the images is JPEG2000.

Available in Mac OS X version 10.4 and later.
(Read only property)

54.23.324 Constants

54.23.325 kCGImageStatusComplete = 0

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the status constants.
Notes: The operation is complete.

54.23.326 kCGImageStatusIncomplete = -1

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the status constants.
Notes: The operation is not complete.

54.23.327 kCGImageStatusInvalidData = -4

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the status constants.

Notes: The data is not valid.

54.23.328 kCGImageStatusReadingHeader = -2

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the status constants.
Notes: In the process of reading the header.

54.23.329 kCGImageStatusUnexpectedEOF = -5

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the status constants.
Notes: The end of the file was encountered unexpectedly.

54.23.330 kCGImageStatusUnknownType = -3

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the status constants.
Notes: The image is an unknown type.

54.24 class CGLayerMBS

54.24.1 class CGLayerMBS

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: The CoreGraphics layer class, similar to a template.
Notes:

CGLayer objects are useful for offscreen drawing and can be used in much the same way that a bitmap context can be used. In fact, a CGLayer object is a much better representation than a bitmap context.

Using CGLayer objects can improve performance, particularly when you need to capture a piece of drawing that you stamp repeatedly (using the same scale factor and orientation). Quartz can cache CGLayer objects to the video card, making drawing a CGLayer to a destination much faster than rendering the equivalent image constructed from a bitmap context.

A CGLayer object is created relative to a graphics context. Although layer uses this graphics context as a reference for initialization, you are not restricted to drawing the layer to this graphics context. You can draw the layer to other graphics contexts, although any limitations of the original context are imposed. For example, if you create a CGLayer object using a bitmap context, the layer is rendered as a bitmap when drawn to any other graphics context.

You can use a CGLayer when you want to apply a shadow to a group of objects (such as a group of circles) rather than to individual objects.

Use these layers in your code whenever you can, especially when:

- You need to reuse a filled or stroked shape.
- You are building a scene and at least some of it can be reused. Put the reusable drawing in its own CGLayer.

Any CG object that you draw repeatedly—including CGPath, CGShading, and CGPDFPage—benefit from improved performance if you draw it to a CGLayer object.

54.24.4 Methods

54.24.5 Constructor(context as CGContextMBS, size as CGSizeMBS, auxiliaryInfo as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Creates a CGLayer object that is associated with a graphics context.
Notes:

context: The graphics context you want to create the layer relative to. The layer uses this graphics context as a reference for initialization.
size: The size, in default user space units, of the layer relative to the graphics context.
auxiliaryInfo: Reserved for future use. Pass nil.

On Success the handle property is not nil.

After you create a CGLayer object, you should reuse it whenever you can to facilitate the Quartz caching strategy. Quartz caches any objects that are reused, including CGLayer objects. Objects that are reused frequently remain in the cache. In contrast, objects that are used once in a while may be moved in and out of the cache according to their frequency of use. If you don't reuse CGLayer objects, Quartz won't cache them. This means that you lose an opportunity to improve the performance of your application.

Available in Mac OS X version 10.4 and later.

- 54.24.6 Constructor(context as CGContextMBS, width as Double, height as Double, auxiliaryInfo as dictionary = nil) 10506

54.24.6 Constructor(context as CGContextMBS, width as Double, height as Double, auxiliaryInfo as dictionary = nil)

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Creates a CGLayer object that is associated with a graphics context.
Notes:

context: The graphics context you want to create the layer relative to. The layer uses this graphics context as a reference for initialization.
width/height: The size, in default user space units, of the layer relative to the graphics context.

auxiliaryInfo: Reserved for future use. Pass nil.

On Success the handle property is not nil.

After you create a CGLayer object, you should reuse it whenever you can to facilitate the Quartz caching strategy. Quartz caches any objects that are reused, including CGLayer objects. Objects that are reused frequently remain in the cache. In contrast, objects that are used once in a while may be moved in and out of the cache according to their frequency of use. If you don't reuse CGLayer objects, Quartz won't cache them. This means that you lose an opportunity to improve the performance of your application.

Available in Mac OS X version 10.4 and later.
See also:

- 54.24.5 Constructor(context as CGContextMBS, size as CGSizeMBS, auxiliaryInfo as dictionary = nil) 10506

54.24.7 Context as CGContextMBS

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Returns the graphics context associated with a CGLayer object.
Notes: The context that's returned is the context for the layer itself, not the context that you specified when you created the layer.

54.24.8 Size as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Returns the width and height of a CGLayer object.

54.24.9 Properties

54.24.10 Handle as Integer

MBS MacCG Plugin, Plugin Version: 12.2, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

54.25 class CGMutableImageMetadataMBS

54.25.1 class CGMutableImageMetadataMBS

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The class for a mutable tag container.
Notes: Subclass of the CGImageMetadataMBS class.

54.25.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr8

54.25.3 Blog Entries

- MBS Xojo Plugins, version 18.5pr8

54.25.4 Methods

54.25.5 Constructor

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates an empty metadata object.
See also:

- 54.25.6 Constructor(metadata as CGImageMetadataMBS) 10508

54.25.6 Constructor(metadata as CGImageMetadataMBS)

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Copy constructor.
Notes: Creates a copy of the metadata.
See also:

- 54.25.5 Constructor 10508

54.25.7 RegisterNamespaceForPrefix(parent as CGImageMetadataTagMBS = nil, xmlns as String, prefix as String, byref error as CFErrorMBS) as Boolean

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Associates an XMP namespace URI with a prefix string.
Notes:

This allows ImageIO to create custom metadata when it encounters an unrecognized prefix in a path (see TagWithPath for more information about path syntax). A namespace must be registered before it can be used to add custom metadata. All namespaces found in the image's metadata, or defined as a constant above, will be pre-registered. Namespaces and prefixes must be unique.

Returns true if successful. Returns false and sets 'error' if an error or conflict occurs.

54.25.8 RemoveTagWithPath(parent as CGImageMetadataTagMBS = nil, path as string) as Boolean

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the tag at a specific path in a CGMutableImageMetadataMBS container or a parent tag
Notes:

This is the primary function for adding new metadata tags to a metadata container, or updating existing tags. All tags required to reach the final tag (at the end of the path) will be created, if needed. Tags will created with default types (ordered arrays). Creating tags will fail if a prefix is encountered that has not been registered. Use RegisterNamespaceForPrefix to associate a prefix with a namespace prior to using a path-based CGImageMetadataMBS function.

Note that if a parent tag is provided, the children of that tag reference will be modified, which may be a different reference from the tag stored in the metadata container. Since tags are normally obtained as a copy, it is typically neccesary to use SetTagWithPath to commit the changed parent object back to the metadata container (using the parent's path and nil for the parent).

metadata: A mutable collection of metadata tags.
parent: A parent tag. If nil, the path is relative to the root of the metadata (i.e. it is not a child of another property).
Note that if a parent tag is provided, the children of that tag reference will be modified, which may be a different reference from the tag stored in the metadata container. Since tags are normally obtained as a copy, it is typically neccesary to use SetTagWithPath to commit the changed parent object back to the metadata container (using the parent's path and nil for the parent).
path: A string with the path to the desired tag. Please consult the documentation of TagWithPath for information about path syntax.
Value: The CGImageMetadataTagMBS object to be added to the metadata. The tag will be retained.

Returns true if successful, false otherwise.

54.25.9 SetTagWithPath(parent as CGImageMetadataTagMBS = nil, path as string, value as CGImageMetadataTagMBS) as Boolean

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the value of the tag at a specific path in a CGMutableImageMetadataMBS container or a parent tag.
Notes:

This function is used to add new metadata values to a metadata container, or update existing tag values. All tags required to reach the final tag (at the end of the path) are created, if needed. Tags are created with default types (i.e. arrays will be ordered). Creating tags will fail if a prefix is encountered that has not been registered. Use RegisterNamespaceForPrefix to associate a prefix with a namespace prior to using a path-based CGImageMetadata function.

Examples

- 'path' = "xmp:CreateDate", 'value' = "2011-09-20T14:54:47-08:00")
- 'path' = "dc:subject [0] ", 'value' = "San Francisco")
- 'path' = "dc:subject [1] ", 'value' = "Golden Gate Bridge")
- 'path' = "dc:description [en] " 'value' = "my image description")
- 'path' = "dc:description [de] " 'value' = "meine bildbeschreibung")

Note that if a parent tag is provided, the children of that tag reference will be modified, which may be a different reference from the tag stored in the metadata container. Since tags are normally obtained as a copy, it is typically neccesary to use SetTagWithPath to commit the changed parent object back to the metadata container (using the parent's path and "" for the parent).

parent: A parent tag. If nil, the path is relative to the root of the metadata (i.e. it is not a child of another property).
path: A string with the path to the desired tag. Please consult the documentation of TagWithPath for information about path syntax.
value: The value to be added to the CGImageMetadataTag matching the path.

The tag will be retained. The restrictions for the value are the same as in Create.
Returns true if successful, false otherwise.

54.25.10 SetValueMatchingImageProperty(dictionaryName as String, propertyName as String, value as CGImageMetadataTagMBS) as Boolean

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the value of the CGImageMetadataTag matching a kCGImageProperty constant.
Notes:

Provides a bridge for values from CGImageCopyPropertiesAtIndex, simplifying changing property values defined in EXIF and IPTC standards, which have no notion of namespaces, prefixes, or XMP property types.
Metadata Working Group guidance is factored into the mapping of CGImageProperties to XMP compatible CGImageMetadataTags.

For example, setting kCGImagePropertyExifDateTimeOriginal will set the value of the corresponding XMP tag, which is photoshop:DateCreated. Note that property values should still be in their XMP forms, such as "YYYY-MM-DDThh:mm:ss" for DateTime, rather than the EXIF or IPTC DateTime formats. Although this function will allow the caller to set custom values for these properties, you should consult the appropriate specifications for details about property value formats for EXIF and IPTC tags in XMP.

dictionaryName the metadata subdictionary to which the image property belongs, such as kCGImagePropertyExifDictionary or kCGImagePropertyIPTCDictionary. Not all dictionaries and properties are supported at this time.
propertyName the name of the property. This must be a defined property constant corresponding to the 'dictionaryName'. For example, kCGImagePropertyTIFFOrientation, kCGImagePropertyExifDateTimeOriginal, or kCGImagePropertyIPTCKeywords. A warning will be logged if the CGImageProperty is unsupported by CGImageMetadata.
value: A variant with the value for the tag. The same value restrictions apply as in Create.

Returns true if successful, false otherwise.

54.25.11 SetValueWithPath(parent as CGImageMetadataTagMBS = nil, path as string, value as Variant) as Boolean

MBS MacCG Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the value of the tag at a specific path in a CGMutableImageMetadataMBS container or a parent tag.
Notes:

This function is used to add new metadata values to a metadata container, or update existing tag values. All tags required to reach the final tag (at the end of the path) are created, if needed. Tags are created with default types (i.e. arrays will be ordered). Creating tags will fail if a prefix is encountered that has not been registered. Use RegisterNamespaceForPrefix to associate a prefix with a namespace prior to using a path-based CGImageMetadata function.

Examples

- 'path' = "xmp:CreateDate", 'value' = "2011-09-20T14:54:47-08:00")
- 'path' = "dc:subject [0] ", 'value' = "San Francisco")
- 'path' = "dc:subject [1] ", 'value' = "Golden Gate Bridge")
- 'path' = "dc:description [en] " 'value' = "my image description")
- 'path' = "dc:description [de] " 'value' = "meine bildbeschreibung")

Note that if a parent tag is provided, the children of that tag reference will be modified, which may be a different reference from the tag stored in the metadata container. Since tags are normally obtained as a copy, it is typically neccesary to use SetTagWithPath to commit the changed parent object back to the metadata container (using the parent's path and "" for the parent).

parent: A parent tag. If nil, the path is relative to the root of the metadata (i.e. it is not a child of another property).
path: A string with the path to the desired tag. Please consult the documentation of TagWithPath for information about path syntax.
value: The value to be added to the CGImageMetadataTag matching the path.

The tag will be retained. The restrictions for the value are the same as in Create.
Returns true if successful, false otherwise.

54.26 class CGMutablePathMBS

54.26.1 class CGMutablePathMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: A class for a CoreGraphics mutable path.
Notes: Subclass of the CGPathMBS class.

54.26.2 Methods

54.26.3 AddArc(transform as CGAffineTransformMBS, x as Double, y as Double, radius as Double, startAngle as Double, endAngle as Double, clockwise as boolean)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add an arc of a circle to path, possibly preceded by a straight line segment.
Notes: The arc is approximated by a sequence of cubic Bezier curves. (x, y) is the center of the arc; radius is its radius; startAngle is the angle to the first endpoint of the arc; endAngle is the angle to the second endpoint of the arc; and clockwise is true if the arc is to be drawn clockwise, false otherwise. startAngle and endAngle are measured in radians. If m is not nil, then the constructed Bezier curves representing the arc will be transformed by the matrix before they are added to path.

54.26.4 AddArcToPoint(transform as CGAffineTransformMBS, x as Double, y as Double, x2 as Double, y2 as Double, radius as Double)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add an arc of a circle to path, possibly preceded by a straight line segment.
Notes: The arc is approximated by a sequence of cubic Bezier curves. (x, y) is the center of the arc; radius is its radius; startAngle is the angle to the first endpoint of the arc; endAngle is the angle to the second endpoint of the arc; and clockwise is true if the arc is to be drawn clockwise, false otherwise. startAngle and endAngle are measured in radians. If m is not nil, then the constructed Bezier curves representing the arc will be transformed by the matrix before they are added to path.

54.26.5 AddCurveToPoint(transform as CGAffineTransformMBS, cpx1 as Double, cpy1 as Double, cpx2 as Double, cpy2 as Double, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Append a cubic Bezier curve from the current point to (x,y) with control points (cp1x, cp1y) and (cp2x, cp2y) in path and move the current point to (x, y).
Notes: If transform is not nil, then transform all points by the matrix first.

54.26.6 AddEllipseInRect(transform as CGAffineTransformMBS, r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add an ellipse (an oval) inside rect to path.
Notes: The ellipse is approximated by a sequence of Bezier curves. The center of the ellipse is the midpoint of rect. If rect is square, then the ellipse will be circular with radius equal to one-half the width (equivalently, one-half the height) of rect. If rect is rectangular, then the major- and minor-axes will be the width and height of rect. The ellipse forms a complete subpath of path — that is, it begins with a "move to" and ends with a "close subpath" — oriented in the clockwise direction. If transform is not nil, then the constructed Bezier curves representing the ellipse will be transformed by m before they are added to path.

54.26.7 AddLineToPoint(transform as CGAffineTransformMBS, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Append a straight line segment from the current point to (x, y) in the path and move the current point to (x, y).
Notes: If transform is not nil, then transform (x, y) by the matrix first.

54.26.8 AddPath(transform as CGAffineTransformMBS, path as CGPathMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add a path to the path.
Notes: If m is not nil, then the points in the new path will be transformed by the matrix before they are added to path1.

54.26.9 AddQuadCurveToPoint(transform as CGAffineTransformMBS, cpx as Double, cpy as Double, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Append a quadratic curve from the current point to (x, y) with control point (cpx, cpy) in path and move the current point to (x, y'.

Notes: If transform is not nil, then transform all points by the matrix first.

54.26.10 AddRect(transform as CGAffineTransformMBS, r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add rect to path.
Notes: If transform is not nil, then transform the rectangle by the matrix first.

54.26.11 CloseSubpath

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Append a line from the current point to the starting point of the current subpath of path and end the subpath.

54.26.12 Constructor

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Create a mutable path.

54.26.13 ContainsPoint(transform as CGAffineTransformMBS, point as CGPointMBS, eoFill as boolean) as boolean

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return true if point is contained in path; false otherwise.
Notes: A point is contained in a path if it is inside the painted region when the path is filled; if eoFill is true, then the even-odd fill rule is used to evaluate the painted region of the path, otherwise, the winding-number fill rule is used. If m is not nil, then the point is transformed by m before determining whether the path contains it.

54.26.14 MoveToPoint(transform as CGAffineTransformMBS, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Move the current point to (x, y) in path and begin a new subpath.
Notes: If transform is not nil, then transform (x, y) by the matrix first.

54.27 class CGPathElementMBS

54.27.1 class CGPathElementMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: The class for CGPath elements.
Example:

```
dim m as new CGMutablePathMBS

m.MoveToPoint nil, 10, 10
m.AddLineToPoint nil, 20, 30

dim e() as CGPathElementMBS = m.Elements
Break // see in debugger
```

54.27.6 Methods

54.27.7 Point(Index as Integer) as CGPointMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Returns point with given index.

54.27.8 PointX(Index as Integer) as Double

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Returns point x with given index.

54.27.9 PointY(Index as Integer) as Double

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Returns point y with given index.

54.27.10 Properties

54.27.11 PointCount as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Returns number of points in this element.
Notes: (Read and Write property)

54.27.12 Type as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: The type of this element.
Notes: (Read and Write property)

54.27.13 Constants

54.27.14 kTypeAddCurveToPoint = 3

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the type constants.
Notes: The path element that adds a cubic curve from the current point to the specified point. The element

holds two control points and a destination point.

54.27.15 kTypeAddLineToPoint = 1

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the type constants.
Notes: The path element that adds a line from the current point to a new point. The element holds a single point for the destination.

54.27.16 kTypeAddQuadCurveToPoint = 2

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the type constants.
Notes: The path element that adds a quadratic curve from the current point to the specified point. The element holds a control point and a destination point.

54.27.17 kTypeCloseSubpath = 4

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the type constants.
Notes: The path element that closes and completes a subpath. The element does not contain any points.

54.27.18 kTypeMoveToPoint = 0

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the type constants.
Notes: The path element that starts a new subpath. The element holds a single point for the destination.

54.28 class CGPathMBS

54.28.1 class CGPathMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: A class for a CoreGraphics path.

54.28.6 Methods

54.28.7 BoundingBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return the bounding box of path.
Notes: The bounding box is the smallest rectangle completely enclosing all points in the path, including control points for Bezier and quadratic curves. If the path is empty, then return (0,0,0,0).

54.28.8 Copy as CGPathMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Creates a copy of the path.
Notes: Returns nil on any error.

54.28.9 CurrentPoint as CGPointMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return the current point of the current subpath of path.
Notes: If there is no current point, then return (0,0).

54.28.10 Elements as CGPathElementMBS()

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Queries all the elements in a CGPath.
Example:

```
dim m as new CGMutablePathMBS

m.MoveToPoint nil, 10, 10
m.AddLineToPoint nil, 20, 30

dim e() as CGPathElementMBS = m.Elements
Break // see in debugger
```

54.28.11 EqualToPath(path as CGPathMBS) as boolean

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return true if the path self is equal to path; false otherwise.
Notes: Returns false if the path is nil.

54.28.12 IsEmpty as boolean

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return true if path contains no elements, false otherwise.

54.28.13 IsRect(byref rect as CGRectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Return true if path represents a rectangle, false otherwise.

54.28.14 MutableCopy as CGMutablePathMBS

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Create a mutable copy of path.
Notes: Returns nil on any error.

54.28.15 Properties

54.28.16 Handle as Integer

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The handle to the internal used object.
Notes: (Read and Write property)

54.29 class CGPDFArrayMBS

54.29.1 class CGPDFArrayMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf array.

54.29.2 Methods

54.29.3 ArrayValue(index as Integer, byref value as CGPDFArrayMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a pdf array, this function will return it.
Notes: Returns true on success and false on failure.

54.29.4 BooleanValue(index as Integer, byref value as boolean) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a boolean value, this function will return it.
Notes: Returns true on success and false on failure.

54.29.5 Count as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the count of items in this array.

54.29.6 DictionaryValue(index as Integer, byref value as CGPDFDictionaryMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a pdf dictionary, this function will return it.
Notes: Returns true on success and false on failure.

54.29.7 IntegerValue(index as Integer, byref value as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is an integer value, this function will return it.
Notes:

Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

54.29.8 NameValue(index as Integer, byref value as string) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a name string, this function will return it.
Notes: Returns true on success and false on failure.

54.29.9 NullValue(index as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a nil value, this function will return it.
Notes: Returns true on success and false on failure.

54.29.10 ObjectValue(index as Integer, byref value as CGPDFObjectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a pdf object, this function will return it.
Notes: Returns true on success and false on failure.

54.29.11 SingleValue(index as Integer, byref value as Double) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a floating point value, this function will return it.
Notes:

Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

54.29.12 StreamValue(index as Integer, byref value as CGPDFStreamMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a pdf stream, this function will return it.
Notes: Returns true on success and false on failure.

54.29.13 StringValue(index as Integer, byref value as CGPDFStringMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given index is a pdf string, this function will return it.
Notes: Returns true on success and false on failure.

54.29.14 Properties

54.29.15 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Array belongs to.
Notes: (Read only property)

54.29.16 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf array.
Notes: (Read and Write property)

54.30 class CGPDFContextMBS

54.30.1 class CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: A CoreGraphics context for PDF specific functions.
Example:

```
// create pdf
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim r as new CGRectMBS(0,0,500,500)
dim c as CGContextMBS = file.NewCGPDFDocumentMBS(r, "My Title", "My Author", "My Creator")

if c<>Nil then

// create page
c.BeginPage r

// draw something
c.SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
c.FillRect CGMakeRectMBS(100,100,100,100)

// close page
c.EndPage

// flush and show in PDF viewer
c = nil
file.Launch
end if
```

Notes:

This class defines functions to create and get information about a Quartz PDF context. A CGPDFContext object is a type of CGContext that is used for drawing PDF content. The functions in this reference operate only on Quartz PDF graphics contexts created using the functions CGPDFContextCreate or CGPDFContextCreateWithURL.

When you draw to the PDF context using CGContext functions the drawing operations are recorded in PDF format. The PDF commands that represent the drawing are written to the destination specified when you create the PDF graphics context.
Subclass of the CGContextMBS class.

54.30.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr5
- MBS Real Studio Plugins, version 12.0pr6

54.30.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr5
- MBS Real Studio Plugins, version 12.0pr6

54.30.4 Methods

54.30.5 AddDestinationAtPoint(name as string, x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Sets a destination to jump to when a point in the current page of a PDF graphics context is clicked.
Notes:

name: A destination name.
x/y: A location in the current page of the PDF graphics context.
Available in Mac OS X v10.4 and later.

54.30.6 BeginPage(pageInfo as dictionary)

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Begins a new page in a PDF graphics context.
Notes:

pageInfo: A dictionary that contains key-value pairs that define the page properties.

You must call the function EndPage to signal the end of the page.
Available in Mac OS X v10.4 and later.

54.30.7 Close

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Closes a PDF document.
Notes: After closing the context, all pending data is written to the context destination, and the PDF file

is completed. No additional data can be written to the destination context after the PDF document is closed.

54.30.8 EndPage

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Ends the current page in the PDF graphics context.
Notes: You can call EndPage only after you call the function BeginPage.

54.30.9 kCGPDFContextAllowsCopying as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

Whether the document allows copying when unlocked with the user password. The value of this key must be a Boolean object. The default value of this key is true.
Available in Mac OS X v10.4 and later.

54.30.10 kCGPDFContextAllowsPrinting as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

Whether the document allows printing when unlocked with the user password. The value of this key must be a boolean value. The default value of this key is true.
Available in Mac OS X v10.4 and later.

54.30.11 kCGPDFContextArtBox as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that specify various PDF boxes.
Notes:

The art box for the document or for a given page. This key is optional. If present, the value of this key must be a CGRectMBS.
Available in Mac OS X v10.4 and later.

54.30.12 kCGPDFContextAuthor as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

The corresponding value is a string that represents the name of the person who created the document. This key is optional.
Available in Mac OS X v10.4 and later.

54.30.13 kCGPDFContextBleedBox as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that specify various PDF boxes.
Notes:

The bleed box for the document or for a given page. This key is optional. If present, the value of this key must be a CGRectMBS object.
Available in Mac OS X v10.4 and later.

54.30.14 kCGPDFContextCreator as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

The corresponding value is a string that represents the name of the application used to produce the document. This key is optional.
Available in Mac OS X v10.4 and later.

54.30.15 kCGPDFContextCropBox as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that specify various PDF boxes.
Notes:

The crop box for the document or for a given page. This key is optional. If present, the value of this key must be a CGRect object.
Available in Mac OS X v10.4 and later.

54.30.16 kCGPDFContextEncryptionKeyLength as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

The encryption key length in bits; see Table 3.18 "Entries common to all encryption dictionaries", PDF Reference: Adobe PDF version 1.5 (4th ed.) for more information. Optional; if present, the value of this key must be a number with value which is a multiple of 8 between 40 and 128, inclusive. If this key is absent or invalid, the encryption key length defaults to 40 bits.
Available in Mac OS X v10.5 and later.

54.30.17 kCGPDFContextKeywords as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

The keywords for this document. This key is optional. If the value of this key is a string, the /Keywords entry will be the specified string. If the value of this key is a array, then it must be an array of variants with strings. The /Keywords entry will, in this case, be the concatenation of the specified strings separated by commas (","). In addition, an entry with the key "/AAPL:Keywords" is stored in the document information dictionary; its value is an array consisting of each of the specified strings. The value of this key must be in one of the above forms; otherwise, this key is ignored.
Available in Mac OS X v10.5 and later.

54.30.18 kCGPDFContextMediaBox as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that specify various PDF boxes.
Notes:

The media box for the document or for a given page. This key is optional. If present, the value of this key must be a CGRectMBS object.
Available in Mac OS X v10.4 and later.

54.30.19 kCGPDFContextOutputIntent as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.

Notes:

The output intent PDF/X. This key is optional. If present, the value of this key must be a dictionary. The dictionary is added to the /OutputIntents entry in the PDF file document catalog. The keys and values contained in the dictionary must match those specified in section 9.10.4 of the PDF 1.4 specification, ISO/DIS 15930-3 document published by ISO/TC 130, and Adobe Technical Note # 5413.
Available in Mac OS X v10.4 and later.

54.30.20 kCGPDFContextOutputIntents as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

Output intent dictionaries. This key is optional. If present, the value must be an array of one or more kCGPDFContextOutputIntent dictionaries. The array is added to the PDF document in the /OutputIntents entry in the PDF file's document catalog. Each dictionary in the array must be of form specified for the kCGPDFContextOutputIntent key, except that only the first dictionary in the array is required to contain the "S" key with a value of GTS_PDFX. If both the kCGPDFContextOutputIntent and kCGPDFContextOutputIntents keys are specified, the former is ignored.
Available in Mac OS X v10.4 and later.

54.30.21 kCGPDFContextOwnerPassword as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

The owner password of the PDF document. If this key is specified, the document is encrypted using the value as the owner password; otherwise, the document will not be encrypted. The value of this key must be a string that can be represented in ASCII encoding. Only the first 32 bytes are used for the password. There is no default value for this key. If the value of this key cannot be represented in ASCII, the document is not created and the creation function returns nil.
Available in Mac OS X v10.4 and later.

54.30.22 kCGPDFContextSubject as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

The subject of a document. Optional; if present, the value of this key must be a string.
Available in Mac OS X v10.5 and later.

54.30.23 kCGPDFContextTitle as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

The corresponding value is a string that represents the title of the document. This key is optional.
Available in Mac OS X v10.4 and later.

54.30.24 kCGPDFContextTrimBox as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that specify various PDF boxes.
Notes:

The trim box for the document or for a given page. This key is optional. If present, the value of this key must be a memoryblock that contains a CGRect (stored by value, not by reference).
Available in Mac OS X v10.4 and later.

54.30.25 kCGPDFContextUserPassword as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Keys that used to set up a PDF context.
Notes:

The user password of the PDF document. If the document is encrypted, then the value of this key will be the user password for the document. If not specified, the user password is the empty string. The value of this key must be a string that can be represented in ASCII encoding; only the first 32 bytes will be used for the password. If the value of this key cannot be represented in ASCII, the document is not created and the creation function returns nil.
Available in Mac OS X v10.4 and later.

54.30.26 kCGPDFXDestinationOutputProfile as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.
Notes:

An ICC profile stream defining the transformation from the PDF document's source colors to output device colorants. This key is required if the value of kCGPDFXOutputConditionIdentifier does not specify a standard production condition. It is optional otherwise. If present, the value of this key must be an ICC-based color space specified as a CGColorSpaceMBS object.
Available in Mac OS X v10.4 and later.

54.30.27 kCGPDFXInfo as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.
Notes:

A human-readable text string containing additional information or comments about the intended target device or production condition. This key is required if the value of kCGPDFXOutputConditionIdentifier does not specify a standard production condition. It is optional otherwise. If present, the value of this key must be a string.
Available in Mac OS X v10.4 and later.

54.30.28 kCGPDFXOutputCondition as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.
Notes:

A text string identifying the intended output device or production condition in a human- readable form. This key is optional. If present, the value of this key must be a string.
Available in Mac OS X v10.4 and later.

54.30.29 kCGPDFXOutputConditionIdentifier as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.
Notes:

A string identifying the intended output device or production condition in a human- or machine-readable form. This key is required. The value of this key must be a string. For best results, the string should be restricted to characters in the ASCII character set.
Available in Mac OS X v10.4 and later.

54.30.30 kCGPDFXOutputIntentSubtype as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.

54.30.31 kCGPDFXRegistryName as string

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: One of the Output Intent Dictionary Keys.
Notes:

The output intent subtype. This key is required. The value of this key must be a String object equal to "GTS_PDFX"; otherwise, the dictionary is ignored.
Available in Mac OS X v10.4 and later.

54.30.32 SetDestinationForRect(name as string, x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Sets a destination to jump to when a rectangle in the current PDF page is clicked.
Notes:

name: A destination name.
x,y,w,h: A rectangle that specifies an area of the current page of a PDF graphics context. The rectangle is specified in default user space (not device space).
Available in Mac OS X v10.4 and later.

54.30.33 SetURLForRect(url as string, x as Double, y as Double, w as Double, h as Double)

MBS MacCG Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Sets the URL associated with a rectangle in a PDF graphics context.
Example:

```
dim c as CGPDFContextMBS // your pdf context
c.SetURLForRect("http://www.apple.com/", 100, 100, 100, 100)
```

Notes:

url: A string that specifies the destination of the contents associated with the rectangle.
rect: A rectangle specified in default user space (not device space).
Available in Mac OS X v10.4 and later.

54.31 class CGPDFDictionaryListMBS

54.31.1 class CGPDFDictionaryListMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf dictionary list.

54.31.2 Methods

54.31.3 Close

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

54.31.4 Key(index as Integer) as string

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the key with the give index.
Notes: Returns "" on any error.

54.31.5 Value(index as Integer) as CGPDFObjectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The value with the given index.
Notes: Returns nil on any error.

54.31.6 Properties

54.31.7 Count as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the number of key& value pairs.
Notes:

Returns 0 on any error.
(Read only property)

54.31.8 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Dictionary belongs to.
Notes: (Read only property)

54.32 class CGPDFDictionaryMBS

54.32.1 class CGPDFDictionaryMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf dictionary.

54.32.2 Methods

54.32.3 ArrayValue(key as string, byref value as CGPDFArrayMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a pdf array, this function will return it.
Notes: Returns true on success and false on failure.

54.32.4 BooleanValue(key as string, byref value as boolean) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a boolean value, this function will return it.
Notes: Returns true on success and false on failure.

54.32.5 Count as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The number of keys in this dictionary.

54.32.6 DictionaryValue(key as string, byref value as CGPDFDictionaryMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a pdf dictionary, this function will return it.
Notes: Returns true on success and false on failure.

54.32.7 IntegerValue(key as string, byref value as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is an integer value, this function will return it.
Notes:

Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

54.32.8 List as CGPDFDictionaryListMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns a list of all key& value pairs in the dictionary.
Notes: Returns nil on any error.

54.32.9 NameValue(key as string, byref value as string) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a name string, this function will return it.
Notes: Returns true on success and false on failure.

54.32.10 ObjectValue(key as string, byref value as CGPDFObjectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a pdf object, this function will return it.
Notes: Returns true on success and false on failure.

54.32.11 SingleValue(key as string, byref value as Double) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a floating point value, this function will return it.
Notes:

Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

54.32.12 StreamValue(key as string, byref value as CGPDFStreamMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a pdf stream, this function will return it.
Notes: Returns true on success and false on failure.

54.32.13 StringValue(key as string, byref value as CGPDFStringMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object with the given key is a pdf string, this function will return it.
Notes: Returns true on success and false on failure.

54.32.14 Properties

54.32.15 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Dictionary belongs to.
Notes: (Read only property)

54.32.16 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf dictionary.
Notes: (Read and Write property)

54.33 class CGPDFDocumentMBS

54.33.1 class CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics pdf document.
Example:

```
dim f as FolderItem
dim input as CGPDFDocumentMBS
dim output as CGContextMBS
dim r,c as CGRectMBS

f=SpecialFolder.Desktop.Child("test.pdf")
input=f.OpenAsCGPDFDocumentMBS

r=CGMakeRectMBS(0,0,200,200) // 200 by 200 Pixel page

f=SpecialFolder.Desktop.Child("output.pdf")
output=f.NewCGPDFDocumentMBS(r,"SomeTitle","SomeAuthor","SomeCreator")

// Create a new page
output.BeginPage r

// get size of input page one
c=input.CropBox(1)

// clip to a part of the new page leaving a border
r=CGMakeRectMBS(20,20,160,160)
output.ClipToRect r

// draw old pdf on a different position
c.top=-100
c.left=-100

// do the drawing of page one of input at new new output
output.DrawCGPDFDocument(input,c,1)

// cleanup
output.EndPage
output.Flush
```

Notes: If the release property is true, the destructor of this class will release the pdfdocument reference.

54.33.6 Methods

54.33.7 ArtBox(page as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the ArtBox of this page.
Notes:

Returns nil on any error.
This function is deprecated by Apple in favor of using the CGPDFPageMBS class.

54.33.8 BleedBox(page as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the BleedBox of this page.
Notes:

Returns nil on any error.
This function is deprecated by Apple in favor of using the CGPDFPageMBS class.

54.33.9 Catalog as CGPDFDictionaryMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return the document catalog of 'document'.

54.33.10 Constructor(dataProvider as CGDataProviderMBS)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using a data provider.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.

- 54.33.13 Constructor(url as string) 10544

54.33.12 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document object based on the given handle value.
Notes: Handle must not be zero and should be a valid CGPDFDocumentRef casted to integer.
See also:

- 54.33.10 Constructor(dataProvider as CGDataProviderMBS) 10543
- 54.33.11 Constructor(file as folderitem) 10543
- 54.33.13 Constructor(url as string) 10544

54.33.13 Constructor(url as string)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using data specified by a URL.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.
See also:

- 54.33.10 Constructor(dataProvider as CGDataProviderMBS) 10543
- 54.33.11 Constructor(file as folderitem) 10543
- 54.33.12 Constructor(Handle as Integer) 10543

54.33.14 CreateWithData(data as Memoryblock) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using a data.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.
See also:

- 54.33.15 CreateWithData(data as string) as CGPDFDocumentMBS 10544

54.33.15 CreateWithData(data as string) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using a data.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.
See also:

• 54.33.14 CreateWithData(data as Memoryblock) as CGPDFDocumentMBS 10544

54.33.16 CreateWithFile(file as folderitem) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using data specified by a file.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.

54.33.17 CreateWithProvider(dataProvider as CGDataProviderMBS) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using a data provider.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.

54.33.18 CreateWithURL(url as string) as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a Quartz PDF document using data specified by a URL.
Notes: Distributing individual pages of a PDF document to separate threads is not supported. If you want to use threads, consider creating a separate document for each thread and operating on a block of pages per thread.

54.33.19 CropBox(page as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the CropBox of this page.
Notes:

Returns nil on any error.
This function is deprecated by Apple in favor of using the CGPDFPageMBS class.

54.33.20 GetID as CGPDFArrayMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Gets the file identifier for a PDF document.
Notes:

A PDF file identifier is defined in the PDF specification as an array of two strings, the first of which is a permanent identifier that doesn't change even when the file is updated. The second string changes each time the file is updated. For more information, see PDF Reference: Version 1.3 (Second Edition), Adobe Systems Incorporated.

Available in Mac OS X v10.4 and later.

54.33.21 GetInfo as CGPDFDictionaryMBS

MBS MacCG Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: Queries the PDF info dictionary.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as cgpdfdocumentMBS=f.OpenAsCGPDFDocumentMBS

dim Co as CGPDFStringMBS
dim info as CGPDFDictionaryMBS = p.GetInfo
if info.StringValue("Subject",co) then
MsgBox co.Text // shows subject
end if
```

Notes: Returns nil on any error.

54.33.22 MediaBox(page as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the MediaBox of this page.
Notes:

Returns nil on any error.
This function is deprecated by Apple in favor of using the CGPDFPageMBS class.

54.33.23 Page(index as Integer) as CGPDFPageMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns a page of the document.

54.33.24 RotationAngle(page as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the rotation of a page in degrees.
Notes: Returns 0 on any error.

54.33.25 TrimBox(page as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Returns the TrimBox of this page.
Notes:

Returns nil on any error.
This function is deprecated by Apple in favor of using the CGPDFPageMBS class.

54.33.26 UnlockWithPassword(name as string) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return true if 'document' is unlocked; false otherwise.
Notes: A document is unlocked if it isn't encrypted, or if it is encrypted and a valid password was previously specified with CGPDFDocumentUnlockWithPassword.

54.33.27 Properties

54.33.28 AllowsCopying as Boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return true if 'document' allows copying; false otherwise.
Notes:

Typically, this function returns false only if the document is encrypted and the document's current password doesn't grant permission to perform copying.

(Read only property)

54.33.29 AllowsPrinting as Boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return true if 'document' allows printing; false otherwise.
Notes:

Typically, this function returns false only if the document is encrypted and the document's current password doesn't grant permission to perform printing.
(Read only property)

54.33.30 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The handle for this pdfdocument.
Notes:

Handle is a CGPDFDocumentRef.
(Read and Write property)

54.33.31 IsEncrypted as Boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return true if the PDF file associated with 'document' is encrypted; false otherwise.
Notes:

If the PDF file is encrypted, then a password must be supplied before certain operations are enabled; different passwords may enable different operations.
(Read only property)

54.33.32 IsUnlocked as Boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Return true if 'document' is unlocked; false otherwise.
Notes:

A document is unlocked if it isn't encrypted, or if it is encrypted and a valid password was previously specified with CGPDFDocumentUnlockWithPassword.

(Read only property)

54.33.33 MajorVersion as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the major version of the pdf document.
Notes: (Read only property)

54.33.34 MinorVersion as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the minor version of the pdf document.
Notes: (Read only property)

54.33.35 PageCount as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: Counts the pages inside the PDF document.
Example:

```
dim f as FolderItem
dim d as CGPDFDocumentMBS

f=SpecialFolder.Desktop.Child("test.pdf")
d=f.OpenAsCGPDFDocumentMBS

MsgBox str(d.PageCount)
```

Notes:

Returns 0 on any error.
(Read only property)

54.34 class CGPDFObjectMBS

54.34.1 class CGPDFObjectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf object.

54.34.2 Methods

54.34.3 ArrayValue(byref value as CGPDFArrayMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a pdf array, this function will return it.
Notes: Returns true on success and false on failure.

54.34.4 BooleanValue(byref value as boolean) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a boolean, this function will return it.
Notes: Returns true on success and false on failure.

54.34.5 DictionaryValue(byref value as CGPDFDictionaryMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a pdf dictionary, this function will return it.
Notes: Returns true on success and false on failure.

54.34.6 IntegerValue(byref value as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains an integer, this function will return it.
Notes:

Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

54.34.7 NameValue(byref value as string) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a name string, this function will return it.
Notes: Returns true on success and false on failure.

54.34.8 SingleValue(byref value as Double) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a floating point number, this function will return it.
Notes:

Returns true on success and false on failure.
Is function will return double and integer values. Conversion is done automatically.

54.34.9 StreamValue(byref value as CGPDFStreamMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a pdf stream, this function will return it.
Notes: Returns true on success and false on failure.

54.34.10 StringValue(byref value as CGPDFStringMBS) as boolean

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: If the object contains a pdfstring, this function will return it.
Notes: Returns true on success and false on failure.

54.34.11 Type as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the type of the object content.
Notes:

Some useful constants:

kCGPDFObjectTypeNull = 1
kCGPDFObjectTypeBoolean = 2

kCGPDFObjectTypeInteger = 3
kCGPDFObjectTypeReal = 4
kCGPDFObjectTypeName = 5
kCGPDFObjectTypeString = 6
kCGPDFObjectTypeArray = 7
kCGPDFObjectTypeDictionary = 8
kCGPDFObjectTypeStream = 9

54.34.12 Properties

54.34.13 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Object belongs to.
Notes: (Read only property)

54.34.14 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf object.
Notes: (Read and Write property)

54.34.15 Constants

54.34.16 kCGPDFObjectTypeArray = 7

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the type constants for a PDF object type.
Notes: Type for a PDF array.

54.34.17 kCGPDFObjectTypeBoolean = 2

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the type constants for a PDF object type.
Notes: The type for a PDF Boolean.

54.34.18 kCGPDFObjectTypeDictionary = 8

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the type constants for a PDF object type.
Notes: The type for a PDF dictionary.

54.34.19 kCGPDFObjectTypeInteger = 3

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the type constants for a PDF object type.
Notes: The type for a PDF integer.

54.34.20 kCGPDFObjectTypeName = 5

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the type constants for a PDF object type.
Notes: Type for a PDF name.

54.34.21 kCGPDFObjectTypeNull = 1

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the type constants for a PDF object type.
Notes: The type for a PDF null.

54.34.22 kCGPDFObjectTypeReal = 4

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the type constants for a PDF object type.
Notes: The type for a PDF real.

54.34.23 kCGPDFObjectTypeStream = 9

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the type constants for a PDF object type.
Notes: The type for a PDF stream.

54.34.24 kCGPDFObjectTypeString = 6

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the type constants for a PDF object type.
Notes: The type for a PDF string.

54.35 class CGPDFPageMBS

54.35.1 class CGPDFPageMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf page.

54.35.2 Methods

54.35.3 ArtBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the ArtBox of this page.
Notes:

Returns nil on any error.
This is the value of the corresponding entry in the page's dictionary.

54.35.4 BleedBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the BleedBox of this page.
Notes:

Returns nil on any error.
This is the value of the corresponding entry in the page's dictionary.

54.35.5 CropBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the BleedBox of this page.
Notes:

Returns nil on any error.
This is the value of the corresponding entry in the page's dictionary.

54.35.6 Dictionary as CGPDFDictionaryMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The information dictionary of this page.
Notes: Returns nil on any error.

54.35.7 MediaBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the MediaBox of this page.
Notes:

Returns nil on any error.
This is the value of the corresponding entry in the page's dictionary.

54.35.8 PageNumber as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The page number of this page.

54.35.9 RotationAngle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the rotation of a page in degrees.
Notes: This is the value of the /Rotate entry in the page's dictionary.

54.35.10 TrimBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the TrimBox of this page.
Notes:

Returns nil on any error.
This is the value of the corresponding entry in the page's dictionary.

54.35.11 Properties

54.35.12 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Page belongs to.
Notes: (Read only property)

54.35.13 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf page.
Notes: (Read and Write property)

54.35.14 Constants

54.35.15 kCGPDFArtBox=4

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the box types for a PDF page.
Notes:

The page art box—a rectangle, expressed in default user space units, defining the extent of the page's meaningful content (including potential white space) as intended by the page's creator.

Available in Mac OS X v10.3 and later.

54.35.16 kCGPDFBleedBox=2

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the box types for a PDF page.
Notes:

The page bleed box—a rectangle, expressed in default user space units, that defines the region to which the contents of the page should be clipped when output in a production environment

Available in Mac OS X v10.3 and later.

54.35.17 kCGPDFCropBox=1

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the box types for a PDF page.
Notes:

The page crop box—a rectangle, expressed in default user space units, that defines the visible region of default user space. When the page is displayed or printed, its contents are to be clipped to this rectangle.

Available in Mac OS X v10.3 and later.

54.35.18 kCGPDFMediaBox=0

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the box types for a PDF page.
Notes:

The page media box—a rectangle, expressed in default user space units, that defines the boundaries of the physical medium on which the page is intended to be displayed or printed

Available in Mac OS X v10.3 and later.

54.35.19 kCGPDFTrimBox=3

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the box types for a PDF page.
Notes:

The page trim box—a rectangle, expressed in default user space units, that defines the intended dimensions of the finished page after trimming.

Available in Mac OS X v10.3 and later.

54.36 class CGPDFStreamMBS

54.36.1 class CGPDFStreamMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf stream.

54.36.2 Methods

54.36.3 Data(byref format as Integer) as string

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The data of this pdf stream.
Notes:

Format is set to one of the following constants:

CGPDFDataFormatRaw	0
CGPDFDataFormatJPEGEncoded	1
CGPDFDataFormatJPEG2000	2

Returns nil on any error.

54.36.4 Dictionary as CGPDFDictionaryMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The information dictionary for this stream.
Notes: Returns nil on any error.

54.36.5 Properties

54.36.6 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF Stream belongs to.
Notes: (Read only property)

54.36.7 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf stream.
Notes: (Read and Write property)

54.36.8 Constants

54.36.9 CGPDFDataFormatJPEG2000=2

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the data format constants.

54.36.10 CGPDFDataFormatJPEGEncoded=1

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the data format constants.

54.36.11 CGPDFDataFormatRaw=0

MBS MacCG Plugin, Plugin Version: 9.5.

Function: One of the data format constants.

54.37 class CGPDFStringMBS

54.37.1 class CGPDFStringMBS

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for a pdf string.

54.37.2 Methods

54.37.3 Bytes as MemoryBlock

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The bytes of this pdf string.
Notes:

Returns nil on any error.
This memoryblock is not encoding safe!

54.37.4 Length as Integer

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The length of the text.

54.37.5 Text as string

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The text of the pdf string as a string.
Notes:

In contrast to the bytes in the memoryblock, this String is encoding save.
Returns nil on any error.

54.37.6 Properties

54.37.7 Document as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The document this PDF String belongs to.
Notes: (Read only property)

54.37.8 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The handle of the pdf string.
Notes: (Read and Write property)

54.38 class CGPointMBS

54.38.1 class CGPointMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics point.

54.38.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

54.38.3 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

54.38.4 Methods

54.38.5 ApplyAffineTransform(p as CGAffineTransformMBS) as CGPointMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Transform 'point' by 't' and return the result: p' = p * t where p = [x y 1] .

54.38.6 Binary as MemoryBlock

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the internal data of the object as a CGPoint for use on Toolbox calls.
Example:

```
dim c as CGPointMBS
dim m as MemoryBlock

c=CGMakePointMBS(10,20)

m=c.Binary

MsgBox str(m.Size) // 8
MsgBox str(m.doubleValue( 0)) // 10
MsgBox str(m.doubleValue( 4)) // 20
```

54.38.7 Constructor

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new point object with the given values.
See also:

- 54.38.8 Constructor(p as Ptr) 10564
- 54.38.9 Constructor(source as CGPointMBS) 10564
- 54.38.10 Constructor(x as Double, y as Double) 10564

54.38.8 Constructor(p as Ptr)

MBS MacCG Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates a new instance using data at the pointer.
Notes: Make sure the pointer is valid and has the right data and size.
See also:

- 54.38.7 Constructor 10564
- 54.38.9 Constructor(source as CGPointMBS) 10564
- 54.38.10 Constructor(x as Double, y as Double) 10564

54.38.9 Constructor(source as CGPointMBS)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new point object with the given values.
See also:

- 54.38.7 Constructor 10564
- 54.38.8 Constructor(p as Ptr) 10564
- 54.38.10 Constructor(x as Double, y as Double) 10564

54.38.10 Constructor(x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new point object with the given values.
See also:

- 54.38.7 Constructor 10564

- 54.38.8 Constructor(p as Ptr) 10564
- 54.38.9 Constructor(source as CGPointMBS) 10564

54.38.11 Equal(p as CGPointMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns true if both points are equal.

54.38.12 Make(x as Double, y as Double) as CGPointMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns a new CGPointMBS object.

54.38.13 Zero as CGPointMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the zero point.
Notes: The "zero" point – equivalent to CGMakePointMBS(0, 0).

54.38.14 Properties

54.38.15 x as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The X property of the point.
Notes: (Read and Write property)

54.38.16 y as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The Y property of the point.
Notes: (Read and Write property)

54.39 class CGPSConverterMBS

54.39.1 class CGPSConverterMBS

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class in CoreGraphics to convert Postscript code to PDF data.
Notes: Requires Mac OS X 10.3.

54.39.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr10

54.39.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr10

54.39.4 Methods

54.39.5 Abort as boolean

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Tell the converter to abort conversion at the next possible opportunity.
Notes: Returns false on any error and true on success.

54.39.6 Constructor(options as Dictionary = nil)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Create a CGPSConverter.
Notes:

Currently you should pass nil for options. (Mac OS X 10.3)
On failure the handle property is zero.

54.39.7 Convert(provider as CGDataProviderMBS, consumer as CGDataConsumerMBS, options as Dictionary = nil) as boolean

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Converts PostScript data to PDF data.
Notes:

The PostScript data is supplied by provider; the resulting PDF is written to consumer. Returns true if the conversion succeeded; false otherwise.

54.39.8 IsConverting as boolean

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if the converter is currently converting data.
Notes: False on any error.

54.39.9 Properties

54.39.10 Handle as Integer

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The hande to the CGPSConverter object.
Notes:

Datatype is CGPSConverterRef.
(Read and Write property)

54.39.11 Events

54.39.12 BeginDocument

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: .

Function: Is called at the beginning of the conversion of the PostScript document.

54.39.13 BeginPage(PageNumber as Integer, PageInfo as Dictionary)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: .

Function: Called at the start of the conversion of each page in the PostScript document.

54.39.14 EndDocument(success as boolean)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: .

Function: Called at the end of conversion of the PostScript document.

54.39.15 EndPage(PageNumber as Integer, PageInfo as Dictionary)

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: .

Function: Called at the end of the conversion of each page in the PostScript document.

54.39.16 Finished

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: .

Function: Called when the converter is no longer needed.

54.39.17 Message(message as string)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: .

Function: Called to pass any messages that might result during the conversion.

54.39.18 Progress

MBS MacCG Plugin, Plugin Version: 4.3, Platform: macOS, Targets: .

Function: Called periodically during the conversion to indicate that conversion is proceeding.

54.40 class CGRectMBS

54.40.1 class CGRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics rectangle.

54.40.2 Blog Entries

- 6.4, page 30: Creating PDF Files, How to create PDFs using the MBS Plugins by Christian Schmitz

54.40.6 Methods

54.40.7 ApplyAffineTransform(a as CGAffineTransformMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: All.

Function: Applies an affine transform to the rectangle and returns the result.
Example:

```
dim af as CGAffineTransformMBS = CGAffineTransformMBS.Identity

MsgBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

af = af.Scale( 1, -1 )

MsgBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

af = af.Translate( 0, 100 )
```

```
MsgBox str(af.A)+" "+str(af.b)+" "+str(af.c)+" "+str(af.d)+" "+str(af.tx)+" "+str(af.ty)

dim r1 as CGRectMBS
dim r2 as CGRectMBS

r1=CGMakeRectMBS(100,100,100,100)

r2=r1.ApplyAffineTransform(af)

MsgBox "("+str(r1.Left)+", "+str(r1.top)+", "+str(r1.width)+", "+str(r1.height)+") =>("+str(r2.Left)+",
"+str(r2.top)+", "+str(r2.width)+", "+str(r2.height)+")"
```

Notes: Returns nil on any error.

54.40.8 Binary as MemoryBlock

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the internal data of the object as a CGRect for use on Toolbox calls.
Example:

```
dim c as CGRectMBS
dim m as MemoryBlock

c=CGMakeRectMBS(10,20,30,40)

m=c.Binary

MsgBox str(m.Size) // 16
MsgBox str(m.doubleValue( 0)) // 10
MsgBox str(m.doubleValue( 4)) // 20
MsgBox str(m.doubleValue( 8)) // 30
MsgBox str(m.doubleValue(12)) // 40
```

54.40.9 Constructor

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The constructor to create a zero rectangle.
See also:

- 54.40.10 Constructor(p as Ptr)

- 54.40.11 Constructor(source as CGRectMBS) 10571
- 54.40.12 Constructor(x as Double, y as Double, width as Double, height as Double) 10571

54.40.10 Constructor(p as Ptr)

MBS MacCG Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates a new instance using data at the pointer.
Notes: Make sure the pointer is valid and has the right data and size.
See also:

- 54.40.9 Constructor 10570
- 54.40.11 Constructor(source as CGRectMBS) 10571
- 54.40.12 Constructor(x as Double, y as Double, width as Double, height as Double) 10571

54.40.11 Constructor(source as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGRectMBS object by copying the values.
See also:

- 54.40.9 Constructor 10570
- 54.40.10 Constructor(p as Ptr) 10571
- 54.40.12 Constructor(x as Double, y as Double, width as Double, height as Double) 10571

54.40.12 Constructor(x as Double, y as Double, width as Double, height as Double)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a new CGRectMBS object with the given values.
See also:

- 54.40.9 Constructor 10570
- 54.40.10 Constructor(p as Ptr) 10571
- 54.40.11 Constructor(source as CGRectMBS) 10571

54.40.13 ContainsPoint(r as CGPointMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return true if 'point' is contained in the rect, false otherwise.

54.40.14 ContainsRect(r as CGRectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return true if 'rect2' is contained in 'rect1', false otherwise.
Notes:

'rect2' is contained in 'rect1' if the union of 'rect1' and 'rect2' is equal to 'rect1'.
(rect1 is the current rect and rect2 the rect you pass to this function)

54.40.15 Divide(byref slice as CGRectMBS, byref remainder as CGRectMBS, amount as Double, edge as Integer)

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Divides the rectangle.
Notes: Make two new rectangles, 'slice' and 'remainder', by dividing the rect with a line that's parallel to one of its sides, specified by 'edge' – either 'CGRectMinXEdge', 'CGRectMinYEdge', 'CGRectMaxXEdge', or 'CGRectMaxYEdge'. The size of 'slice' is determined by 'amount', which measures the distance from the specified edge.

54.40.16 Equal(r as CGRectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns true if both rectangles are equal.

54.40.17 Infinite as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: A rectangle that has infinite extent.
Example:

```
dim r as CGRectMBS = CGRectMBS.Infinite
MsgBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: Available in Mac OS X v10.4 and later.

54.40.18 Inset(dx as Double, dy as Double) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Inset the rect by '(dx, dy)' – i.e., offset its origin by '(dx, dy)', and decrease its size by '(2*dx, 2*dy)'

54.40.19 Integral as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Expand the rect to the smallest rect containing it with integral origin and size.

54.40.20 Intersection(r as CGRectMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the intersection of both rectangles.
Notes: This may return a null rect.

54.40.21 IntersectsRect(r as CGRectMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return true if 'rect1' intersects 'rect2', false otherwise.
Notes: 'rect1' intersect 'rect2' if the intersection of 'rect1' and 'rect2' is not the null rect.

54.40.22 IsEmpty as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return true if the rect is empty – i.e., if it has zero width or height.
Notes: A null rect is defined to be empty.

54.40.23 IsInfinite as boolean

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns whether a rectangle is infinite.
Notes:

Returns true if the specified rectangle is infinite, false otherwise.

An infinite rectangle is one that has no defined bounds. Infinite rectangles can be created as output from a tiling filter. For example, the Core Image framework perspective tile filter creates an image whose extent is described by an infinite rectangle.

54.40.24 IsNull as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return true if the rect is null – e.g., the result of intersecting two disjoint rectangles is a null rect.

54.40.25 Make(x as Double, y as Double, width as Double, height as Double) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns a new CGRectMBS object with the given values.
Example:

```
dim r as CGRectMBS = CGRectMBS.Make(1,2,3,4)
MsgBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

54.40.26 MaxX as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the rightmost x-value of the rect.
Example:

```
dim r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MsgBox str(r.MaxX) // 40
```

54.40.27 MaxY as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the topmost y-value of the rect.
Example:

```
dim r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MsgBox str(r.MaxY) // 60
```

54.40.28 MidX as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the midpoint x-value of the rect.
Example:

```
dim r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MsgBox str(r.MidX) // 25
```

54.40.29 MidY as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the midpoint y-value of the rect.
Example:

```
dim r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MsgBox str(r.MidY) // 40
```

54.40.30 MinX as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the leftmost x-value of the rect.
Example:

```
dim r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MsgBox str(r.MinX) // 10
```

54.40.31 MinY as Double

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the bottommost y-value of the rect.
Example:

```
dim r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MsgBox str(r.MinY) // 20
```

54.40.32 Null as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the null rect.
Example:

```
dim r as CGRectMBS = CGRectMBS.Null
MsgBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes:

The "empty" rect. This is the rectangle returned when, for example, we intersect two disjoint rectangles. Note that the null rect is not the same as the zero rect.

54.40.33 Offset(dx as Double, dy as Double) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Offset the rect by '(dx, dy)'.

54.40.34 Standardize as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Standardize the rect – i.e., convert it to an equivalent rect which has positive width and height.
Example:

```
dim r as CGRectMBS = CGRectMBS.Make(5, 6, -3, -2)
MsgBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
r = r.Standardize
MsgBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

54.40.35 Union(r as CGRectMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the union of both rectangles.
Example:

```
dim r as CGRectMBS = CGRectMBS.Infinite
MsgBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

54.40.36 Zero as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: A rectangle constant with location (0,0), and width and height of 0.
Example:

```
dim r as CGRectMBS = CGRectMBS.Zero
MsgBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: The zero rectangle is equivalent to CGRectMBS.Make(0,0,0,0).

54.40.37 Properties

54.40.38 height as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The height property of the rectangle.
Example:

```
dim r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MsgBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: (Read and Write property)

54.40.39 left as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The left property of the rectangle.
Notes: (Read and Write property)

54.40.40 Origin as CGPointMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The origin of the rectangle.
Example:

```
dim r as CGRectMBS = CGRectMBS.Make(5, 6, 3, 2)
dim s as CGPointMBS = r.Origin
MsgBox str(s.x)+" x "+str(s.y)
```

Notes: (Read and Write property)

54.40.41 Size as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The size of the rectangle.
Example:

```
dim r as CGRectMBS = CGRectMBS.Make(5, 6, 3, 2)
dim s as CGSizeMBS = r.Size
MsgBox str(s.Width)+" x "+str(s.Height)
```

Notes: (Read and Write property)

54.40.42 top as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The top property of the rectangle.
Example:

```
dim r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
```

```
MsgBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: (Read and Write property)

54.40.43 width as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The width property of the rectangle.
Example:

```
dim r as CGRectMBS = CGMakeRectMBS(10, 20, 30, 40)
MsgBox str(r.Left)+" "+str(R.Top)+" "+str(R.Width)+" "+str(r.Height)
```

Notes: (Read and Write property)

54.41 class CGSConnectionMBS

54.41.1 class CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a connection to the CoreGraphics System.
Example:

```
dim c as new CGSConnectionMBS
dim list as CGSWindowListMBS = c.GetWindowList

dim names() as string
dim u as Integer = List.Count-1
for i as Integer = 0 to u
dim w as CGSWindowMBS = List.Item(i)
names.append w.Title
next

MsgBox str(List.Count)+" windows: "+Join(names, ", ")
```

Notes:

Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

54.41.2 Blog Entries

- MBS REALbasic Plugins, version 11.0fc1

54.41.3 Blog Entries

- MBS REALbasic Plugins, version 11.0fc1

54.41.4 Methods

54.41.5 CGSWindow(w as window) as CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a CGSWindow reference to a normal RB window.
Notes: Can be used for the CGSTransitionRequestMBS.Win property.

54.41.6 CGSWindowbyHandle(windowhandle as Integer) as CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

Function: Returns a CGSWindow reference to any window where you can have a handle.
Notes:

WindowHandle must be of C type WindowRef. Not a CGS Window Handle.
Can be used for the handle from an OverlayWindowMBS.

54.41.7 FlushAllWindows

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: Flushes all windows.
Notes:

Walks over the window list (of the current process) and does a flush on each window.
Lasterror is set.

54.41.8 FlushAllWindowsForAllOtherProceses

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: Flushes all windows.
Notes:

Walks over the list of processes asking each for its window list and doing a flush on each window. The own process is ignored.
Lasterror is set.

54.41.9 FlushAllWindowsForAllProceses

MBS MacCG Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: Flushes all windows.
Notes:

Walks over the list of processes asking each for its window list and doing a flush on each window.
Lasterror is set.

54.41.10 GetOnScreenWindowList as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Returns the list of windows on screen for the current process.
Notes: Returns nil on any error.

54.41.11 GetOnScreenWindowListForProcess(PID as Integer) as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Returns the list of windows on screen for the process with the given Process ID.
Notes: Returns nil on any error.

54.41.12 GetWindowList as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Returns the list of windows for the current process.
Notes: Returns nil on any error.

54.41.13 GetWindowListForProcess(PID as Integer) as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Returns the list of windows for the process with the given Process ID.
Notes: Returns nil on any error.

54.41.14 NewTransition(request as CGSTransitionRequestMBS) as CGSTransitionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new transition.
Notes:

Lasterror is set.
Request must be a valid object reference.
Transitions seem not to work in Carbon PEF builds. MachO works.

54.41.15 RunTransition(request as CGSTransitionRequestMBS, duration as single)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A method to run a transition for the given request and given time.
Example:

```
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim cw as CGSWindowMBS

co=new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSFlip
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw
co.RunTransition(r,2)
```

Notes:

Lasterror is set.
Transitions seem not to work in Carbon PEF builds. MachO works.

54.41.16 SetWorkspaceWithTransition(workspace as CGSWorkspaceMBS, transition as Integer, type as Integer, time as single)

MBS MacCG Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Performs a transition with a workspace specified by the workspace object.
Notes:

The values for the parameters are not documented on the web except that the transition and type property may use the same transition constants as for the other transitions.
Lasterror is set.
See also:

- 54.41.17 SetWorkspaceWithTransition(workspace as Integer, transition as Integer, type as Integer, time as single) 10584

54.41.17 SetWorkspaceWithTransition(workspace as Integer, transition as Integer, type as Integer, time as single)

MBS MacCG Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Performs a transition with a workspace specified by the workspace number.
Example:

```
dim c as new CGSConnectionMBS
dim t as new CGSTransitionRequestMBS

// from space 1 to 2
c.SetWorkspaceWithTransition(2,t.CGSFade, t.CGSInOut, 5)

// but transition and time are ignored on testing Mac.

MsgBox str(c.Lasterror)
```

Notes:

The values for the parameters are not documented on the web except that the transition and type property may use the same transition constants as for the other transitions.
Lasterror is set.
See also:

- 54.41.16 SetWorkspaceWithTransition(workspace as CGSWorkspaceMBS, transition as Integer, type as Integer, time as single) 10583

54.41.18 Properties

54.41.19 Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle for this connection.
Notes: (Read and Write property)

54.41.20 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last error code reported.
Notes:

The list of CoreGraphics error (from Mac OS X 10.4)

kCGErrorSuccess	= 0	Success
kCGErrorFailure	= 1000	Failure
kCGErrorIllegalArgument	= 1001	Illegal Argument
kCGErrorInvalidConnection	= 1002	Invalid Connection
kCGErrorInvalidContext	= 1003	Invalid Context
kCGErrorCannotComplete	= 1004	Cannot complete
kCGErrorNameTooLong	= 1005	Name is too long
kCGErrorNotImplemented	= 1006	Not implemented
kCGErrorRangeCheck	= 1007	Out of bounds
kCGErrorTypeCheck	= 1008	Type error
kCGErrorNoCurrentPoint	= 1009	No current point
kCGErrorInvalidOperation	= 1010	Invalid Operation
kCGErrorNoneAvailable	= 1011	internal errors have taken 1012 1013 and 1014
kCGErrorApplicationRequiresNewerSystem	= 1015	the application being launched says in it's bundle info that it requires a newer version of the system than is currently running.
kCGErrorApplicationNotPermittedToExecute	= 1016	Macintosh Manager is active and this application is not permitted to run
kCGErrorApplicationIncorrectExecutableFormatFound	= 1023	the application being launched does not have any executable code for the current system.
kCGErrorApplicationIsLaunching	= 1024	The application is in the process of launching but hasn't checked in yet. Any launch data provided will be given to the application when it does check in.
kCGErrorApplicationAlreadyRunning	= 1025	The application being launched was already running (and had already checked in) and so any launch data provided can not be delivered to in by CPS
kCGErrorApplicationCanOnlyBeRunInOneSessionAtATime	= 1026	The application being launched is incompatible with multiple user sessions and is already running in another session by another user.
kCGErrorClassicApplicationsMustBeLaunchedByClassic	= 1027	To avoid deadlock Classic can't launch another Classic application by going thru CPS. This error gets returned in that case and it signals TruBlueEnvironment that it must handle this launch on its own.
kCGErrorForkFailed	= 1028	CPS was unable to fork a new process in order to launch an application.

(Read and Write property)

54.41.21 Workspace as CGSWorkspaceMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The workspace this connection is pointing to.
Notes: (Read and Write computed property)

54.42 class CGScreenRefreshEventMBS

54.42.1 class CGScreenRefreshEventMBS

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: The class to receive events for screen updates.

54.42.2 Properties

54.42.3 Initialized as Boolean

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: Whether object is initialized correctly.
Notes:

Should be true on OS X if initializing was done.
(Read only property)

54.42.4 Events

54.42.5 ScreenRefresh(rectCount as Integer, rects() as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

Function: The event to inform you about a screen refresh.
Notes:

When an area of the display is modified or refreshed, this event function will be invoked with a count of the number of rectangles in the refreshed areas, and a list of the refreshed rectangles. The rectangles are in global coordinates.

Quartz invokes this event when operations such as drawing, window movement, scrolling, or display reconfiguration occur on local displays.

Note that a single rectangle may occupy multiple displays, either by overlapping the displays or by residing on coincident displays when mirroring is active. You can use the function CGDisplayMBS.GetDisplaysWithRect to determine the displays a rectangle occupies.

54.43 class CGScreenUpdateMoveEventMBS

54.43.1 class CGScreenUpdateMoveEventMBS

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: The class to get event when something on screen changes.

54.43.2 Properties

54.43.3 Initialized as Boolean

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: Whether object is initialized correctly.
Notes:

This should be true on Mac after calling constructor.
(Read only property)

54.43.4 Events

54.43.5 ScreenMove(deltaX as Integer, deltaY as Integer, rectCount as Integer, rects() as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

Function: The event invoked when an area of the display is moved.
Notes:

When an area of the display is moved, your callback function will be invoked with a count of the number of rectangles in the moved area, and a list of the moved rectangles. The rectangles are in global coordinates, and describe the area prior to the move operation.

A single rectangle may occupy multiple displays, either by overlapping the displays or by residing on coincident displays when mirroring is active. Use CGDisplayMBS.GetDisplaysWithRect to determine the displays a rectangle occupies.

DeltaX/DeltaY: The distance a region on the screen moves in pixel units.

The fields deltaX and deltaY describe the direction of movement. Positive values of deltaX indicate movement to the right; negative values indicate movement to the left. Positive values of deltaY indicate movement downward; negative values indicate movement upward.

54.44 class CGSessionMBS

54.44.1 class CGSessionMBS

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class to hold some values about the current CoreGraphics session.
Example:

```
dim c as CGSessionMBS = CGSessionMBS
MsgBox c.UserName
```

Notes: You need to call the CGSessionMBS global method to get a valid object of this class (with values).

54.44.2 Properties

54.44.3 ConsoleSet as Integer

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Value is a 32 bit unsigned integer value representing a set of hardware composing a console.
Example:

```
dim c as CGSessionMBS = CGSessionMBS

MsgBox str(c.ConsoleSet)
```

Notes: (Read only property)

54.44.4 LoginDone as Boolean

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: True if login operation has been done, otherwise False.
Example:

```
dim c as CGSessionMBS = CGSessionMBS

MsgBox str(c.LoginDone)
```

Notes: (Read only property)

54.44.5 OnConsole as Boolean

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: True if the session is on a console, otherwise False.
Example:

```
dim c as CGSessionMBS = CGSessionMBS

MsgBox str(c.OnConsole)
```

Notes: (Read only property)

54.44.6 UserID as Integer

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The user id for the session's current user.
Example:

```
dim c as CGSessionMBS = CGSessionMBS

MsgBox str(c.UserID)
```

Notes: (Read only property)

54.44.7 UserName as String

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: The session's short user name as set by loginwindow.
Example:

```
dim usr as CGSessionMBS
usr=CGSessionMBS
msgbox usr.UserName
```

Notes: (Read only property)

54.45 class CGShadingMBS

54.45.1 class CGShadingMBS

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: To shade means to fill using a smooth transition between colors across an area. Quartz shadings simplify several common shading operations. Quartz shadings currently support radial and axial gradient fills.
Notes: To paint with a Quartz shading, you call CGContextMBS.DrawShading. This function fills the current clipping path using the specified color gradient, calling your parametric function repeatedly as it draws.

54.45.2 Blog Entries

- MBS Real Studio Plugins, version 13.1fc1

54.45.3 Blog Entries

- MBS Real Studio Plugins, version 13.1fc1

54.45.4 Properties

54.45.5 Handle as Integer

MBS MacCG Plugin, Plugin Version: 6.2, Platform: macOS, Targets: All.

Function: Handle to the CGShadingRef.
Notes: (Read and Write property)

54.46 class CGSizeMBS

54.46.1 class CGSizeMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: A class for a core graphics size.

54.46.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

54.46.3 Xojo Developer Magazine

- 12.2, page 45: Moving to AVFoundation, Leaving QuickTime behind by Christian Schmitz

- 12.2, page 45: Moving to AVFoundation, Leaving QuickTime behind by Christian Schmitz

54.46.6 Methods

54.46.7 ApplyAffineTransform(p as CGAffineTransformMBS) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Transform 'size' by 't' and return the result: s' = s * t where s = [width height 0] .

54.46.8 Binary as MemoryBlock

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the internal data of the object as a CGSize for use on Toolbox calls.
Example:

```
dim c as CGSizeMBS
dim m as MemoryBlock
```

```
c=CGMakeSizeMBS(10,20)

m=c.Binary

MsgBox str(m.Size) // 8
MsgBox str(m.doubleValue( 0)) // 10
MsgBox str(m.doubleValue( 4)) // 20
```

54.46.9 Constructor

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates an zero size object.
See also:

- 54.46.10 Constructor(p as Ptr) 10594
- 54.46.11 Constructor(source as CGSizeMBS) 10594
- 54.46.12 Constructor(width as Double, height as Double) 10595

54.46.10 Constructor(p as Ptr)

MBS MacCG Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates a new instance using data at the pointer.
Notes: Make sure the pointer is valid and has the right data and size.
See also:

- 54.46.9 Constructor 10594
- 54.46.11 Constructor(source as CGSizeMBS) 10594
- 54.46.12 Constructor(width as Double, height as Double) 10595

54.46.11 Constructor(source as CGSizeMBS)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: The constructor which copies the values from the other size object.
See also:

- 54.46.9 Constructor 10594

- 54.46.10 Constructor(p as Ptr) 10594
- 54.46.12 Constructor(width as Double, height as Double) 10595

54.46.12 Constructor(width as Double, height as Double)

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Creates a size object with the given values.
See also:

- 54.46.9 Constructor 10594
- 54.46.10 Constructor(p as Ptr) 10594
- 54.46.11 Constructor(source as CGSizeMBS) 10594

54.46.13 Equal(p as CGSizeMBS) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns true if two CGSize objects are equal.

54.46.14 Make(width as Double, height as Double) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns a new CGSizeMBS object with the given values.

54.46.15 Zero as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 9.5, Platform: macOS, Targets: All.

Function: Returns the zero size.
Notes: The "zero" size – equivalent to CGSizeMBS.Make(0, 0).

54.46.16 Properties

54.46.17 height as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The height property of the point.
Notes: (Read and Write property)

54.46.18 width as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The width property of the point.
Notes: (Read and Write property)

54.47 class CGSTransitionMBS

54.47.1 class CGSTransitionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a transition to the CoreGraphics System.
Notes:

Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

54.47.2 Methods

54.47.3 Invoke(duration as single)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Performs the transition.
Example:

```
// cube transition for the whole screen
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property

co=new CGSConnectionMBS

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSCube
r.TransitionOption=r.CGSLeft
r.HasBackGround=true
r.HasBackColor=false

ct=co.NewTransition(r)
if ct<>Nil then
window1.refresh // draw new screen
ct.invoke 5
ct.wait 5
ct.release
else
MsgBox "Error creating the transition."
end if
```

Notes:

duration is the time in seconds the duration will need to complete.
Lasterror is set.

54.47.4 Release

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Releases the transaction.
Example:

```
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property
dim cw as CGSWindowMBS

co=new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSCube
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw

ct=co.NewTransition(r)
if ct<>Nil then
window1.refresh // draw new screen
ct.invoke 5
ct.wait 5
ct.release
else
MsgBox "Error creating the transition."
end if
```

Notes:

Lasterror is set.
Must be called after performing a transition, but not before the transition is finished.

54.47.5 Run(duration as single)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Runs a transition effect for the given duration.
Example:

```
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property
dim cw as CGSWindowMBS

co=new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSCube
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw

ct=co.NewTransition(r)
if ct<>Nil then
window1.Refresh // draw new window

ct.run(2)
else
MsgBox "Error creating the transition."
end if
```

Notes: Same as calling Invoke, Wait and Release.

54.47.6 Wait(duration as single)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Waits the given time in second.
Example:

```
// instead of wait(5) you can do this to give time to other threads and timers of your application:

dim ct as CGSTransitionMBS
dim t as Integer
```

```
t=ticks+300 // 60th of a second * 300 = 5 seconds

while ticks<t
ct.wait(0.1)
app.YieldToNextThread
wend
```

Notes: All the CPU time is given away to other applications to give maximum performance to the transition.

54.47.7 Properties

54.47.8 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The reference to the connection used.
Notes:

Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

54.47.9 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the CGS connection being used.
Notes:

Most of the functions need this value and it needs to be not zero.
(Read and Write property)

54.47.10 Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle for this transition.
Notes: (Read and Write property)

54.47.11 Screenshots

54.47.12 CGS1.jpg

Function: A cube transition running on the whole desktop with black background.

54.47.13 CGS2.jpg

Function: A flip transition running on a window. (like Dashboard)

54.47.14 CGS3.jpg

Function:

A wrap transition running on the window.

54.47.15 CGS4.jpg

Function: A cube transition running on a window with black background.

54.47.16 CGS5.jpg

Function: A cube transition running on the whole desktop with blue background.

54.47.17 CGS6.jpg

Function: A cube transition running on the whole desktop.

54.48 class CGSTransitionRequestMBS

54.48.1 class CGSTransitionRequestMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a transition request to the CoreGraphics System.
Notes:

Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

54.48.2 Methods

54.48.3 Run(duration as single) as boolean

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Runs a transition.
Example:

```
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim cw as CGSWindowMBS // global property

co=new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSCube
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw
call r.run(5)
```

Notes:

Lasterror is set.
Transitions seem not to work in Carbon PEF builds. MachO works.

54.48.4 Properties

54.48.5 Blue as Single

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Blue part of the backcolor.
Notes:

Range is from 0.0 (no color) to 1.0 (full color).
(Read and Write property)

54.48.6 Green as Single

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Green part of the backcolor.
Notes:

Range is from 0.0 (no color) to 1.0 (full color).
(Read and Write property)

54.48.7 HasBackColor as Boolean

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the background on the transition has a color.
Example:

```
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSWarpSwitch
r.TransitionOption=r.CGSLeft
r.HasBackGround=true
r.HasBackColor=true
r.red=0 // all zero is black, all one is white
r.Blue=0
r.Green=0

ct=co.NewTransition(r)
if ct<>Nil then
window1.Refresh
ct.Invoke(2)
```

```
ct.Wait(2)
ct.Release
else
MsgBox "Error creating the transition."
end if
```

Notes: (Read and Write property)

54.48.8 HasBackGround as Boolean

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether you want to use the background or not.
Example:

```
dim r as new CGSTransitionRequestMBS
r.HasBackGround=false // best for a window in place transition
```

Notes:

If HasBackGround is true, a background is drawn behind the transition which may have a background color.
(Read and Write property)

54.48.9 Red as Single

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Red part of the backcolor.
Notes:

Range is from 0.0 (no color) to 1.0 (full color).
(Read and Write property)

54.48.10 TransitionOption as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The transition options to use.
Example:

```
dim r as CGSTransitionRequestMBS
```

r.TransitionOption=r.CGSLeft

Notes:

One of the constants:

CGSDown	= 0	Old desktop moves down.
CGSLeft	= 1	Old desktop moves left.
CGSRight	= 2	Old desktop moves right.
CGSInRight	= 3	CGSSwap: Old desktop moves into screen, new comes from right.
CGSBottomLeft	= 5	CGSSwap: Old desktop moves to bottom left, new comes from top right.
CGSBottomRight	= 6	Old desktop to bottom right, New from top left.
CGSDownTopRight	= 7	CGSSwap: Old desktop moves down, new from top right.
CGSUp	= 8	Old desktop moves up.
CGSTopLeft	= 9	Old desktop moves top left.
CGSTopRight	= 10	CGSSwap: old to top right. new from bottom left.
CGSUpBottomRight	= 11	CGSSwap: old desktop up, new from bottom right.
CGSInBottom	= 12	CGSSwap: old in, new from bottom.
CGSLeftBottomRight	= 13	CGSSwap: old one moves left, new from bottom right.
CGSRightBottomLeft	= 14	CGSSwap: old one moves right, new from bottom left.
CGSInBottomRight	= 15	CGSSwap: onl one in, new from bottom right.
CGSInOut	= 16	CGSSwap: old in, new out.

(Read and Write property)

54.48.11 TransitionType as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The transition to use.
Notes:

One of the constants:

(Read and Write property)

54.48.12 Win as CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The window to use for the transition.
Notes:

CGSNone	= 0	No transition effect.
CGSFade	= 1	Cross-fade.
CGSZoom	= 2	Zoom/fade towards us.
CGSReveal	= 3	Reveal new desktop under old.
CGSSlide	= 4	Slide old out and new in.
CGSWarpFade	= 5	Warp old and fade out revealing new.
CGSSwap	= 6	Swap desktops over graphically.
CGSCube	= 7	The well-known cube effect.
CGSWarpSwitch	= 8	Warp old, switch and un-warp.
CGSFlip	= 9	The flip effect known from Dashboard

Set to nil to do a full screen transition.
(Read and Write property)

54.48.13 Constants

54.48.14 CGSBottomLeft = 5

MBS MacCG Plugin, Plugin Version: 7.4.

Function: CGSSwap: Old desktop moves to bottom left, new comes from top right.

54.48.15 CGSBottomRight = 6

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Old desktop to bottom right, New from top left.

54.48.16 CGSCube = 7

MBS MacCG Plugin, Plugin Version: 7.4.

Function: The well-known cube effect.

54.48.17 CGSDown = 0

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Old desktop moves down.

54.48.18 CGSDownTopRight = 7

MBS MacCG Plugin, Plugin Version: 7.4.

Function: CGSSwap: Old desktop moves down, new from top right.

54.48.19 CGSFade = 1

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Cross-fade effect.

54.48.20 CGSFlip = 9

MBS MacCG Plugin, Plugin Version: 7.4.

Function: The flip transition effect. (like Dashboard)
Example:

```
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property
dim cw as CGSWindowMBS

co=new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSFlip
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw

ct=co.NewTransition(r)
if ct<>Nil then
window1.Refresh
ct.Invoke(1)
ct.Wait(1)
ct.Release
```

```
else
MsgBox "Error creating the transition."
end if
```

54.48.21 CGSInBottom = 12

MBS MacCG Plugin, Plugin Version: 7.4.

Function: CGSSwap: old in, new from bottom.

54.48.22 CGSInBottomRight = 15

MBS MacCG Plugin, Plugin Version: 7.4.

Function: CGSSwap: onl one in, new from bottom right.

54.48.23 CGSInOut = 16

MBS MacCG Plugin, Plugin Version: 7.4.

Function: CGSSwap: old in, new out.

54.48.24 CGSInRight = 3

MBS MacCG Plugin, Plugin Version: 7.4.

Function: CGSSwap: Old desktop moves into screen, new comes from right.

54.48.25 CGSLeft = 1

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Old desktop moves left.

54.48.26 CGSLeftBottomRight = 13

MBS MacCG Plugin, Plugin Version: 7.4.

Function: CGSSwap: old one moves left, new from bottom right.

54.48.27 CGSNone = 0

MBS MacCG Plugin, Plugin Version: 7.4.

Function: No transition effect.

54.48.28 CGSReveal = 3

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Reveal new desktop under old.

54.48.29 CGSRight = 2

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Old desktop moves right.
Example:

```
// flip transition for the window
dim r as CGSTransitionRequestMBS
dim co as new CGSConnectionMBS
dim w as CGSWindowMBS = co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSFlip
r.TransitionOption=r.CGSRight
r.HasBackGround=false
r.HasBackColor=false
r.Win=w

dim ct as CGSTransitionMBS = co.NewTransition(r)
if ct<>Nil then
PagePanel1.Value = 0
Refresh

ct.invoke 0.5
ct.wait 0.5
ct.release
end if
```

54.48.30 CGSRightBottomLeft = 14

MBS MacCG Plugin, Plugin Version: 7.4.

Function: CGSSwap: old one moves right, new from bottom left.

54.48.31 CGSSlide = 4

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Slide old out and new in.
Example:

```
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property
dim cw as CGSWindowMBS

co=new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSSlide
r.TransitionOption=r.CGSLeft
r.win=cw

ct=co.NewTransition(r)
if ct<>Nil then
window1.Refresh
ct.Run(2)
else
MsgBox "Error creating the transition."
end if
```

54.48.32 CGSSwap = 6

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Swap desktops over graphically.

54.48.33 CGSTopLeft = 9

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Old desktop moves top left.

54.48.34 CGSTopRight = 10

MBS MacCG Plugin, Plugin Version: 7.4.

Function: CGSSwap: old to top right. new from bottom left.

54.48.35 CGSUp = 8

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Old desktop moves up.

54.48.36 CGSUpBottomRight = 11

MBS MacCG Plugin, Plugin Version: 7.4.

Function: CGSSwap: old desktop up, new from bottom right.

54.48.37 CGSWarpFade = 5

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Warp old and fade out revealing new.
Example:

```
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property
dim cw as CGSWindowMBS

co=new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSWarpFade
```

```
r.TransitionOption=r.CGSLeft
r.win=cw

ct=co.NewTransition(r)
if ct<>Nil then
window1.Refresh
ct.Run(2)
else
MsgBox "Error creating the transition."
end if
```

54.48.38 CGSWarpSwitch = 8

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Warp old, switch and un-warp.
Example:

```
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property
dim cw as CGSWindowMBS

co=new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSWarpSwitch
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw

ct=co.NewTransition(r)
if ct<>Nil then
window1.Refresh
ct.Invoke(5)
ct.Wait(5)
ct.Release
else
MsgBox "Error creating the transition."
end if
```

54.48.39 CGSZoom = 2

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Zoom/fade towards us.

54.49 class CGSValueMBS

54.49.1 class CGSValueMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a value to the CoreGraphics System.
Notes:

Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

54.49.2 Methods

54.49.3 IntegerValue as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The integer value of this object.

54.49.4 StringValue as string

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The string value of this object.

54.49.5 Properties

54.49.6 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The reference to the connection used.
Notes:

Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

54.49.7 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the CGS connection being used.
Notes:

Most of the functions need this value and it needs to be not zero.
(Read and Write property)

54.49.8 Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal used handle.
Notes: (Read and Write property)

54.50 class CGSWindowListMBS

54.50.1 class CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: An array of CGSWindowMBS objects.
Example:

```
dim c as new CGSConnectionMBS
dim list as CGSWindowListMBS = c.GetWindowList

dim names() as string
dim u as Integer = List.Count-1
for i as Integer = 0 to u
dim w as CGSWindowMBS = List.Item(i)
names.append w.Title
next

MsgBox str(List.Count)+" windows: "+Join(names, ", ")
```

54.50.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr1

54.50.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr1

54.50.4 Methods

54.50.5 Item(index as Integer) as CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the window with the given index.
Notes: Index is from 0 to count-1.

54.50.6 Properties

54.50.7 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The reference to the connection used.
Notes:

Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

54.50.8 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the CGS connection being used.
Notes:

Most of the functions need this value and it needs to be not zero.
(Read and Write property)

54.50.9 Count as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of CGSWindow objects in that array.
Notes: (Read and Write property)

54.50.10 Handle as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the window list.
Notes: (Read and Write property)

54.51 class CGSWindowMBS

54.51.1 class CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a window in the CoreGraphics System.
Notes:

Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

To find all processes on Mac, use the ProcessMBS class.
To find all windows on Windows, use the WindowsListMBS class.

Not official supported by Apple and some effects don't work well on latest OS X versions!

54.51.2 Methods

54.51.3 Flush

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Flushes this window.
Example:

```
dim co as CGSConnectionMBS
dim cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(window1)

cw.Flush
```

Notes: Lasterror is set.

54.51.4 Height as Double

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The height of this window.

Example:

```
dim co as CGSConnectionMBS
dim cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(window1)

MsgBox str(cw.height)
```

54.51.5 Left as Double

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The left position of this window.
Example:

```
dim co as CGSConnectionMBS
dim cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(window1)

MsgBox str(cw.left)
```

54.51.6 Level as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The window level of this window.
Notes: See WindowGroupMBS.level or OverlayWindow.Level for details.

54.51.7 Move(byref x as single, byref y as single)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves the window.

54.51.8 Order(mode as Integer, relativeToWindow as CGSWindowMBS=nil)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reorders the window.
Notes:

Lasterror is set.
Mode must be kCGSOrderAbove, kCGSOrderBelow or kCGSOrderOut.

54.51.9 Title as string

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The window title.

54.51.10 Top as Double

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The top position of this window.
Example:

```
dim co as CGSConnectionMBS
dim cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(window1)

MsgBox str(cw.top)
```

Notes: In Pixel from the top of the screen.

54.51.11 Uncover

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Uncovers the window.
Notes: Lasterror is set.

54.51.12 Warp(w as Integer, h as Integer, value as memoryblock)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the wrap of a window.
Example:

```
dim w,h as Integer
dim m as memoryblock
dim localx,localy, gobalx,gobaly as Integer
dim offset as Integer

m=newmemoryblock(w*h*16)
// for each row
// for each point in row
m.SingleValue(offset)=localx
offset=offset+4
m.SingleValue(offset)=localy
offset=offset+4
m.SingleValue(offset)=gobalx
offset=offset+4
m.SingleValue(offset)=gobaly
offset=offset+4
```

Notes:

the memoryblock must be of size w*h*sizeof(single)*4.
a single is 4 bytes, so this is 16*w*h
w is the number of horizontal points you define.
h is the number of vertical points you define.

Basicly you define for a local point in the window the point onscreen where it is moved to. See the example project for more details.

54.51.13 Width as Double

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The width of this window.
Example:

```
dim co as CGSConnectionMBS
dim cw as CGSWindowMBS

co=new CGSConnectionMBS
```

cw=co.CGSWindow(window1)

MsgBox str(cw.width)

54.51.14 Workspace as CGSWorkspaceMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The workspace where this window is part of.

54.51.15 Properties

54.51.16 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The reference to the connection used.
Notes:

Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

54.51.17 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the CGS connection being used.
Notes:

Most of the functions need this value and it needs to be not zero.
(Read and Write property)

54.51.18 Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The window handle.
Notes:

This is not a WindowRef or a NSWindow pointer!

(Read and Write property)

54.51.19 LastError as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last error code reported.
Notes:

The list of CoreGraphics error (from Mac OS X 10.4)

kCGErrorSuccess	= 0	Success
kCGErrorFailure	= 1000	Failure
kCGErrorIllegalArgument	= 1001	Illegal Argument
kCGErrorInvalidConnection	= 1002	Invalid Connection
kCGErrorInvalidContext	= 1003	Invalid Context
kCGErrorCannotComplete	= 1004	Cannot complete
kCGErrorNameTooLong	= 1005	Name is too long
kCGErrorNotImplemented	= 1006	Not implemented
kCGErrorRangeCheck	= 1007	Out of bounds
kCGErrorTypeCheck	= 1008	Type error
kCGErrorNoCurrentPoint	= 1009	No current point
kCGErrorInvalidOperation	= 1010	Invalid Operation
kCGErrorNoneAvailable	= 1011	internal errors have taken 1012 1013 and 1014
kCGErrorApplicationRequiresNewerSystem	= 1015	the application being launched says in it's bundle info that it requires a newer version of the system than is currently running.
kCGErrorApplicationNotPermittedToExecute	= 1016	Macintosh Manager is active and this application is not permitted to run
kCGErrorApplicationIncorrectExecutableFormatFound	= 1023	the application being launched does not have any executable code for the current system.
kCGErrorApplicationIsLaunching	= 1024	The application is in the process of launching but hasn't checked in yet. Any launch data provided will be given to the application when it does check in.
kCGErrorApplicationAlreadyRunning	= 1025	The application being launched was already running (and had already checked in) and so any launch data provided can not be delivered to in by CPS
kCGErrorApplicationCanOnlyBeRunInOneSessionAtATime	= 1026	The application being launched is incompatible with multiple user sessions and is already running in another session by another user.
kCGErrorClassicApplicationsMustBeLaunchedByClassic	= 1027	To avoid deadlock Classic can't launch another Classic application by going thru CPS. This error gets returned in that case and it signals TruBlueEnvironment that it must handle this launch on its own.
kCGErrorForkFailed	= 1028	CPS was unable to fork a new process in order to launch an application.

(Read and Write property)

54.51.20 AffineTransform as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The transformation of this window.
Example:

```
// rotates the window.
dim a as CGAffineTransformMBS
```

```
a=CGAffineTransformMBS.MakeRotation(1)

a=a.Translate(-Width,-Height)

dim co as CGSConnectionMBS
dim cw as CGSWindowMBS

co=new CGSConnectionMBS
cw=co.CGSWindow(window1)

cw.AffineTransform=a
```

Notes:

Lasterror is set.
(Read and Write computed property)

54.51.21 Alpha as single

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The alpha value for this window.
Example:

```
dim cw as CGSWindowMBS
dim co as new CGSConnectionMBS

cw=co.CGSWindow(window1)
cw.Alpha=0.2

// same as:

// self.TransparencyMBS=0.2
```

Notes:

0 is invisible and 1.0 is visible.

You may prefer to use the window TransparencyMBS property instead as it uses documented APIs.
(Read and Write computed property)

54.51.22 EventMask as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event mask of this window.
Notes: (Read and Write computed property)

54.51.23 Constants

54.51.24 kCGSOrderAbove = 1

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Window is ordered above target.

54.51.25 kCGSOrderBelow = -1

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Window is ordered below target.

54.51.26 kCGSOrderOut = 0

MBS MacCG Plugin, Plugin Version: 7.4.

Function: Window is removed from the on-screen.

54.52 class CGSWorkspaceMBS

54.52.1 class CGSWorkspaceMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a workspace to the CoreGraphics System.
Notes:

Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

Not official supported by Apple and some effects don't work well on latest OS X versions!

54.52.2 Methods

54.52.3 GetWorkspaceWindowList as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Returns the list of windows for this workspace.
Notes: Returns nil on any error.

54.52.4 MoveWindows(target as CGSWorkspaceMBS)

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves all windows from one workspace to another.
Notes: Lasterror is set.

54.52.5 Properties

54.52.6 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The reference to the connection used.
Notes:

Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.

(Read only property)

54.52.7 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the CGS connection being used.
Notes:

Most of the functions need this value and it needs to be not zero.
(Read and Write property)

54.52.8 Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal used handle to the workspace.
Notes: (Read and Write property)

54.52.9 LastError as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last error code reported.
Notes:

The list of CoreGraphics error (from Mac OS X 10.4)

(Read and Write property)

kCGErrorSuccess	= 0	Success
kCGErrorFailure	= 1000	Failure
kCGErrorIllegalArgument	= 1001	Illegal Argument
kCGErrorInvalidConnection	= 1002	Invalid Connection
kCGErrorInvalidContext	= 1003	Invalid Context
kCGErrorCannotComplete	= 1004	Cannot complete
kCGErrorNameTooLong	= 1005	Name is too long
kCGErrorNotImplemented	= 1006	Not implemented
kCGErrorRangeCheck	= 1007	Out of bounds
kCGErrorTypeCheck	= 1008	Type error
kCGErrorNoCurrentPoint	= 1009	No current point
kCGErrorInvalidOperation	= 1010	Invalid Operation
kCGErrorNoneAvailable	= 1011	internal errors have taken 1012 1013 and 1014
kCGErrorApplicationRequiresNewerSystem	= 1015	the application being launched says in it's bundle info that it requires a newer version of the system than is currently running.
kCGErrorApplicationNotPermittedToExecute	= 1016	Macintosh Manager is active and this application is not permitted to run
kCGErrorApplicationIncorrectExecutableFormatFound	= 1023	the application being launched does not have any executable code for the current system.
kCGErrorApplicationIsLaunching	= 1024	The application is in the process of launching but hasn't checked in yet. Any launch data provided will be given to the application when it does check in.
kCGErrorApplicationAlreadyRunning	= 1025	The application being launched was already running (and had already checked in) and so any launch data provided can not be delivered to in by CPS
kCGErrorApplicationCanOnlyBeRunInOneSessionAtATime	= 1026	The application being launched is incompatible with multiple user sessions and is already running in another session by another user.
kCGErrorClassicApplicationsMustBeLaunchedByClassic	= 1027	To avoid deadlock Classic can't launch another Classic application by going thru CPS. This error gets returned in that case and it signals TruBlueEnvironment that it must handle this launch on its own.
kCGErrorForkFailed	= 1028	CPS was unable to fork a new process in order to launch an application.

54.53 module CGWindowMBS

54.53.1 module CGWindowMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: This module contains CoreGraphics functions related to windows.
Example:

```
// screenshot of all windows on screens
Backdrop = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, 0, 0, 0)
```

54.53.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr3

54.53.3 Blog Entries

- MBS Real Studio Plugins, version 11.2pr3

54.53.4 Methods

54.53.5 CreateWindowList(windowOption as Integer, WindowID as Integer = 0) as UInt32()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns the list of window IDs associated with the specified windows in the current user session.
Example:

```
dim a(-1) as UInt32 = CGWindowMBS.CreateWindowList(0,0)

MsgBox str(UBound(a)+1) + " windows"
```

Notes:

windowOption: The options describing which window IDs to return. Typical options let you obtain IDs for all windows or for windows above or below the window specified in the relativeToWindow parameter.

WindowID: The ID of the window to use as a reference point when determining which other windows to return. For options that do not require a reference window, this parameter can be kCGNullWindowID.

Returns an array of CGWindowID values corresponding to the desired windows. If there are no windows matching the desired criteria, the function returns an empty array. If you call this function from outside of a GUI security session or when no window server is running, this function returns nil.

Available in Mac OS X v10.5 and later.

May fail and cause a consent prompt on MacOS 10.15 to ask user whether he/she allows your app to take the picture.

54.53.6 CreateWindowListCGImage(left as Double, top as Double, width as Double, height as Double, windowOption as Integer, WindowID as Integer = 0, ImageOption as Integer = 0) as Variant

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Takes a screenshot from a list of windows.
Notes:

Same as CreateWindowListImage, but returns a CGImageMBS. Declared as Variant to reduce plugin interdependencies.

May fail and cause a consent prompt on MacOS 10.15 to ask user whether he/she allows your app to take the picture.

54.53.7 CreateWindowListImage(left as Double, top as Double, width as Double, height as Double, windowOption as Integer, WindowID as Integer = 0, ImageOption as Integer = 0) as picture

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Takes a screenshot from a list of windows.
Example:

```
dim p as Picture

// Screenshot of everything:
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionAll,0,
CGWindowMBS.kCGWindowImageDefault)

// Screenshot of everything behind a window:
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionOnScreen-
BelowWindow, CGWindowMBS.GetWindowID(window1), CGWindowMBS.kCGWindowImageDefault)
```

```
// Screenshot of everything in front of a window (dock and menubar):
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionOnScreen-
AboveWindow, CGWindowMBS.GetWindowID(window1), CGWindowMBS.kCGWindowImageDefault)

// screenshot of a window
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionInclud-
ingWindow, CGWindowMBS.GetWindowID(window1), CGWindowMBS.kCGWindowImageDefault)

// only shadow of a window (will be in the mask)
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionInclud-
ingWindow, CGWindowMBS.GetWindowID(window1), CGWindowMBS.kCGWindowImageOnlyShadows)

// desktop decoration is white
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListExcludeDesk-
topElements, CGWindowMBS.GetWindowID(window1), CGWindowMBS.kCGWindowImageShouldBeOpaque)
```

Notes:

Parameters:

left	Left coordinate rectangle
top	Top coordinate rectangle
width	Width of rectangle
height	Height of rectangle
windowOption	A combination of kCGWindowListOption* flags
WindowID	The window ID or 0.
ImageOption	A combination of kCGWindowImage* flags

If you pass a rectangle with all values zero, you select the whole screen.
Returns the screenshot as picture or nil on any error.

Window Options:

Image Options:

May fail and cause a consent prompt on MacOS 10.15 to ask user whether he/she allows your app to take the picture.

kCGWindowListOptionAll	0	List all windows in this user session, including both on and off-screen windows. relativeToWindow should be kCGNullWindowID=0.
kCGWindowListOptionOnScreenOnly	1	List all on-screen windows in this user session, ordered from front to back. relativeToWindow should be kCGNullWindowID=0.
kCGWindowListOptionOnScreenAboveWindow	2	List all on-screen windows above the specified window ordered from front to back. relativeToWindow should be the window number.
kCGWindowListOptionOnScreenBelowWindow	4	List all on-screen windows below the specified window ordered from front to back. relativeToWindow should be the window number.
kCGWindowListOptionIncludingWindow	8	Include the named window in any list, effectively creating 'at-or-above' or 'at-or-below' lists. relativeToWindow should be the window number.
kCGWindowListExcludeDesktopElements	16	Exclude any windows from the list that are elements of the desktop, including the background picture and icons on the desktop.

kCGWindowImageDefault	0	Default behavior: If a rect of CGRectNull is used bounds computation includes the framing effects, such as a shadow.
kCGWindowImageBoundsIgnoreFraming	1	If a rect of CGRectNull is used, ignore framing effects for bounds computation
kCGWindowImageShouldBeOpaque	2	The captured image should be opaque. Empty areas are white
kCGWindowImageOnlyShadows	4	Capture only shadows.

54.53.8 GetWindowID(w as DesktopWindow) as integer

MBS MacFrameworks Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Queries the CoreGraphics Window ID for the given window.
Notes:

Returns 0 on any error.
This ID can be used for CreateWindowListImage.
See also:

- 54.53.9 GetWindowID(w as window) as Integer 10637

54.53.9 GetWindowID(w as window) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Queries the CoreGraphics Window ID for the given window.
Notes:

Returns 0 on any error.
This ID can be used for CreateWindowListImage.
See also:

- 54.53.8 GetWindowID(w as DesktopWindow) as integer 10637

54.53.10 GetWindowListInfo(windowOption as Integer, WindowID as Integer = 0) as dictionary()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Generates and returns information about the selected windows in the current user session.
Example:

```
dim a(-1) as Dictionary = CGWindowMBS.GetWindowListInfo(0,0)

dim u as Integer = UBound(a)
if u >10 then u = 10 // show only 10 times

dim lines(-1) as string
for i as Integer = 0 to u
dim d as Dictionary = a(i)

lines.Append d.Value(CGWindowMBS.kCGWindowName)+" of "+d.Value(CGWindowMBS.kCGWindowOwnerName)

next

// shows 11 windows with names. Not all windows have names.
MsgBox Join(lines, EndOfLine)
```

Notes:

option: The options describing which window dictionaries to return. Typical options let you return dictionaries for all windows or for windows above or below the window specified in the relativeToWindow parameter. For more information, see "Window List Option Constants."

WindowID: The ID of the window to use as a reference point when determining which other window dictionaries to return. For options that do not require a reference window, this parameter can be 0.

Returns an array of CFDictionaryRef types, each of which contains information about one of the windows in the current user session. If there are no windows matching the desired criteria, the function returns an empty array. If you call this function from outside of a GUI security session or when no window server is running, this function returns nil.

You can use this function to get detailed information about the configuration of one or more windows in the current user session. For example, you can use this function to get the bounds of the window, its window ID, and information about how it is managed by the window server. For the list of keys and values that may be present in the dictionary, see kCGWindow* constants.

Generating the dictionaries for system windows is a relatively expensive operation. As always, you should

profile your code and adjust your usage of this function appropriately for your needs.

Available in Mac OS X v10.5 and later.

54.53.11 Constants

54.53.12 kCGBackingStoreBuffered = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the backing store constants.

54.53.13 kCGBackingStoreNonretained = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the backing store constants.

54.53.14 kCGBackingStoreRetained = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the backing store constants.

54.53.15 kCGNullWindowID = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: The number for an invalid window ID.

54.53.16 kCGWindowAlpha = "kCGWindowAlpha"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Notes: The alpha fade of the window. The value of this key is a floating-point value. The value 1.0 is normal (opaque); the value 0.0 is fully transparent (invisible).

54.53.17 kCGWindowBackingLocationVideoMemory = "kCGWindowBackingLocationVideoMemory"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Notes: Optional. If present, true if the window backing store is in video memory, false otherwise. If the key is not present, then the window backing store is in main memory. The value of this key is a Boolean.

54.53.18 kCGWindowBounds = "kCGWindowBounds"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Example:

```
dim a(-1) as Dictionary = CGWindowMBS.GetWindowListInfo(CGWindowMBS.kCGWindowListOptionOnScreenOnly,0)

//cycle thru window names and get window size

for each d as Dictionary in a
dim windowname as string = d.Lookup(CGWindowMBS.kCGWindowName, "")
if Instr(1,windowname,"Play") >0 then
dim bounds as Dictionary = d.Lookup(CGWindowMBS.kCGWindowBounds,nil)

dim x as Integer = bounds.Lookup("X", 0)
dim y as Integer = bounds.Lookup("Y", 0)
dim w as Integer = bounds.Lookup("Width", 0)
dim h as Integer = bounds.Lookup("Height", 0)

MsgBox "Found window at "+str(x)+"/"+str(y)+" with size "+str(w)+"/"+str(h)
end if
next
```

Notes: The bounds of the window in screen space, with the origin at the upper-left corner of the main display. The value of this key is a Dictionary.

54.53.19 kCGWindowImageBoundsIgnoreFraming = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the image options constants.
Notes: If null rect is passed as the screen bounds, then then bounds computation excludes window frame

ornamentation, such as a shadow.

54.53.20 kCGWindowImageDefault = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the image options constants.
Notes: If null rectangle is passed as the screen bounds, then then bounds computation includes window frame ornamentation, such as a shadow.

54.53.21 kCGWindowImageOnlyShadows = 4

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the image options constants.
Notes: Only draw the windows' shadows, not the windows themselves.

54.53.22 kCGWindowImageShouldBeOpaque = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the image options constants.
Notes: Force the created image to be opaque. Empty areas are white.

54.53.23 kCGWindowIsOnscreen = "kCGWindowIsOnscreen"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Notes: Optional. If present, true if the window is ordered on screen, false otherwise. If the key is not present, then the window is not ordered on screen. The value of this key is a boolean.

54.53.24 kCGWindowLayer = "kCGWindowLayer"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Notes: The window layer number of the window. The value of this key is a 32-bit signed integer value.

54.53.25 kCGWindowListExcludeDesktopElements = 16

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the window list option constants.
Notes: Exclude any windows from the list that are elements of the desktop.

54.53.26 kCGWindowListOptionAll = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the window list option constants.
Notes: List all windows in this user session, including both on- and off-screen windows. The parameter WindowID should be kCGNullWindowID.

54.53.27 kCGWindowListOptionIncludingWindow = 8

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the window list option constants.
Notes: Include the window specified by WindowID in any list, effectively creating 'at-or-above' or 'at-or-below' lists.

54.53.28 kCGWindowListOptionOnScreenAboveWindow = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the window list option constants.
Notes: List all on-screen windows above the window specified by WindowID, ordered from front to back.

54.53.29 kCGWindowListOptionOnScreenBelowWindow = 4

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the window list option constants.
Notes: List all on-screen windows below the window specified by WindowID, ordered from front to back.

54.53.30 kCGWindowListOptionOnScreenOnly = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the window list option constants.
Notes: List all on-screen windows in this user session, ordered from front to back. The parameter WindowID should be kCGNullWindowID.

54.53.31 kCGWindowMemoryUsage = "kCGWindowMemoryUsage"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Notes: An estimate of the memory in bytes currently used by the window and its supporting data structures. The value of this key is a 64-bit signed integer value.

54.53.32 kCGWindowName = "kCGWindowName"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Example:

```
// find window with containing "Play" in name.
dim a(-1) as Dictionary = CGWindowMBS.GetWindowListInfo(CGWindowMBS.kCGWindowListOptionOn-
ScreenOnly, 0)

for each d as Dictionary in a
dim windowname as string = d.Lookup(CGWindowMBS.kCGWindowName, "")
if Instr(1,windowname,"Play") >0 then
msgBox "I found it and the ID is "+d.Lookup(CGWindowMBS.kCGWindowNumber, "")
end if
next
```

Notes: Optional. If present, the name of the window. The value of this key is a string.

54.53.33 kCGWindowNumber = "kCGWindowNumber"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Example:

```
// find window with containing "Play" in name.
dim a(-1) as Dictionary = CGWindowMBS.GetWindowListInfo(CGWindowMBS.kCGWindowListOptionOn-
ScreenOnly, 0)
```

```
for each d as Dictionary in a
dim windowname as string = d.Lookup(CGWindowMBS.kCGWindowName, "")
if Instr(1,windowname,"Play") >0 then
msgBox "I found it and the ID is "+d.Lookup(CGWindowMBS.kCGWindowNumber, "")
end if
next
```

Notes: The window ID, a unique value within the user session representing the window. The value of this key is a 32-bit signed integer value.

54.53.34 kCGWindowOwnerName = "kCGWindowOwnerName"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Notes: Optional. If present, the name of the application process which owns the window. The value of this key is a string.

54.53.35 kCGWindowOwnerPID = "kCGWindowOwnerPID"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Notes: The process ID of the process that owns the window. The value of this key is a 32-bit signed integer value.

54.53.36 kCGWindowSharingNone = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the sharing state constants.
Notes: No sharing.

54.53.37 kCGWindowSharingReadOnly = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the sharing state constants.
Notes: Read only.

54.53.38 kCGWindowSharingReadWrite = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the sharing state constants.
Notes: Read and Write

54.53.39 kCGWindowSharingState = "kCGWindowSharingState"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Notes: The sharing state of the window, one of kCGWindowSharingNone, kCGWindowSharingReadOnly, or kCGWindowSharingReadWrite. The value of this key is a 32-bit signed integer value.

54.53.40 kCGWindowStoreType = "kCGWindowStoreType"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Notes: The backing store type of the window, one of kCGBackingStoreRetained, kCGBackingStoreNonretained, or kCGBackingStoreBuffered. The value of this key is a 32-bit signed integer value.

54.53.41 kCGWindowWorkspace = "kCGWindowWorkspace"

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the possible keys in the window info dictionary.
Notes: Optional. If present, the workspace ID of the workspace associated with the window. The value of this key is a 32-bit signed integer value.

54.54 class QDPictMBS

54.54.1 class QDPictMBS

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to draw QuickDraw PICT data to a CoreGraphics context.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Note: QuickDraw picture data typically comes in two forms: a PICT resource that begins the picture header data at the beginning of the resource and PICT files that begin with 512 bytes of arbitrary data, followed by the picture header data. For this reason, the routines that create a QTPict object attempt to find the picture header data beginning at either the first byte of the data provided or at byte 513 of the data provided.

Additionally the Picture Bounds must not be an empty rect.
This class has been deprecated by Apple.

54.54.4 Methods

54.54.5 Constructor(dataProvider as CGDataProviderMBS)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new QTPictMBS object based on a data provider.
Notes:

Create a QDPict object, using dataProvider to obtain the QDPict's data.
It is assumed that either the first byte or the 513th byte of data in the file referenced by the URL is the first byte of the picture header. If the URL does not begin PICT data at one of these places in the data fork then the handle property will be 0.
See also:

- 54.54.6 Constructor(file as folderitem) 10647
- 54.54.7 Constructor(url as string) 10647

54.54.6 Constructor(file as folderitem)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new QTPictMBS object based on a file.
See also:

- 54.54.5 Constructor(dataProvider as CGDataProviderMBS) 10646
- 54.54.7 Constructor(url as string) 10647

54.54.7 Constructor(url as string)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new QTPictMBS object based on an url.
Notes:

Create a QDPict from an url.
It is assumed that either the first byte or the 513th byte of data in the file referenced by the URL is the first byte of the picture header. If the URL does not begin PICT data at one of these places in the data fork then the handle property will be 0.
See also:

- 54.54.5 Constructor(dataProvider as CGDataProviderMBS) 10646
- 54.54.6 Constructor(file as folderitem) 10647

54.54.8 DrawToCGContext(context as CGContextMBS, r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draws the picture into the given context.
Notes:

You can increase the drawing resolution by passing a bigger rectangle.
Lasterror is set. -1 if context or rectangle are invalid.

Draw picture in the rectangular area specified by r. The PICT bounds of the page is scaled, if necessary, to fit into the rectangle. To get unscaled results, supply a rect the size of the rect returned by GetBounds.

54.54.9 GetBounds as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the bounds of the picture.
Notes:

This are the bounds in pixel for 72 dpi.

Return the Picture Bounds of the QuickDraw picture represented by the picture. This rectangle is in the default user space with one unit = 1/72 inch.

54.54.10 GetResolution(byref xRes as single, byref yRes as single)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the resolution of the picture.
Notes:

Return the resolution of the QuickDraw picture represented by the picture.
This data, together with the CGRect returned by GetBounds, can be used to compute the size of the picture in pixels, which is what QuickDraw really records into pictures.

54.54.11 Height as Double

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The height of the picture.
Notes: This value is using 72 dpi.

54.54.12 HorizontalResolution as Double

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The horizontal resolution.

54.54.13 VerticalResolution as Double

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The vertical resolution.

54.54.14 Width as Double

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The width of the picture.
Notes: This value is using 72 dpi.

54.54.15 Properties

54.54.16 Handle as Integer

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

54.54.17 LastError as Integer

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Set by DrawToCGContext.
(Read and Write property)

54.55 class QuartzFilterManagerMBS

54.55.1 class QuartzFilterManagerMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to manage the quartz filters on the system.

54.55.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr9

54.55.3 Blog Entries

- MBS Real Studio Plugins, version 11.2pr9

54.55.4 Methods

54.55.5 filterPanel as NSPanelMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the panel where users can select a filter.
Example:

```
dim m as QuartzFiltermanagerMBS
dim p as NSPanelMBS

m=new QuartzFiltermanagerMBS
p=m.filterPanel
p.Show
```

Notes: Returns nil on any error.

54.55.6 filters as QuartzFilterMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array with all filters.
Example:

```
dim q as new QuartzFilterManagerMBS
dim a() as QuartzFilterMBS

a=q.filters

MsgBox str(ubound(a)+1)+" filters found."
```

54.55.7 filtersInDomains(domains() as string) as QuartzFilterMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array with all filters in the given domains.
Example:

```
dim domains() as string = array(QuartzFilterManagerMBS.kQuartzFilterPrintingDomain)
dim a() as QuartzFilterMBS = QuartzFilterManagerMBS.filtersInDomains(domains)

MsgBox str(ubound(a)+1)+" filters found."
```

54.55.8 filterView as QuartzFilterViewMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The view which you can use to select views.
Notes: You can use the panel as an extra window or add this view to one of your settings windows.

54.55.9 selectedFilter as QuartzFilterMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The currently selected filter.

54.55.10 selectFilter(filter as QuartzFilterMBS) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Selects a filter.
Notes: Returns true on success.

54.55.11 Properties

54.55.12 Handle as Integer

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal used handle to the filter manager.
Notes: (Read and Write property)

54.55.13 Events

54.55.14 didAddFilter(filter as QuartzFilterMBS)

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: The given filter was added to the filter list.

54.55.15 didModifyFilter(filter as QuartzFilterMBS)

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: The given filter was modified.

54.55.16 didRemoveFilter(filter as QuartzFilterMBS)

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: The given filter was removed.

54.55.17 didSelectFilter(filter as QuartzFilterMBS)

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: The selection changed to the new filter.

54.55.18 Constants

54.55.19 kQuartzFilterApplicationDomain="kQuartzFilterApplicationDomain"

MBS MacControls Plugin, Plugin Version: 11.2.

Function: One of the filter domain constants.
Example:

```
dim domains() as string = array(QuartzFilterManagerMBS.kQuartzFilterApplicationDomain)
dim a() as QuartzFilterMBS = QuartzFilterManagerMBS.filtersInDomains(domains)

MsgBox str(ubound(a)+1)+" filters found."
```

54.55.20 kQuartzFilterPDFWorkflowDomain="kQuartzFilterPDFWorkflowDomain"

MBS MacControls Plugin, Plugin Version: 11.2.

Function: One of the filter domain constants.
Example:

```
dim domains() as string = array(QuartzFilterManagerMBS.kQuartzFilterPDFWorkflowDomain)
dim a() as QuartzFilterMBS = QuartzFilterManagerMBS.filtersInDomains(domains)

MsgBox str(ubound(a)+1)+" filters found."
```

54.55.21 kQuartzFilterPrintingDomain="kQuartzFilterPrintingDomain"

MBS MacControls Plugin, Plugin Version: 11.2.

Function: One of the filter domain constants.
Example:

```
dim domains() as string = array(QuartzFilterManagerMBS.kQuartzFilterPrintingDomain)
dim a() as QuartzFilterMBS = QuartzFilterManagerMBS.filtersInDomains(domains)

MsgBox str(ubound(a)+1)+" filters found."
```

54.56 class QuartzFilterMBS

54.56.1 class QuartzFilterMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The Quartz filter class.
Example:

```
// Create a couple of PDF files to test different Quartz filters

// get some picture
dim pic as Picture = LogoMBS(500)
dim image as new NSImageMBS(pic)

// create page with picture
dim page as new PDFPageMBS(image)

// create new document
dim doc as new PDFDocumentMBS

// add page
doc.insertPage(page,0)

// get filters
dim manager as new QuartzFilterManagerMBS
dim filters() as QuartzFilterMBS = Manager.filters

for each filter as QuartzFilterMBS in filters

// save PDF with this filter
dim file as FolderItem = SpecialFolder.Desktop.Child(filter.localizedName+".pdf")

call doc.write(file, filter)

next
```

Notes:

This filters can be used to change PDFs on writing like to reduce the file size.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

54.56.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr7

54.56.3 Blog Entries

- MBS Real Studio Plugins, version 11.2pr7

54.56.4 Methods

54.56.5 applyToContext(CGContextHandle as Integer) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Applies a filter to a given context.
Example:

```
dim c as CGContextMBS // your context
dim fi as QuartzFilterMBS

fi=QuartzFilterMBS.quartzFilterWithFile(SpecialFolder.Desktop.Child("Reduce File Size.qfilter"))

call fi.applyToContext(c.Handle)
```

Notes: Returns true on success.

54.56.6 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

54.56.7 localizedName as string

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The localized name of the filter.
Example:

```
dim q as new QuartzFilterManagerMBS
dim s(-1) as string

dim a() as QuartzFilterMBS = q.filters

for each f as QuartzFilterMBS in a
s.append f.localizedName
next
```

MsgBox Join(s,EndOfLine)

54.56.8 quartzFilterWithFile(file as folderitem) as QuartzFilterMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Loads a quartz filter from the given folderitem.
Example:

```
dim c as CGContextMBS // your context
dim fi as QuartzFilterMBS
dim file as folderitem

file=SpecialFolder.Desktop.Child("Reduce File Size.qfilter")
fi=QuartzFilterMBS.quartzFilterWithFile(file)

call fi.applyToContext(c.Handle)
```

Notes:

Returns nil on any error.
Requires Mac OS X 10.5.

54.56.9 quartzFilterWithURL(url as string) as QuartzFilterMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Loads the quartz filter from the given URL.
Notes:

Returns nil on any error.
Requires Mac OS X 10.5.

54.56.10 removeFromContext(CGContextHandle as Integer)

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes a filter from a CGContext.
Notes: Pass CGContextMBS.handle and make sure it is not 0.

54.56.11 url as string

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The URL where this filter is located.
Example:

```
dim q as new QuartzFilterManagerMBS
dim s(-1) as string

dim a() as QuartzFilterMBS = q.filters

for each f as QuartzFilterMBS in a
s.append f.url
next

MsgBox Join(s,EndOfLine)
```

54.56.12 Properties

54.56.13 Handle as Integer

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle to the filter object.
Notes: (Read and Write property)

54.57 class QuartzFilterViewMBS

54.57.1 class QuartzFilterViewMBS

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The view to select quartz filters.
Notes:

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

54.57.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr5

54.57.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr5

54.57.4 Methods

54.57.5 Constructor

MBS MacControls Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new Quartz Filter View with size 100/100 and position 0/0
Example:

```
dim t as new QuartzFilterViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 54.57.6 Constructor(Handle as Integer) 10658
- 54.57.7 Constructor(left as Double, top as Double, width as Double, height as Double) 10659

54.57.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given QuartzFilterViewMBS handle.
Example:

```
dim t as new QuartzFilterViewMBS(0, 0, 100, 100)
dim v as new QuartzFilterViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a QuartzFilterView and the plugin retains this handle.
See also:

- 54.57.5 Constructor 10658
- 54.57.7 Constructor(left as Double, top as Double, width as Double, height as Double) 10659

54.57.7 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new Quartz Filter View with the given size and position.
Example:

```
dim x as new QuartzFilterViewMBS(0, 0, 100, 100)
```

Notes:

On success the handle property is not zero.
The new movie view object must be inserted into the view hierarchy of an NSWindow before it can be used.
This method is the designated initializer for the QuartzFilterView class.
See also:

- 54.57.5 Constructor 10658
- 54.57.6 Constructor(Handle as Integer) 10658

54.57.8 sizeToFit

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Resizes the view to the best size.

Chapter 55

CoreGraphics Events

55.1 class CGEventMBS

55.1.1 class CGEventMBS

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The class for a CoreGraphics event.
Notes: Subclass of the CFObjectMBS class.

55.1.2 Blog Entries

- MBS Xojo Plugins, version 17.4pr5

55.1.3 Blog Entries

- MBS Xojo Plugins, version 17.4pr5

55.1.4 Methods

55.1.5 available as boolean

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on macOS 10.4 or newer.

55.1.6 Constructor(Handle as Integer)

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor taking a CGEventRef value.
Notes: The object is retained and should not be zero.

55.1.7 Copy as CGEventMBS

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Return a copy of event.

55.1.8 Properties

55.1.9 EventSource as CGEventSourceMBS

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop only.

Function: The event source.
Notes: (Read and Write property)

55.1.10 Flags as Integer

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop only.

Function: The event flags of an event.
Notes: (Read and Write property)

55.1.11 Timestamp as UInt64

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop only.

Function: The timestamp of an event.
Notes: (Read and Write property)

55.1.12 Type as Integer

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop only.

Function: The event type of an event (left mouse down, for example).
Notes:

See constants like kCGMouseButtonLeft.
(Read and Write property)

55.1.13 UnicodeString as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop only.

Function: The Unicode string associated with a keyboard event.
Notes:

By default, the system translates the virtual key code in a keyboard event into a Unicode string based on the keyboard ID in the event source. This function allows you to manually override this string. Note that application frameworks may ignore the Unicode string in a keyboard event and do their own translation based on the virtual keycode and perceived event state.
(Read and Write property)

55.1.14 UnicodeStringLength as Integer

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop only.

Function: Return the length of the unicode string associated with a keyboard event.
Notes: (Read only property)

55.1.15 DoubleValueField(field as Integer) as Double

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The floating-point value of a field in an event.
Notes:

Before setting a value, the event type must be set using a typed event creation function such as CGEventCreateMouseEvent, or by setting type property.

If you are creating a mouse event generated by a tablet, call this function and specify the field kCGMouseEventSubtype with a value of kCGEventMouseSubtypeTabletPoint or kCGEventMouseSubtypeTabletProximity before setting other parameters.
(Read and Write computed property)

55.1.16 IntegerValueField(field as Integer) as Int64

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The integer value of a field in an event.
Notes:

Before calling this function, the event type must be set using a typed event creation function such as CGEventCreateMouseEvent, or by setting type property.

In cases where the field value is represented within the event by a fixed point number or an integer, the result is scaled to the appropriate range as part of creating the floating-point representation.
(Read and Write computed property)

55.1.17 Constants

55.1.18 kCGEventFlagsChanged = 12

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: Key flags changed, e.g. modifier keys pressed.

55.1.19 kCGEventKeyDown = 10

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: Key Down

55.1.20 kCGEventKeyUp = 11

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: Key up.

55.1.21 kCGEventLeftMouseDown = 1

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: left mouse-down event

55.1.22 kCGEventLeftMouseDragged = 6

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: left mouse-dragged event

55.1.23 kCGEventLeftMouseUp = 2

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: left mouse-up event

55.1.24 kCGEventMouseMoved = 5

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: mouse-moved event

55.1.25 kCGEventNull = 0

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: The null event. (not defined)

55.1.26 kCGEventOtherMouseDown = 25

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: other mouse-down event

55.1.27 kCGEventOtherMouseDragged = 27

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: other mouse-dragged event

55.1.28 kCGEventOtherMouseUp = 26

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: other mouse-up event

55.1.29 kCGEventRightMouseDown = 3

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: right mouse-down event

55.1.30 kCGEventRightMouseDragged = 7

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: right mouse-dragged event

55.1.31 kCGEventRightMouseUp = 4

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: right mouse-up event

55.1.32 kCGEventScrollWheel = 22

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: Scroll Wheel event.

55.1.33 kCGEventTabletPointer = 23

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: Tablet pointer event.

55.1.34 kCGEventTabletProximity = 24

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: Tablet Proximity event.

55.1.35 kCGEventTapDisabledByTimeout = & hFFFFFFFE

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: Out of band event types. These are delivered to the event tap callback to notify it of unusual conditions that disable the event tap.

55.1.36 kCGEventTapDisabledByUserInput = & hFFFFFFFF

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event type constants.
Notes: Out of band event types. These are delivered to the event tap callback to notify it of unusual conditions that disable the event tap.

55.1.37 kCGMouseButtonCenter = 2

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the mouse button constants.
Notes: Center

55.1.38 kCGMouseButtonLeft = 0

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the mouse button constants.
Notes: Left

55.1.39 kCGMouseButtonRight = 1

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the mouse button constants.
Notes: Right

55.1.40 kCGScrollEventUnitLine = 1

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the constants that specify the unit of measurement for a scrolling event.
Notes: Line

55.1.41 kCGScrollEventUnitPixel = 0

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the constants that specify the unit of measurement for a scrolling event.
Notes: Pixel

55.2 class CGEventSourceMBS

55.2.1 class CGEventSourceMBS

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The class for CGEventSource class.
Notes: Subclass of the CFObjectMBS class.

55.2.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr8

55.2.3 Blog Entries

- MBS Xojo Plugins, version 18.5pr8

55.2.4 Methods

55.2.5 Constructor(Handle as Integer)

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor taking a CGEventSourceRef value.
Notes: The object is retained and should not be zero.

55.2.6 Properties

55.2.7 KeyboardType as Integer

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop only.

Function: The keyboard type.
Notes:

e.g. 198 for Touchbar or 59 for Macbook Pro keyboard.
(Read only property)

55.2.8 UserData as Int64

MBS MacCF Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop only.

Function: Custom user data to associate with event source.
Notes: (Read and Write property)

55.3 class CGEventTapMBS

55.3.1 class CGEventTapMBS

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The class for a Event taps.
Notes:

Taps may be placed at the point where HIDSystem events enter the server, at the point where HIDSystem and remote control events enter a session, at the point where events have been annotated to flow to a specific application, or at the point where events are delivered to the application. Taps may be inserted at a specified point at the head of pre-existing filters, or appended after any pre-existing filters.

Taps may be passive event listeners, or active filters. An active filter may pass an event through unmodified, modify an event, or discard an event. When a tap is registered, it identifies the set of events to be observed with a mask, and indicates if it is a passive or active event filter. Multiple event type bitmasks may be ORed together.
Taps may only be placed at kCGHIDEventTap by a process running as the root user. An exception is raised for other users.

Taps placed at kCGHIDEventTap, kCGSessionEventTap, kCGAnnotatedSessionEventTap, or on a specific process may only receive key up and down events if access for assistive devices is enabled (Preferences Accessibility panel, Keyboard view) or the caller is enabled for assistive device access, as by AXMakeProcessTrusted. If the tap is not permitted to monitor these events when the tap is created, then the appropriate bits in the mask are cleared. If that results in an empty mask, then an exception is raised.

For MacOS 10.15 using CGEventTap to track other applications may result in a dialog asking for permissions. This may not happen if you track your own process' events.

55.3.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr3
- MBS Xojo Plugins, version 17.4pr5

55.3.3 Blog Entries

- MBS Xojo Plugins, version 19.4pr3
- MBS Xojo Plugins, version 17.4pr5

55.3.4 Methods

55.3.5 available as boolean

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true for macOS 10.4 or newer.

55.3.6 Constructor(tapLocation as Integer, Place as Integer, Options as Integer, EventMask as Integer, PID as Integer = -1)

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates an event tap.
Notes:

If you pass PID >0, we will create an event tap for a specified process. tapLocation is then ignored.
PID parameter added for plugin version 19.4.

55.3.7 Properties

55.3.8 Enabled as Boolean

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop only.

Function: Whether this tap is enabled.
Notes: (Read and Write property)

55.3.9 Events

55.3.10 GotEvent(Proxy as Ptr, type as Integer, e as CGEventMBS) as CGEventMBS

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: .

Function: The event called when you can process an event.
Notes: For an active tap, please return the event back.

55.3.11 Constants

55.3.12 kCGAnnotatedSessionEventTap = 2

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the constants that specify possible tapping points for events.
Notes: At the point where events have been annotated to flow to a specific application, or at the point where events are delivered to the application.

55.3.13 kCGEventMaskFlagsChanged = 4096

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: Key flags changed, e.g. modifier keys pressed.

55.3.14 kCGEventMaskForAllEvents = -1

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: Listen for all events.

55.3.15 kCGEventMaskKeyDown = 1024

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: Key Down

55.3.16 kCGEventMaskKeyUp = 2048

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: Key up.

55.3.17 kCGEventMaskLeftMouseDown = 2

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: left mouse-down event

55.3.18 kCGEventMaskLeftMouseDragged = 64

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: left mouse-dragged event

55.3.19 kCGEventMaskLeftMouseUp = 4

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: left mouse-up event

55.3.20 kCGEventMaskMouseMoved = 32

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: mouse-moved event

55.3.21 kCGEventMaskOtherMouseDown = & h2000000

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: other mouse-down event

55.3.22 kCGEventMaskOtherMouseDragged = & h8000000

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: other mouse-dragged event

55.3.23 kCGEventMaskOtherMouseUp = & h4000000

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: other mouse-up event

55.3.24 kCGEventMaskRightMouseDown = 8

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: right mouse-down event

55.3.25 kCGEventMaskRightMouseDragged = 128

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: right mouse-dragged event

55.3.26 kCGEventMaskRightMouseUp = 16

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: right mouse-up event

55.3.27 kCGEventMaskScrollWheel = & h400000

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: Scroll Wheel event.

55.3.28 kCGEventMaskTabletPointer = & h800000

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: Tablet pointer event.

55.3.29 kCGEventMaskTabletProximity = & h1000000

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the event mask constants.
Notes: Tablet Proximity event.

55.3.30 kCGEventTapOptionDefault = 0

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the constants that specify whether a new event tap is an active filter or a passive listener.
Notes: Default, active filter.

55.3.31 kCGEventTapOptionListenOnly = 1

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the constants that specify whether a new event tap is an active filter or a passive listener.
Notes: Listen only.

55.3.32 kCGHeadInsertEventTap = 0

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the constants that specify where a new event tap is inserted into the list of active event taps.
Notes: Insert in front.

55.3.33 kCGHIDEventTap = 0

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the constants that specify possible tapping points for events.
Notes: When HIDSystem events enter the server.

55.3.34 kCGSessionEventTap = 1

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the constants that specify possible tapping points for events.
Notes: At the point where HIDSystem and remote control events enter a session.

55.3.35 kCGTailAppendEventTap = 1

MBS MacCF Plugin, Plugin Version: 17.4.

Function: One of the constants that specify where a new event tap is inserted into the list of active event taps.
Notes: Append to the tail.

Chapter 56

CoreImage

56.1 class CIAttributeMBS

56.1.1 class CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: A class for attributes of CoreImage Filters.

56.1.2 Properties

56.1.3 ClassName as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Class name of the filter.
Notes: (Read only property)

56.1.4 DefaultAffineTransform as NSAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The default value for this color.
Notes:

Only valid for affine transformations.
(Read only property)

56.1.5 DefaultColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The default value for this color.
Notes:

Only valid for colors.
(Read only property)

56.1.6 DefaultNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The default value for this color.
Notes:

Only valid for numbers.
(Read only property)

56.1.7 DefaultValue as Variant

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The default value.
Notes: (Read only property)

56.1.8 DefaultVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The default value for this color.
Notes:

Only valid for vectors.
(Read only property)

56.1.9 description as string

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The description of this attribute.
Notes: (Read only property)

56.1.10 DisplayName as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The localized display name for the attribute.
Notes:

Not all attributes do have a localized name and not all do have a name at all.
(e.g. outputImage normally has no display name)
(Read only property)

56.1.11 HasMaxNumber as Boolean

MBS MacCI Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Whether this attribute has a defined maximum value.
Notes: (Read only property)

56.1.12 HasMinNumber as Boolean

MBS MacCI Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Whether this attribute has a defined minimum value.
Notes: (Read only property)

56.1.13 HasSliderMaxNumber as Boolean

MBS MacCI Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Whether this attribute has a defined slider maximum value.
Notes: (Read only property)

56.1.14 HasSliderMinNumber as Boolean

MBS MacCI Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Whether this attribute has a defined slider minimum value.
Notes: (Read only property)

56.1.15 IdentityAffineTransform as NSAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The value to be used to keep the filter doing nothing.
Notes:

Only valid for affine transformations.
(Read only property)

56.1.16 IdentityNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The value to be used to keep the filter doing nothing.
Notes:

Only valid for numbers.
(Read only property)

56.1.17 IdentityValue as Variant

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The identity value.
Notes: (Read only property)

56.1.18 IdentityVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The value to be used to keep the filter doing nothing.
Notes:

Only valid for vectors.
(Read only property)

56.1.19 LocalizedDescription as string

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Description of the filter intended for UI display (eg. localized)
Notes: (Read only property)

56.1.20 MaxNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Maximum value for the attribute.
Notes:

Only valid for numbers.
If no value is defined, this property is zero and HasMaxNumber returns false.
(Read only property)

56.1.21 MinNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Minimum value for the attribute.
Notes:

Only valid for numbers.
If no value is defined, this property is zero and HasMinNumber returns false.
(Read only property)

56.1.22 Name as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The name of this attribute.
Notes: (Read only property)

56.1.23 SliderMaxNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Maximum value for the slider.
Example:

```
dim f as CIFilterEdgesMBS
dim a as CIAttributeMBS

f=new CIFilterEdgesMBS
f.inputImage=NewCIImagewithFileMBS(SpecialFolder.Desktop.Child("Paris.jpg"))
```

```
a=f.AttributeinputIntensity
Title=str(a.SliderMinNumber)+" "+str(a.SliderMaxNumber)
f.inputIntensity=a.SliderMaxNumber

Backdrop=f.outputImage.RenderPicture
```

Notes:

Only valid for numbers.
If no value is defined, this property is zero and HasSliderMaxNumber returns false.
(Read only property)

56.1.24 SliderMinNumber as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Minimum value for the slider.
Notes:

Only valid for numbers.
If no value is defined, this property is zero and HasSliderMinNumber returns false.
(Read only property)

56.1.25 Type as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The type of this attribute.
Notes:

Types for numbers:
kCIAttributeTypeDistance
kCIAttributeTypeBoolean
kCIAttributeTypeTime
kCIAttributeTypeAngle
kCIAttributeTypeScalar

Types for vectors:
kCIAttributeTypePosition (2 Dimensions)
kCIAttributeTypeOffset (2 Dimensions)
kCIAttributeTypePosition3 (3 Dimensions)
kCIAttributeTypeRectangle (4 Dimensions)

Types for colors:
kCIAttributeTypeOpaqueColor

Types for images:
kCIAttributeTypeGradient
(Read only property)

56.1.26 Values as Dictionary

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Queries all values as dictionary.
Notes: (Read only property)

56.2 class CIAztecCodeDescriptorMBS

56.2.1 class CIAztecCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: CIAztecCodeDescriptor is a concrete subclass of CIBarcodeDescriptor that defines an abstract representation of an Aztec Code symbol.
Notes:

CIAztecCodeDescriptor may not be instantiated directly.
Subclass of the CIBarcodeDescriptorMBS class.

56.2.2 Methods

56.2.3 Constructor(errorCorrectedPayload as MemoryBlock, isCompact as Boolean, layerCount as Integer, dataCodewordCount as Integer)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Initializes a descriptor that can be used as input to CIBarcodeGenerator.

56.2.4 descriptorWithPayload(errorCorrectedPayload as MemoryBlock, isCompact as Boolean, layerCount as Integer, dataCodewordCount as Integer) as CIAztecCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a descriptor that can be used as input to CIBarcodeGenerator.

56.2.5 Properties

56.2.6 dataCodewordCount as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The number of non-error-correction codewords carried by the Aztec code symbol.
Notes:

Used to determine the level of error correction in conjunction with the number of data layers. Valid values are 1...2048. Compact symbols can have up to 64 message codewords.

Note that this value can exceed the number of message codewords allowed by the number of data layers in this symbol. In this case, the actual number of message codewords is 1024 fewer than this value and the message payload is to be interpreted in an application-defined manner.
(Read only property)

56.2.7 errorCorrectedPayload as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The error-corrected codewords that comprise the Aztec code symbol.
Notes:

Aztec Codes are formally specified in ISO/IEC 24778:2008(E).

The error corrected payload consists of the 6-, 8-, 10-, or 12-bit message codewords produced at the end of the step described in section 7.3.1.2 "Formation of data codewords", which exists immediately prior to adding error correction. These codewords have dummy bits inserted to ensure that an entire codeword isn't all 0's or all 1's. Clients will need to remove these extra bits as part of interpreting the payload.
(Read only property)

56.2.8 isCompact as Boolean

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: A boolean indicating whether the symbol is compact.
Notes:

Compact Aztec symbols use one-fewer ring in the central finder pattern than full-range Aztec symbols of the same number of data layers.
(Read only property)

56.2.9 layerCount as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The number of data layers in the Aztec code symbol.
Notes:

Combined with the isCompact property, the number of data layers determines the number of modules in the Aztec Code symbol. Valid values range from 1 to 32. Compact symbols can have up to 4 data layers.

The number of data layers also determines the number of bits in each data codeword of the message carried by the Aztec Code symbol.

(Read only property)

56.3 class CIBarcodeDescriptorMBS

56.3.1 class CIBarcodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: CIBarcodeDescriptor is an abstract base class that defines an abstract representation of a machine readable code's symbol attributes.
Notes:

Each subclass is sufficient to recreate the symbol exactly as seen or to be used with a custom parser. Subclasses of CIBarcodeDescriptor are defined for each code type to contain the formal specification of each symbology.
Available on macOS 10.13.

56.3.2 Methods

56.3.3 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor with passing in a handle to an existing object.
Notes: Handle must be of type CIBarcodeDescriptor and will be retained.

56.3.4 copy as CIBarcodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates a copy of this barcode description.

56.3.5 Properties

56.3.6 description as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The description string to debug.
Notes: (Read only property)

56.3.7 Handle as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

56.4 class CIColorMBS

56.4.1 class CIColorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: A class for a color in CoreImage.

56.4.2 Blog Entries

- Tip of day: Gradients with CoreImage Filter
- MBS Real Studio Plugins, version 13.1pr13
- MBS Real Studio Plugins, version 12.1pr5

56.4.3 Blog Entries

- Tip of day: Gradients with CoreImage Filter
- MBS Real Studio Plugins, version 13.1pr13
- MBS Real Studio Plugins, version 12.1pr5

56.4.4 Methods

56.4.5 blackColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock black color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

56.4.6 blueColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock blue color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

56.4.7 clearColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock clear color with sRGB color space.
Notes:

Transparent color.
Available in macOS 10.12 or newer.

56.4.8 colorWithCGColor(ColorValue as CGColorMBS) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a new color based on a CoreGraphics color.

56.4.9 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a color object using the specified RGB color component values
Notes:

r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.

Initializes Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB.
See also:

- 56.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS 10692
- 56.4.11 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 10693
- 56.4.12 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 10693

56.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a color object using the specified RGBA color component values.
Notes:

r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.
a: The value of the alpha component.

Initializes a Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB and an alpha value.
See also:

- 56.4.9 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS 10692
- 56.4.11 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 10693
- 56.4.12 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 10693

56.4.11 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create a new color object in a given colorspace.
Notes:

Will return nil if the colorspace is not kCGColorSpaceModelRGB.
Available in macOS 10.12 or newer.
See also:

- 56.4.9 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS 10692
- 56.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS 10692
- 56.4.12 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 10693

56.4.12 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create a new color object in a given colorspace.
Notes:

Will return nil if the colorspace is not kCGColorSpaceModelRGB.
Available in macOS 10.12 or newer.
See also:

- 56.4.9 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS 10692
- 56.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS 10692
- 56.4.11 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS 10693

56.4.13 colorWithString(representation as String) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a color from a color string representation.

56.4.14 Component(index as UInt32) as Double

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The color component with the given index.
Notes: Index is from 0 to NumberOfComponents - 1.

56.4.15 Constructor(ColorValue as CGColorMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new CIColor based on the given CoreGraphics color.
Notes: On success, the handle is not zero.
See also:

- 56.4.16 Constructor(Handle as Integer) 10695
- 56.4.17 Constructor(Red as Double, Green as Double, Blue as Double) 10695
- 56.4.18 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double) 10696
- 56.4.19 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS) 10696
- 56.4.20 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 10697

56.4.16 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Initializes object with given object reference.
Notes:

ref should be a CIColor* and the object is retained.
Raises UnsupportedOperationException if object is not a CIColor.
See also:

- 56.4.15 Constructor(ColorValue as CGColorMBS) 10694
- 56.4.17 Constructor(Red as Double, Green as Double, Blue as Double) 10695
- 56.4.18 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double) 10696
- 56.4.19 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS) 10696
- 56.4.20 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 10697

56.4.17 Constructor(Red as Double, Green as Double, Blue as Double)

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a color object using the specified RGB color component values
Notes:

r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.

Initializes Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB.
See also:

- 56.4.15 Constructor(ColorValue as CGColorMBS) 10694
- 56.4.16 Constructor(Handle as Integer) 10695
- 56.4.18 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double) 10696
- 56.4.19 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS) 10696
- 56.4.20 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 10697

56.4.18 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double)

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a color object using the specified RGBA color component values.
Notes:

r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.
a: The value of the alpha component.

Initializes a Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB and an alpha value.
See also:

- 56.4.15 Constructor(ColorValue as CGColorMBS) 10694

- 56.4.17 Constructor(Red as Double, Green as Double, Blue as Double) 10695
- 56.4.19 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS) 10696
- 56.4.20 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 10697

56.4.19 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create a new color object in a given colorspace.
Notes:

Will fail if the colorspace is not kCGColorSpaceModelRGB.
Available in macOS 10.12 or newer.
See also:

- 56.4.15 Constructor(ColorValue as CGColorMBS) 10694
- 56.4.16 Constructor(Handle as Integer) 10695

- 56.4.20 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 10697

56.4.20 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create a new color object in a given colorspace.
Notes:

Will fail if the colorspace is not kCGColorSpaceModelRGB.
Available in macOS 10.12 or newer.
See also:

- 56.4.15 Constructor(ColorValue as CGColorMBS) 10694
- 56.4.16 Constructor(Handle as Integer) 10695

- 56.4.18 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double) 10696
- 56.4.19 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS) 10696

56.4.21 copy as CIColorMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a copy of the color object.

56.4.22 cyanColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock cyan color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

56.4.23 grayColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock gray color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

56.4.24 greenColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock green color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

56.4.25 magentaColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock magenta color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

56.4.26 redColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock red color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

56.4.27 whiteColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock white color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

56.4.28 yellowColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns stock yellow color with sRGB color space.
Notes: Available in macOS 10.12 or newer.

56.4.29 Properties

56.4.30 Alpha as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The alpha value of the color.
Notes:

Values range between 0.0 to 1.0.
(Read only property)

56.4.31 Blue as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The (unpremultiplied) blue component of the color.
Notes:

Values range between 0.0 to 1.0.
(Read only property)

56.4.32 ColorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The color space object associated with the color.
Notes:

nil on any error.
(Read only property)

56.4.33 description as String

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the textual description for this color.
Notes: (Read only property)

56.4.34 Green as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The (unpremultiplied) green component of the color.
Notes:

Values range between 0.0 to 1.0.
(Read only property)

56.4.35 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The handle to the CIColor object used internally.
Notes: (Read only property)

56.4.36 NumberOfComponents as Integer

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The number of color components (including alpha).
Notes: (Read only property)

56.4.37 Red as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The (unpremultiplied) red component of the color.
Notes:

Values range between 0.0 to 1.0.
(Read only property)

56.4.38 StringRepresentation as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns a formatted string with the components of the color.
Example:

```
dim c as CIColorMBS

c=NewCIColorMBS(1,0,0)

MsgBox c.stringRepresentation // shows "1 0 0 1"
```

Notes:

Returns "" on any error.
(Read only property)

56.5 class CIContextMBS

56.5.1 class CIContextMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: A class for a drawing context for CoreImage.

56.5.4 Methods

56.5.5 ClearCaches

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Frees any cached data (such as temporary images) associated with the context.
Notes: This also runs the garbage collector.

56.5.6 Constructor

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Creates a new CIContext without a specific target.
Notes: Great to create a context and render something inside.
See also:

- 56.5.7 Constructor(cgcontext as CGContextMBS) 10703
- 56.5.8 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) 10703
- 56.5.9 Constructor(Handle as Integer) 10704
- 56.5.10 Constructor(Pic as Picture) 10704

56.5.7 Constructor(cgcontext as CGContextMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a new CoreImage context object, all output will be drawn into the CG context.
Notes: On success, the handle is not zero.
See also:

- 56.5.6 Constructor 10703
- 56.5.8 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) 10703
- 56.5.9 Constructor(Handle as Integer) 10704
- 56.5.10 Constructor(Pic as Picture) 10704

56.5.8 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a new CoreImage context object with options, all output will be drawn into the CG context.
Notes:

OutputColorSpace: A CGColorSpaceMBS object defining the color space in which all intermediate operations are performed.
WorkingColorSpace: A CGColorSpaceRef object defining the color space that images are converted to before rendering into the context.

UseSoftwareRenderer: Whether you want software renderer only.

On success, the handle is not zero.
See also:

- 56.5.6 Constructor 10703
- 56.5.7 Constructor(cgcontext as CGContextMBS) 10703
- 56.5.9 Constructor(Handle as Integer) 10704
- 56.5.10 Constructor(Pic as Picture) 10704

56.5.9 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Initializes object with given object reference.
Notes:

ref should be a CIContext* and the object is retained.
Raises UnsupportedOperationException if object is not a CIContext.
See also:

- 56.5.6 Constructor 10703
- 56.5.7 Constructor(cgcontext as CGContextMBS) 10703
- 56.5.8 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) 10703
- 56.5.10 Constructor(Pic as Picture) 10704

56.5.10 Constructor(Pic as Picture)

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a context targeting the picture.
Notes: Works only on Cocoa target.
See also:

- 56.5.6 Constructor 10703
- 56.5.7 Constructor(cgcontext as CGContextMBS) 10703
- 56.5.8 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) 10703
- 56.5.9 Constructor(Handle as Integer) 10704

56.5.11 CreateCGImage(image as CIImageMBS, r as CGRectMBS = nil) as CGImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new image with the content of the CIImage.
Notes:

Render the region 'r' of image 'im' into a temporary buffer using the context, then create and return a new CoreGraphics image with the results.
If r is nil, the whole image extent is used.
See also:

- 56.5.12 CreateCGImage(image as CIImageMBS, r as CGRectMBS, ColorSpace as CGColorSpaceMBS) as CGImageMBS 10705

56.5.12 CreateCGImage(image as CIImageMBS, r as CGRectMBS, ColorSpace as CGColorSpaceMBS) as CGImageMBS

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a new image with the content of the CIImage.
Notes:

Render the region 'r' of image 'im' into a temporary buffer using the context, then create and return a new CoreGraphics image with the results.
If r is nil, the whole image extent is used.
See also:

- 56.5.11 CreateCGImage(image as CIImageMBS, r as CGRectMBS = nil) as CGImageMBS 10705

56.5.13 createCGLayer(size as CGSizeMBS, info as dictionary = nil) as CGLayerMBS

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a CGLayer object from the provided parameters.
Notes:

size: The size, in default user space units, of the layer relative to the graphics context.
ifno: A dictionary, which is passed to CGLayerCreateWithContext as the auxiliaryInfo parameter. Pass nil because this parameter is reserved for future use.

Returns a CGLayer object.

After calling this method, Core Image draws content into the CGLayer object. Core Image creates a CGLayer

object by calling the Quartz 2D function CGLayerCreateWithContext, whose prototype is:

```
CGLayerRef CGLayerCreateWithContext (
CGContextRef context,
CGSize size,
CFDictionaryRef auxiliaryInfo
);
```

Core Image passes the CIContext object as the context parameter, the size as the size parameter, and the dictionary as the auxiliaryInfo parameter. For more information on CGLayer objects, see Quartz 2D Programming Guide and CGLayer Reference.

Available in OS X v10.4 and later.

56.5.14 Destructor

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The destructor.

56.5.15 DrawImage(ciImage as CIImageMBS)

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Render the ciImage to the the context's destination.
Notes: Rendering the image will cause the calculations to be done so this call is quite expensive.

56.5.16 DrawImagePoint(ciImage as CIImageMBS, DestPoint as CGPointMBS, SourceRect as CGRectMBS = nil)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Render the subregion 'SourceRect' of 'ciImage' to point 'DestPoint' in the context's destination.
Deprecated: This item is deprecated and should no longer be used. You can use DrawImageRect instead.
Notes:

Rendering the image will cause the calculations to be done so this call is quite expensive.
If SourceRect is nil, we use the extent from image.

56.5.17 DrawImageRect(ciImage as CIImageMBS, DestRect as CGRectMBS, SourceRect as CGRectMBS = nil)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Render the rectangle 'SourceRect' of 'ciImage' to the rectangle 'DestRect' in the context's destination.
Notes:

Rendering the image will cause the calculations to be done so this call is quite expensive.
If SourceRect is nil, we use the extent from image.

56.5.18 Flush

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Flushes drawings to CGContext and target picture (if any).

56.5.19 HEIFRepresentationOfImage(Image as CIImageMBS, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

MBS MacCI Plugin, Plugin Version: 19.2, Platform: macOS, Targets: All.

Function: Render a CIImage to HEIF data.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Dim i As New CIImageMBS(f)
Dim c As New CIContextMBS

Dim heifData As MemoryBlock = c.HEIFRepresentationOfImage(i)

Break // see debugger
```

Notes:

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.13 or later.

56.5.20 JPEGRepresentationOfImage(Image as CIImageMBS, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to JPEG data.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim i as new CIImageMBS(f)
dim c as new CIContextMBS

dim jpegData as MemoryBlock = c.JPEGRepresentationOfImage(i)

Break // see debugger
```

Notes:

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome.
Supported options keys are kCGImageDestinationLossyCompressionQuality, kCIImageRepresentationAVDepthData, kCIImageRepresentationDepthImage, kCIImageRepresentationDisparityImage.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

56.5.21 kCIContextCacheIntermediates as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys that may be passed in the dictionary while creating contexts.
Notes:

A boolean NSNumber controlling how intermediate buffers are cached.
If false, the context will empty intermediates during and after renders.
The default value is true.

56.5.22 kCIContextHighQualityDownsample as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the option keys.
Notes:

A boolean controlling the quality of affine downsample operations.
True imply that more quality is desired.

On iOS the the default value is false.
On OSX the the default value is true.

56.5.23 kCIContextOutputColorSpace as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: A key for the color space to use for images before they are rendered to the context.
Notes:

By default, Core Image uses the GenericRGB color space, which leaves color matching to the system. You can specify a different output color space by providing a Quartz 2D CGColorSpace object (CGColorSpaceRef). (See Quartz 2D Programming Guide for information on creating and using CGColorSpace objects.)

To request that Core Image perform no color management, specify the NSNull object as the value for this key. Use this option for images that don't contain color data (such as elevation maps, normal vector maps, and sampled function tables).

Available in OS X v10.6 and later.

56.5.24 kCIContextOutputPremultiplied as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys that may be passed in the dictionary while creating contexts.
Notes:

A boolean controlling whether output renders produce alpha-premultiplied pixels.
The default value is true.

56.5.25 kCIContextPriorityRequestLow as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys that may be passed in the dictionary while creating contexts.
Notes: An number with a boolean value. When @YES the context will use low priority rendering on the GPU.

56.5.26 kCIContextUseSoftwareRenderer as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: A key for enabling software renderer use. If the associated NSNumber object is true, then the software renderer is required.
Notes: Available in OS X v10.6 and later.

56.5.27 kCIContextWorkingColorSpace as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: A key for the color space to use for image operations.
Notes:

By default, Core Image assumes that processing nodes are 128 bits-per-pixel, linear light, premultiplied RGBA floating-point values that use the GenericRGB color space. You can specify a different working color space by providing a Quartz 2D CGColorSpace object (CGColorSpaceRef). Note that the working color space must be RGB-based. If you have YUV data as input (or other data that is not RGB-based), you can use ColorSync functions to convert to the working color space. (See Quartz 2D Programming Guide for information on creating and using CGColorSpace objects.)

To request that Core Image perform no color management, specify the NSNull object as the value for this key. Use this option for images that don't contain color data (such as elevation maps, normal vector maps, and sampled function tables).

Available in OS X v10.6 and later.

56.5.28 kCIContextWorkingFormat as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: An option for the color format to use for intermediate results when rendering with the context.
Notes:

The value for this key is an NSNumber object containing a CIFormat value. The default working format is kCIFormatRGBA8 for CPU rendering and kCIFormatRGBAf for GPU rendering. GPU rendering also supports the kCIFormatRGBAh format for greater color precision, but this format requires twice as much memory and can be used only with color management enabled.

Available in OS X v10.4 and later.

56.5.29 kCIImageRepresentationAVDepthData as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the representation name.
Notes: For the raw depth data.

56.5.30 kCIImageRepresentationDepthImage as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the representation name.
Notes: For the depth image.

56.5.31 kCIImageRepresentationDisparityImage as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the representation name.
Notes: For the disparity image.

56.5.32 PNGRepresentationOfImage(Image as CIImageMBS, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to PNG data.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim i as new CIImageMBS(f)
dim c as new CIContextMBS

dim pngData as MemoryBlock = c.PNGRepresentationOfImage(i)

Break // see debugger
```

Notes:

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.

Available on macOS 10.13 or later.

56.5.33 ReclaimResources

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Frees temporary memory.
Notes: Runs the context's garbage collector to reclaim any resources that are no longer required (e.g. removes textures from the texture cache that reference deleted images.) This method is called automatically after every rendering operation.

56.5.34 TIFFRepresentationOfImage(Image as CIImageMBS, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to TIFF data.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim i as new CIImageMBS(f)
dim c as new CIContextMBS

dim tiffData as MemoryBlock = c.TIFFRepresentationOfImage(i)

Break // see debugger
```

Notes:

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

56.5.35 writeHEIFRepresentationOfImage(Image as CIImageMBS, file as FolderItem, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

MBS MacCI Plugin, Plugin Version: 19.2, Platform: macOS, Targets: All.

Function: Render a CIImage to HEIF file.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Dim i As New CIImageMBS(f)
Dim c As New CIContextMBS
Dim d As FolderItem = SpecialFolder.Desktop.Child("output.heif")

Dim e As NSErrorMBS
Dim b As Boolean = c.writePNGRepresentationOfImage(i, d, e)
If b Then
MsgBox "OK"
Else
MsgBox "Failed"+EndOfLine+e.LocalizedDescription
End If
```

Notes:

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.13 or later.

56.5.36 writeJPEGRepresentationOfImage(Image as CIImageMBS, file as FolderItem, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to JPEG file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim i as new CIImageMBS(f)
dim c as new CIContextMBS
dim d as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
```

```
dim e as NSErrorMBS
dim b as Boolean = c.writeJPEGRepresentationOfImage(i, d, e)
if b then
MsgBox "OK"
else
MsgBox "Failed"+EndOfLine+e.LocalizedDescription
end if
```

Notes:

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome.
Supported options keys are kCGImageDestinationLossyCompressionQuality, kCIImageRepresentationAVDepthData, kCIImageRepresentationDepthImage, kCIImageRepresentationDisparityImage.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

56.5.37 writePNGRepresentationOfImage(Image as CIImageMBS, file as FolderItem, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to PNG file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim i as new CIImageMBS(f)
dim c as new CIContextMBS
dim d as FolderItem = SpecialFolder.Desktop.Child("output.png")

dim e as NSErrorMBS
dim b as Boolean = c.writePNGRepresentationOfImage(i, d, e)
if b then
MsgBox "OK"
else
MsgBox "Failed"+EndOfLine+e.LocalizedDescription
end if
```

Notes:

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.

No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.13 or later.

56.5.38 writeTIFFRepresentationOfImage(Image as CIImageMBS, file as FolderItem, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

MBS MacCI Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Render a CIImage to TIFF file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim i as new CIImageMBS(f)
dim c as new CIContextMBS
dim d as FolderItem = SpecialFolder.Desktop.Child("output.tif")

dim e as NSErrorMBS
dim b as Boolean = c.writeTIFFRepresentationOfImage(i, d, e)
if b then
MsgBox "OK"
else
MsgBox "Failed"+EndOfLine+e.LocalizedDescription
end if
```

Notes:

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

56.5.39 Properties

56.5.40 CGContext as CGContextMBS

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The CGContextMBS targeted by this CIContext.
Notes: (Read and Write property)

56.5.41 description as String

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the textual description for this context.
Notes: (Read only property)

56.5.42 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The handle to the CIContext object used internally.
Notes: (Read only property)

56.5.43 Picture as Picture

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The picture used in the constructor (if any).
Notes: (Read and Write property)

56.5.44 Constants

56.5.45 kCIFormatA16 = 4

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Alpha with 16-bit.
Available in macOS 10.11 or newer.

56.5.46 kCIFormatA8 = 3

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Alpha with 8-bit.
Available in macOS 10.11 or newer.

56.5.47 kCIFormatABGR8 = 46

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

ABGR with 8-bit.
Available in macOS 10.11 or newer.

56.5.48 kCIFormatAf = 6

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Alpha with float values.
Available in macOS 10.11 or newer.

56.5.49 kCIFormatAh = 5

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Alpha with half floating point.
Available in macOS 10.11 or newer.

56.5.50 kCIFormatARGB8 = 23

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes: ARGB with 8-bit.

56.5.51 kCIFormatBGRA8 = 22

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes: BGRA with 8-bit.

56.5.52 kCIFormatR16 = 37

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Red with 16-bit.
Available in macOS 10.11 or newer.

56.5.53 kCIFormatR8 = 36

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Red with 8-bit.
Available in macOS 10.11 or newer.

56.5.54 kCIFormatRf = 39

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Red with floating point.
Available in macOS 10.11 or newer.

56.5.55 kCIFormatRG16 = 41

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Red and green with 16-bit.
Available in macOS 10.11 or newer.

56.5.56 kCIFormatRG8 = 40

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Red and green with 8-bit.
Available in macOS 10.11 or newer.

56.5.57 kCIFormatRGBA16 = 27

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes: RGBA with 16-bit.

56.5.58 kCIFormatRGBA8 = 24

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes: RGBA with 8-bit.

56.5.59 kCIFormatRGBAf = 34

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes: RGBA with floating point.

56.5.60 kCIFormatRGBAh = 31

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes: RGBA values that are IEEE 754-2008 half float compliant.

56.5.61 kCIFormatRGf = 43

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Red and green with floating point values.
Available in macOS 10.11 or newer.

56.5.62 kCIFormatRGh = 42

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Red and green with half precision floating point values.
Available in macOS 10.11 or newer.

56.5.63 kCIFormatRh = 38

MBS MacCI Plugin, Plugin Version: 17.3.

Function: One of the image format constants.
Notes:

Red with half precision floating point.
Available in macOS 10.11 or newer.

56.6 class CIDataMatrixCodeDescriptorMBS

56.6.1 class CIDataMatrixCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: CIDataMatrixCodeDescriptor is a concrete subclass of CIBarcodeDescriptor that defines an abstract representation of a Data Matrix code symbol.
Notes: Subclass of the CIBarcodeDescriptorMBS class.

56.6.2 Methods

56.6.3 Constructor(errorCorrectedPayload as MemoryBlock, rowCount as Integer, columnCount as Integer, eccVersion as integer)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Initializes a descriptor that can be used as input to CIBarcodeGenerator.

56.6.4 descriptorWithPayload(errorCorrectedPayload as MemoryBlock, rowCount as Integer, columnCount as Integer, eccVersion as integer) as CIDataMatrixCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a descriptor that can be used as input to CIBarcodeGenerator.

56.6.5 Properties

56.6.6 columnCount as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The number of module columns.
Notes:

Refer to ISO/IEC 16022:2006(E) for valid module row and column count combinations.
(Read only property)

56.6.7 eccVersion as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Data Matrix code ECC version.
Notes:

Valid values are 000, 050, 080, 100, 140, and 200. Any symbol with an even number of rows and columns will be ECC 200.

ECC 000 - 140 symbols offer five levels of error correction using convolutional code error correction. Each successive level of error correction offers more protection for the message data and increases the size of the symbol required to carry a specific message. ECC 000 symbols offer no data protection. The other modes are described in ISO/IEC 16022:2006 and enumerated in this list only for completeness.

ECC 200 symbols utilize Reed-Solomon error correction. The error correction capacity for any given Data Matrix symbol is fixed by the size (in rows and columns) of the symbol. See Table 7 of ISO/IEC 16022:2006(E) for more details.
(Read only property)

56.6.8 errorCorrectedPayload as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The error corrected payload that comprise the Data Matrix code symbol.
Notes:

DataMatrix symbols are specified bn ISO/IEC 16022:2006(E). ECC 200-type symbols will always have an even number of rows and columns.

For ECC 200-type symbols, the phases of encoding data into a symbol are described in section 5.1 – Encode procedure overview. The error corrected payload comprises the de-interleaved bits of the message described at the end of Step 1: Data encodation.
(Read only property)

56.6.9 rowCount as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The number of module rows.
Notes:

Refer to ISO/IEC 16022:2006(E) for valid module row and column count combinations.
(Read only property)

56.6.10 Constants

56.6.11 ECCVersion000 = 0

MBS MacCI Plugin, Plugin Version: 17.4.

Function: One of the constants indicating the Data Matrix code ECC version.
Notes: Indicates error correction using convolutional code error correction with no data protection.

56.6.12 ECCVersion050 = 50

MBS MacCI Plugin, Plugin Version: 17.4.

Function: One of the constants indicating the Data Matrix code ECC version.
Notes: Indicates 1/4 of the symbol is dedicated to convolutional code error correction.

56.6.13 ECCVersion080 = 80

MBS MacCI Plugin, Plugin Version: 17.4.

Function: One of the constants indicating the Data Matrix code ECC version.
Notes: Indicates 1/3 of the symbol is dedicated to convolutional code error correction.

56.6.14 ECCVersion100 = 100

MBS MacCI Plugin, Plugin Version: 17.4.

Function: One of the constants indicating the Data Matrix code ECC version.
Notes: Indicates 1/2 of the symbol is dedicated to convolutional code error correction.

56.6.15 ECCVersion140 = 140

MBS MacCI Plugin, Plugin Version: 17.4.

Function: One of the constants indicating the Data Matrix code ECC version.
Notes: Indicates 3/4 of the symbol is dedicated to convolutional code error correction.

56.6.16 ECCVersion200 = 200

MBS MacCI Plugin, Plugin Version: 17.4.

Function: One of the constants indicating the Data Matrix code ECC version.
Notes: Indicates error correction using Reed-Solomon error correction. Data protection overhead varies based on symbol size.

56.7 class CIDetectorMBS

56.7.1 class CIDetectorMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The Core Image class to detect features in images.
Notes: This class potentially holds onto a lot of state. Hence it may be beneficial from a performance perspective to re-use the same CIDetector instance. Specifying a CIContext when creating a detector may have an impact on performance since this context may be used when analyzing an image.

56.7.8 Methods

56.7.9 CIDetectorAccuracy as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The key in the options dictionary used to specify a accuracy / performance tradeoff to be used.

56.7.10 CIDetectorAccuracyHigh as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: One of the values for use with the CIDetectorAccuracy key.
Notes: Lower performance, higher accuracy

56.7.11 CIDetectorAccuracyLow as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: One of the values for use with the CIDetectorAccuracy key.
Notes: Lower accuracy, higher performance

56.7.12 CIDetectorAspectRatio as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the keys used in the options dictionary for featuresInImage.
Notes:

An option specifying the aspect ratio (width divided by height) of rectangles to search for.

The value of this key is an NSNumber object whose value is a positive floating-point number. Use this option with the CIDetectorTypeRectangle detector type to fine-tune the accuracy of the detector. For example, to more accurately find a business card (3.5 x 2 inches) in an image, specify an aspect ratio of 1.75 (3.5 / 2).

56.7.13 CIDetectorEyeBlink as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: An option for whether Core Image will perform additional processing to recognize closed eyes in detected faces.
Notes: Available in OS X v10.9 and later.

56.7.14 CIDetectorFocalLength as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the keys used in the options dictionary for featuresInImage.
Notes:

An option identifying the focal length used in capturing images to be processed by the detector.

The value of this key is an NSNumber object whose value is a floating-point number between -1.0 and 1.0. Use this option with the CIDetectorTypeRectangle detector type to fine-tune the accuracy of the detector.

56.7.15 CIDetectorImageOrientation as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: An option for the display orientation of the image whose features you want to detect.
Notes:

The value of this key is an NSNumber object whose value is an integer between 1 and 8. The TIFF and EXIF specifications define these values to indicate where the pixel coordinate origin (0,0) of the image should appear when it is displayed. The default value is 1, indicating that the origin is in the top left corner of the

image. For further details, see kCGImagePropertyOrientation.
Core Image only detects faces whose orientation matches that of the image. You should provide a value for this key if you want to detect faces in a different orientation.
Available in OS X v10.8 and later.

56.7.16 CIDetectorMaxFeatureCount as string

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for featuresInImage.
Notes:

For rectangle detector, the value for this key is an integer number from 1 ... 256 that represents the maximum number of features to return.
valid value range: 1 <= CIDetectorMaxFeatureCount <= 256. The default value is 1.

56.7.17 CIDetectorMinFeatureSize as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A key used to specify the minimum size that the detector will recognize as a feature.
Notes:

The value for this key is an NSNumber object ranging from 0.0 through 1.0 that represents a fraction of the minor dimension of the image.
Available in OS X v10.8 and later.

56.7.18 CIDetectorNumberOfAngles as string

MBS MacCI Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: One of the configuration keys.
Notes:

The number of perspectives to use for detecting a face in video input.

The value for this key is a number 1, 3, 5, 7, 9, or 11. At higher numbers of angles, face detection in video becomes more accurate, but at a higher computational cost.

Available in OS X 10.11 and later.

56.7.19 CIDetectorReturnSubFeatures as string

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for featuresInImage.
Notes: The value for this key is a bool. Controls whether the text detector should detect subfeatures or not. The default value is false. Requires 64-bit.

56.7.20 CIDetectorSmile as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: An option for whether Core Image will perform additional processing to recognize smiles in detected faces.
Notes: Available in OS X v10.9 and later.

56.7.21 CIDetectorTracking as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A key used to enable or disable face tracking for the detector.
Notes:

Use this option when you want to track faces across frames in a video.
Available in OS X v10.8 and later.

56.7.22 CIDetectorTypeFace as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Specifies a detector type for face recognition.

56.7.23 CIDetectorTypeQRCode as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the strings used to declare the detector for which you are interested.
Notes:

A detector that searches for Quick Response codes (a type of 2D barcode) in a still image or video, returning CIQRCodeFeature objects that provide information about detected barcodes.

This is Mac 64-bit only.

56.7.24 CIDetectorTypeRectangle as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the strings used to declare the detector for which you are interested.
Notes:

A detector that searches for rectangular areas in a still image or video, returning CIRectangleFeature objects that provide information about detected regions.

The rectangle detector finds areas that are likely to represent rectangular objects that appear in perspective in the image, such as papers or books seen on a desktop.

56.7.25 CIDetectorTypeText as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the strings used to declare the detector for which you are interested.
Notes:

A detector that searches for text in a still image or video, returning CITextFeature objects that provide information about detected regions.

The text detector finds areas that are likely to contain upright text, but does not perform optical character recognition.

56.7.26 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new CIDetectorMBS object for the given handle.
See also:

- 56.7.27 Constructor(type as string, context as CIContextMBS = nil, options as dictionary = nil) 10730

56.7.27 Constructor(type as string, context as CIContextMBS = nil, options as dictionary = nil)

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns a new detector instance of the given type.
Notes:

The type is used to specify the usage intent.
The context argument specifies the CIContext to be used to operate on the image. May be nil.

If the input image to featuresInImage is the output of a CoreImage operation, it may improve performance to specify the same context that was used to operate on that image.

The detector may do image processing in this context and if the image is on the GPU and the specified context is a GPU context this may avoid additional upload to / download from the GPU. If the input image is on the CPU (or the output from a CPU based context) specifying a GPU based context (or vice versa) may reduce performance.

The options parameter lets you optinally specify a accuracy / performance tradeoff. Can be nil or an empty dictionary.
See also:

- 56.7.26 Constructor(Handle as Integer) 10730

56.7.28 detectorOfType(type as string, context as CIContextMBS = nil, options as dictionary = nil) as CIDetectorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Returns a new detector instance of the given type.
Notes:

The type is used to specify the usage intent.
The context argument specifies the CIContext to be used to operate on the image. May be nil.

If the input image to featuresInImage is the output of a CoreImage operation, it may improve performance to specify the same context that was used to operate on that image.

The detector may do image processing in this context and if the image is on the GPU and the specified context is a GPU context this may avoid additional upload to / download from the GPU. If the input image is on the CPU (or the output from a CPU based context) specifying a GPU based context (or vice versa) may reduce performance.

The options parameter lets you optinally specify a accuracy / performance tradeoff. Can be nil or an empty dictionary.

56.7.29 featuresInImage(image as CIImageMBS) as CIFeatureMBS()

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns an array of CIFeature instances in the given image.
Notes: The array is sorted by confidence, highest confidence first.
See also:

- 56.7.30 featuresInImage(image as CIImageMBS, options as dictionary) as CIFeatureMBS() 10732

56.7.30 featuresInImage(image as CIImageMBS, options as dictionary) as CIFeatureMBS()

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns an array of CIFeature instances in the given image.
Notes:

The array is sorted by confidence, highest confidence first.
The options dictionary can contain a CIDetectorImageOrientation key value.
See also:

- 56.7.29 featuresInImage(image as CIImageMBS) as CIFeatureMBS() 10732

56.7.31 Properties

56.7.32 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

56.8 class CIFaceFeatureMBS

56.8.1 class CIFaceFeatureMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: A CIFaceFeature object describes a face detected in a picture.
Notes:

Its properties provide locations for the face's eyes and mouth.
All positions are relative to the original image.
Subclass of the CIFeatureMBS class.

56.8.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr7

56.8.3 Blog Entries

- MBS Real Studio Plugins, version 12.4pr7

56.8.4 Methods

56.8.5 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new CIFaceFeature object from a handle value.

56.8.6 Properties

56.8.7 faceAngle as Double

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The rotation of the face. (read-only)
Notes:

Rotation is measured counterclockwise in radians, with zero indicating that a line drawn between the eyes is horizontal relative to the image orientation.

Available in OS X v10.9 and later.
(Read only property)

56.8.8 hasFaceAngle as boolean

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether information about face rotation is available. (read-only)
Notes:

Available in OS X v10.9 and later.
(Read only property)

56.8.9 hasLeftEyePosition as boolean

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: A Boolean that indicates whether the detector found the face's left eye. (read-only)
Notes: (Read only property)

56.8.10 hasMouthPosition as boolean

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: A Boolean that indicates whether the detector found the face's mouth. (read-only)
Notes: (Read only property)

56.8.11 hasRightEyePosition as boolean

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: A Boolean that indicates whether the detector found the face's right eye. (read-only)
Notes: (Read only property)

56.8.12 hasSmile as boolean

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether a smile is detected in the face. (read-only)
Notes:

Available in OS X v10.9 and later.
For smiles to be detected, the key CIDetectorSmile must be present with a value of true in the dictionary passed to a detector's featuresInImage method.
(Read only property)

56.8.13 hasTrackingFrameCount as boolean

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Whether there is a tracking frame count.
Notes: (Read only property)

56.8.14 hasTrackingID as boolean

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Whether the tracking ID is set.
Notes: (Read only property)

56.8.15 leftEyeClosed as boolean

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the a closed left eye is detected in the face. (read-only)
Notes:

"Left" is relative to the original (non-mirrored) image orientation, not to the owner of the eye.

For closed eyes to be detected, the key CIDetectorEyeBlink must be present with a value of true in the dictionary passed to a detector's featuresInImage method.
Available in OS X v10.9 and later.
(Read only property)

56.8.16 leftEyePosition as CGPointMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The coordinates of the left eye, in image coordinates. (read-only)
Notes: (Read only property)

56.8.17 mouthPosition as CGPointMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The coordinates of the mouth eye, in image coordinates (read-only)
Notes: (Read only property)

56.8.18 rightEyeClosed as boolean

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the a closed left eye is detected in the face. (read-only)
Notes:

"Right" is relative to the original (non-mirrored) image orientation, not to the owner of the eye.

For closed eyes to be detected, the key CIDetectorEyeBlink must be present with a value of true in the dictionary passed to a detector's featuresInImage method.
Available in OS X v10.9 and later.
(Read only property)

56.8.19 rightEyePosition as CGPointMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The coordinates of the right eye, in image coordinates (read-only)
Notes: (Read only property)

56.8.20 trackingFrameCount as Integer

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The tracking frame count.
Notes: (Read only property)

56.8.21 trackingID as Integer

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The tracking ID.
Notes: (Read only property)

56.9 class CIFeatureMBS

56.9.1 class CIFeatureMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Generic feature found by a CIDetector.

56.9.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr7

56.9.3 Blog Entries

- MBS Real Studio Plugins, version 12.4pr7

56.9.4 Methods

56.9.5 CIFeatureTypeFace as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: One of the keys that define specific kinds of findable features.
Notes:

The discovered feature is a person's face.
Use the CIFaceFeatureMBS class to find more information about the detected feature.
Available in OS X v10.7 and later.

56.9.6 CIFeatureTypeQRCode as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the keys that define specific kinds of findable features.
Notes:

The discovered feature is a Quick Response code (2D barcode).
Use the CIQRCodeFeature class to find more information about the detected feature.
Available in OS X v10.11 and later.

56.9.7 CIFeatureTypeRectangle as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the keys that define specific kinds of findable features.
Notes:

The discovered feature is a rectangular object, though it might appear in perspective in the image.
Use the CIRectangleFeatureMBS class to find more information about the detected feature.
Available in OS X v10.10 and later.

56.9.8 CIFeatureTypeText as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the keys that define specific kinds of findable features.
Notes:

The discovered feature is a region likely to contain upright text.
Use the CITextFeature class to find more information about the detected feature.
Available in OS X v10.11 and later.

56.9.9 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new CIFeature object from a handle value.

56.9.10 Properties

56.9.11 bounds as CGRectMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The bounds of the feature in the image it was detected in.
Notes: (Read only property)

56.9.12 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

56.9.13 type as string

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The type of the feature.
Notes: (Read only property)

56.10 class CIFilterAccordionFoldTransitionMBS

56.10.1 class CIFilterAccordionFoldTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Accordion Fold Transition filter.
Notes:

Details for this filter:

FilterName:	CIAccordionFoldTransition
DisplayName English:	Accordion Fold Transition
DisplayName German:	Leporello-Übergang
DisplayName French:	Transition de type accordéon
DisplayName Italian:	Transizione foglio a fisarmonica
DisplayName Spanish:	Transición con pliegues a modo de acordeón

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputBottomHeight: Bottom Height
- inputNumberOfFolds: Number of Folds
- inputFoldShadowAmount: Fold Shadow Amount
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.10.2 Methods

56.10.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.10.4 Properties

56.10.5 AttributeinputBottomHeight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes:

This attribute should have this content:

Name:	inputBottomHeight
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Bottom Height
DisplayName German:	Abstand unten
DisplayName French:	Hauteur du bas
DisplayName Italian:	Altezza inferiore
DisplayName Spanish:	Altura inferior
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.10.6 AttributeinputFoldShadowAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes:

This attribute should have this content:

Name:	inputFoldShadowAmount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Fold Shadow Amount
DisplayName German:	Faltschattenumfang
DisplayName French:	Degré d'ombre des plis
DisplayName Italian:	Quantità d'ombreggiatura
DisplayName Spanish:	Cantidad de sombreado por doblado
DefaultNumber:	0.1
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.10.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.10.8 AttributeinputNumberOfFolds as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes:

This attribute should have this content:

Name:	inputNumberOfFolds
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Number of Folds
DisplayName German:	Anzahl der Falzungen:
DisplayName French:	Nombre de plis
DisplayName Italian:	Numero di campi
DisplayName Spanish:	Número de dobleces
DefaultNumber:	3
IdentityNumber:	0
MaxNumber:	50
MinNumber:	1
SliderMaxNumber:	10
SliderMinNumber:	1

(Read only property)

56.10.9 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes:

This attribute should have this content:

(Read only property)

56.10.10 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Accordion Fold Transition attribute.
Notes:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.10.11 inputBottomHeight as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bottom Height
Notes:

See AttributeinputBottomHeight for more details.
(Read and Write property)

Name:	inputBottomHeight
Class:	double (NSNumber)
DisplayName English:	Bottom Height
DisplayName German:	Abstand unten
DisplayName French:	Hauteur du bas
DisplayName Italian:	Altezza inferiore
DisplayName Spanish:	Altura inferior
Type:	CIAttributeTypeDistance

56.10.12 inputFoldShadowAmount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Fold Shadow Amount
Notes:

Name:	inputFoldShadowAmount
Class:	double (NSNumber)
DisplayName English:	Fold Shadow Amount
DisplayName German:	Faltschattenumfang
DisplayName French:	Degré d'ombre des plis
DisplayName Italian:	Quantità d'ombreggiatura
DisplayName Spanish:	Cantidad de sombreado por doblado
Type:	CIAttributeTypeScalar

See AttributeinputFoldShadowAmount for more details.
(Read and Write property)

56.10.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.10.14 inputNumberOfFolds as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Number of Folds
Notes:

Name:	inputNumberOfFolds
Class:	double (NSNumber)
DisplayName English:	Number of Folds
DisplayName German:	Anzahl der Falzungen:
DisplayName French:	Nombre de plis
DisplayName Italian:	Numero di campi
DisplayName Spanish:	Número de dobleces
Type:	CIAttributeTypeScalar

See AttributeinputNumberOfFolds for more details.
(Read and Write property)

56.10.15 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

56.10.16 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

56.11 class CIFilterAdditionCompositingMBS

56.11.1 class CIFilterAdditionCompositingMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Addition filter.
Notes:

Details for this filter:

FilterName:	CIAdditionCompositing
DisplayName English:	Addition
DisplayName German:	Addition
DisplayName French:	Addition
DisplayName Italian:	Aggiunta
DisplayName Spanish:	Adición

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.11.2 Methods

56.11.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.11.4 Properties

56.11.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Addition attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.11.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Addition attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.11.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.11.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.12 class CIFilterAffineClampMBS

56.12.1 class CIFilterAffineClampMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Affine Clamp filter.
Notes:

Details for this filter:

FilterName:	CIAffineClamp
DisplayName English:	Affine Clamp
DisplayName German:	Rand erweitern
DisplayName French:	Attache affine
DisplayName Italian:	Distanza affine
DisplayName Spanish:	Fijación afín

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTransform: Transform

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.12.2 Methods

56.12.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.12.4 Properties

56.12.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Affine Clamp attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.12.6 AttributeinputTransform as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Affine Clamp attribute.
Notes:

This attribute should have this content:

Name:	inputTransform
Class:	NSAffineTransformMBS
DisplayName English:	Transform
DisplayName German:	Transformation
DisplayName French:	Transformer
DisplayName Italian:	Trasforma
DisplayName Spanish:	Transformación
DefaultAffineTransform:	[0.4, 0, 0, 0.4, 0, 0]
IdentityAffineTransform:	[1, 0, 0, 1, 0, 0]

(Read only property)

56.12.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.12.8 inputTransform as NSAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Transform
Notes:

See AttributeinputTransform for more details.
(Read and Write property)

Name:	inputTransform
Class:	NSAffineTransformMBS (NSAffineTransform)
DisplayName English:	Transform
DisplayName German:	Transformation
DisplayName French:	Transformer
DisplayName Italian:	Trasforma
DisplayName Spanish:	Transformación
Type:	

56.13 class CIFilterAffineTileMBS

56.13.1 class CIFilterAffineTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Affine Tile filter.
Notes:

Details for this filter:

FilterName:	CIAffineTile
DisplayName English:	Affine Tile
DisplayName German:	Affin kacheln
DisplayName French:	Mosaïque affine
DisplayName Italian:	Mosaico affine
DisplayName Spanish:	Mosaico afín

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTransform: Transform

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.13.2 Methods

56.13.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.13.4 Properties

56.13.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Affine Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.13.6 AttributeinputTransform as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Affine Tile attribute.
Notes:

This attribute should have this content:

Name:	inputTransform
Class:	NSAffineTransformMBS
DisplayName English:	Transform
DisplayName German:	Transformation
DisplayName French:	Transformer
DisplayName Italian:	Trasforma
DisplayName Spanish:	Transformación
DefaultAffineTransform:	[0.4, 0, 0, 0.4, 0, 0]
IdentityAffineTransform:	[1, 0, 0, 1, 0, 0]

(Read only property)

56.13.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.13.8 inputTransform as NSAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Transform
Notes:

See AttributeinputTransform for more details.
(Read and Write property)

Name:	inputTransform
Class:	NSAffineTransformMBS (NSAffineTransform)
DisplayName English:	Transform
DisplayName German:	Transformation
DisplayName French:	Transformer
DisplayName Italian:	Trasforma
DisplayName Spanish:	Transformación
Type:	

56.14 class CIFilterAffineTransformMBS

56.14.1 class CIFilterAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Affine Transform filter.
Example:

```
// Rotate image with CoreImage

// load image
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim image as new CIImageMBS(f)

// rotate 45 degree
dim n as new NSAffineTransformMBS
n.rotateByDegrees(45)

dim TransformFilter as new CIFilterAffineTransformMBS
TransformFilter.inputImage = image
TransformFilter.inputTransform = n

// get result
dim resultImage as CIImageMBS = TransformFilter.outputImage

// for saving to file
dim outputImage as NSImageMBS = resultImage.RenderNSImage(false)

f = SpecialFolder.Desktop.Child("output.png")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write outputImage.PNGRepresentation

// as Xojo picture object for display
dim pic as Picture = outputImage.CopyPictureWithMask

Backdrop = pic
```

Notes:

Details for this filter:

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment

FilterName:	CIAffineTransform
DisplayName English:	Affine Transform
DisplayName German:	Affin transformieren
DisplayName French:	Affiner, transformer
DisplayName Italian:	Trasformazione affine
DisplayName Spanish:	Transformación afín

- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTransform: Transform

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.14.2 Blog Entries

- Tip of the day: Rotate image with CoreImage

56.14.3 Blog Entries

- Tip of the day: Rotate image with CoreImage

56.14.4 Methods

56.14.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.14.6 Properties

56.14.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Affine Transform attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.14.8 AttributeinputTransform as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Affine Transform attribute.
Notes:

This attribute should have this content:

Name:	inputTransform
Class:	NSAffineTransformMBS
Type:	CIAttributeTypeTransform
DisplayName English:	Transform
DisplayName German:	Transformation
DisplayName French:	Transformer
DisplayName Italian:	Trasforma
DisplayName Spanish:	Transformación
DefaultAffineTransform:	[1, 0, 0, 1, 0, 0]
IdentityAffineTransform:	[1, 0, 0, 1, 0, 0]

(Read only property)

56.14.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.14.10 inputTransform as NSAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Transform
Example:

```
// Rotate image with CoreImage

// load image
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim image as new CIImageMBS(f)

// rotate 45 degree
dim n as new NSAffineTransformMBS
n.rotateByDegrees(45)

dim TransformFilter as new CIFilterAffineTransformMBS
TransformFilter.inputImage = image
TransformFilter.inputTransform = n

// get result
dim resultImage as CIImageMBS = TransformFilter.outputImage
```

```
// for saving to file
dim outputImage as NSImageMBS = resultImage.RenderNSImage(false)

f = SpecialFolder.Desktop.Child("output.png")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write outputImage.PNGRepresentation

// as Xojo picture object for display
dim pic as Picture = outputImage.CopyPictureWithMask

Backdrop = pic
```

Notes:

Name:	inputTransform
Class:	NSAffineTransformMBS (NSAffineTransform)
DisplayName English:	Transform
DisplayName German:	Transformation
DisplayName French:	Transformer
DisplayName Italian:	Trasforma
DisplayName Spanish:	Transformación
Type:	CIAttributeTypeTransform

See AttributeinputTransform for more details.
(Read and Write property)

56.15 class CIFilterAreaAverageMBS

56.15.1 class CIFilterAreaAverageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Average filter.
Notes:

Details for this filter:

FilterName:	CIAreaAverage
DisplayName English:	Area Average
DisplayName German:	Bereichsdurchschnitt
DisplayName French:	Moyenne de la zone
DisplayName Italian:	Media area
DisplayName Spanish:	Media del área

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImageNonMPS
- outputImage

Subclass of the CIFilterMBS class.

56.15.2 Methods

56.15.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.15.4 Properties

56.15.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Average attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

56.15.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Average attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.15.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.15.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.16 class CIFilterAreaHistogramMBS

56.16.1 class CIFilterAreaHistogramMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Histogram filter.
Notes:

Details for this filter:

FilterName:	CIAreaHistogram
DisplayName English:	Area Histogram
DisplayName German:	Bereichs-Histogramm
DisplayName French:	Histogramme de la zone
DisplayName Italian:	Istogramma area
DisplayName Spanish:	Histograma del área

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent
- inputScale: Scale
- inputCount: Count

Output:

- outputData
- outputImageNonMPS
- outputImage

Subclass of the CIFilterMBS class.

56.16.2 Methods

56.16.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.16.4 Properties

56.16.5 AttributeinputCount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Histogram attribute.
Notes:

This attribute should have this content:

Name:	inputCount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Count
DisplayName German:	Anzahl
DisplayName French:	Compte
DisplayName Italian:	Conteggio
DisplayName Spanish:	Recuento
DefaultNumber:	64
IdentityNumber:	0
MaxNumber:	2048
MinNumber:	1
SliderMaxNumber:	1000
SliderMinNumber:	10

(Read only property)

56.16.6 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Histogram attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

56.16.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Histogram attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.16.8 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Histogram attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.16.9 inputCount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Count
Notes:

Name:	inputCount
Class:	double (NSNumber)
DisplayName English:	Count
DisplayName German:	Anzahl
DisplayName French:	Compte
DisplayName Italian:	Conteggio
DisplayName Spanish:	Recuento
Type:	CIAttributeTypeScalar

See AttributeinputCount for more details.
(Read and Write property)

56.16.10 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.16.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.16.12 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

See AttributeinputScale for more details.
(Read and Write property)

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

56.17 class CIFilterAreaMaximumAlphaMBS

56.17.1 class CIFilterAreaMaximumAlphaMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Maximum Alpha filter.
Notes:

Details for this filter:

FilterName:	CIAreaMaximumAlpha
DisplayName English:	Area Maximum Alpha
DisplayName German:	Bereichsmaximum im Alpha-Kanal
DisplayName French:	Alpha maximum de la zone
DisplayName Italian:	Alfa massimo area
DisplayName Spanish:	Alfa máximo del área

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.17.2 Methods

56.17.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.17.4 Properties

56.17.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Maximum Alpha attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

56.17.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Maximum Alpha attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.17.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.17.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.18 class CIFilterAreaMaximumMBS

56.18.1 class CIFilterAreaMaximumMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Maximum filter.
Notes:

Details for this filter:

FilterName:	CIAreaMaximum
DisplayName English:	Area Maximum
DisplayName German:	Bereichsmaximum
DisplayName French:	Maximum de la zone
DisplayName Italian:	Massimo area
DisplayName Spanish:	Máximo del área

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.18.2 Methods

56.18.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.18.4 Properties

56.18.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Maximum attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

56.18.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Maximum attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.18.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.18.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.19 class CIFilterAreaMinimumAlphaMBS

56.19.1 class CIFilterAreaMinimumAlphaMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Minimum Alpha filter.
Notes:

Details for this filter:

FilterName:	CIAreaMinimumAlpha
DisplayName English:	Area Minimum Alpha
DisplayName German:	Bereichsminimum im Alpha-Kanal
DisplayName French:	Alpha minimum de la zone
DisplayName Italian:	Alfa minimo area
DisplayName Spanish:	Alfa mínimo del área

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.19.2 Methods

56.19.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.19.4 Properties

56.19.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Minimum Alpha attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

56.19.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Minimum Alpha attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.19.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.19.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.20 class CIFilterAreaMinimumMBS

56.20.1 class CIFilterAreaMinimumMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Minimum filter.
Notes:

Details for this filter:

FilterName:	CIAreaMinimum
DisplayName English:	Area Minimum
DisplayName German:	Bereichsminimum
DisplayName French:	Minimum de la zone
DisplayName Italian:	Minimo area
DisplayName Spanish:	Mínimo del área

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.20.2 Methods

56.20.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.20.4 Properties

56.20.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Minimum attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

56.20.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Minimum attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.20.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.20.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.21 class CIFilterAreaMinMaxMBS

56.21.1 class CIFilterAreaMinMaxMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Min and Max filter.
Notes:

Details for this filter:

FilterName:	CIAreaMinMax
DisplayName English:	Area Min and Max
DisplayName German:	Fläche für min. und max.
DisplayName French:	Min. et max. de la zone
DisplayName Italian:	Minimo e massimo di rosso nell'area
DisplayName Spanish:	Mínimo y máximo en el área

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImageNonMPS
- outputImage

Subclass of the CIFilterMBS class.

56.21.2 Methods

56.21.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.21.4 Properties

56.21.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Min and Max attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

56.21.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Min and Max attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.21.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.21.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.22 class CIFilterAreaMinMaxRedMBS

56.22.1 class CIFilterAreaMinMaxRedMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Area Min and Max Red filter.
Notes:

Details for this filter:

FilterName:	CIAreaMinMaxRed
DisplayName English:	Area Min and Max Red
DisplayName German:	Fläche für Min. und Max. Rot
DisplayName French:	Rouge min. et max. de la zone
DisplayName Italian:	Minimo e massimo di rosso nell'area
DisplayName Spanish:	Mínimo y máximo de rojo en el área

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.22.2 Methods

56.22.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.22.4 Properties

56.22.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Min and Max Red attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

56.22.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Area Min and Max Red attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.22.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.22.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.23 class CIFilterAttributedTextImageGeneratorMBS

56.23.1 class CIFilterAttributedTextImageGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Attributed Text Image Generator filter.
Notes:

Details for this filter:

FilterName:	CIAttributedTextImageGenerator
DisplayName English:	Attributed Text Image Generator
DisplayName German:	Attributtextbildgenerator
DisplayName French:	Générateur d'image de texte attribué
DisplayName Italian:	Generatore immagine di testo attribuita
DisplayName Spanish:	Generador de imágenes con texto con atributos

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputText: Text
- inputScaleFactor: Scale Factor

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.23.2 Methods

56.23.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.23.4 Properties

56.23.5 AttributeinputScaleFactor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Attributed Text Image Generator attribute.
Notes:

This attribute should have this content:

Name:	inputScaleFactor
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d'échelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	4
SliderMinNumber:	1

(Read only property)

56.23.6 AttributeinputText as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Attributed Text Image Generator attribute.
Notes:

This attribute should have this content:

Name:	inputText
Class:	NSAttributedStringMBS
DisplayName:	Text

(Read only property)

56.23.7 inputScaleFactor as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale Factor
Notes:

Name:	inputScaleFactor
Class:	double (NSNumber)
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d'échelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
Type:	CIAttributeTypeScalar

See AttributeinputScaleFactor for more details.
(Read and Write property)

56.23.8 inputText as NSAttributedStringMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Text
Notes:

See AttributeinputText for more details.
(Read and Write property)

Name:	inputText
Class:	NSAttributedStringMBS (NSAttributedString)
DisplayName English:	Text
DisplayName German:	Text
DisplayName French:	Text
DisplayName Italian:	Text
DisplayName Spanish:	Text
Type:	

56.24 class CIFilterAztecCodeGeneratorMBS

56.24.1 class CIFilterAztecCodeGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Aztec Code Generator filter.
Notes:

Details for this filter:

FilterName:	CIAztecCodeGenerator
DisplayName English:	Aztec Code Generator
DisplayName German:	Aztec-Code-Generator
DisplayName French:	Générateur de code Aztec
DisplayName Italian:	Generatore codice Aztec
DisplayName Spanish:	Generador de código Aztec

Categories:

- CICategoryGenerator: Generator
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputMessage: Message
- inputCorrectionLevel: Correction Level
- inputLayers: Layers
- inputCompactStyle: Compact Style

Output:

- outputImage
- outputCGImage

Subclass of the CIFilterMBS class.

56.24.2 Methods

56.24.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.24.4 Properties

56.24.5 AttributeinputCompactStyle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Aztec Code Generator attribute.
Notes:

This attribute should have this content:

Name:	inputCompactStyle
Class:	double
DisplayName English:	Compact Style
DisplayName German:	Komprimierungsstil
DisplayName French:	Style compact
DisplayName Italian:	Stile compatto
DisplayName Spanish:	Estilo compacto
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.24.6 AttributeinputCorrectionLevel as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Aztec Code Generator attribute.
Notes:

This attribute should have this content:

Name:	inputCorrectionLevel
Class:	double
DisplayName English:	Correction Level
DisplayName German:	Korrekturstufe
DisplayName French:	Niveau de correction
DisplayName Italian:	Livello di correzione
DisplayName Spanish:	Nivel de corrección
DefaultNumber:	23
IdentityNumber:	0
MaxNumber:	95
MinNumber:	5
SliderMaxNumber:	95
SliderMinNumber:	5

(Read only property)

56.24.7 AttributeinputLayers as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Aztec Code Generator attribute.
Notes:

This attribute should have this content:

Name:	inputLayers
Class:	double
DisplayName English:	Layers
DisplayName German:	Ebenen
DisplayName French:	Couches
DisplayName Italian:	Livelli
DisplayName Spanish:	Capas
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	32
MinNumber:	1
SliderMaxNumber:	32
SliderMinNumber:	1

(Read only property)

56.24.8 AttributeinputMessage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Aztec Code Generator attribute.
Notes:

This attribute should have this content:

Name:	inputMessage
Class:	Memoryblock
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.24.9 inputCompactStyle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Compact Style
Notes:

Name:	inputCompactStyle
Class:	double (NSNumber)
DisplayName English:	Compact Style
DisplayName German:	Komprimierungsstil
DisplayName French:	Style compact
DisplayName Italian:	Stile compatto
DisplayName Spanish:	Estilo compacto
Type:	

See AttributeinputCompactStyle for more details.
(Read and Write property)

56.24.10 inputCorrectionLevel as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Correction Level
Notes:

Name:	inputCorrectionLevel
Class:	double (NSNumber)
DisplayName English:	Correction Level
DisplayName German:	Korrekturstufe
DisplayName French:	Niveau de correction
DisplayName Italian:	Livello di correzione
DisplayName Spanish:	Nivel de corrección
Type:	

See AttributeinputCorrectionLevel for more details.
(Read and Write property)

56.24.11 inputLayers as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Layers
Notes:

Name:	inputLayers
Class:	double (NSNumber)
DisplayName English:	Layers
DisplayName German:	Ebenen
DisplayName French:	Couches
DisplayName Italian:	Livelli
DisplayName Spanish:	Capas
Type:	

See AttributeinputLayers for more details.
(Read and Write property)

56.24.12 inputMessage as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Message
Notes:

Name:	inputMessage
Class:	Memoryblock (NSData)
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje
Type:	

See AttributeinputMessage for more details.
(Read and Write property)

56.25 class CIFilterBarcodeGeneratorMBS

56.25.1 class CIFilterBarcodeGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Barcode Generator filter.
Notes:

Details for this filter:

FilterName:	CIBarcodeGenerator
DisplayName English:	Barcode Generator
DisplayName German:	Barcode-Generator
DisplayName French:	Générateur de code-barres
DisplayName Italian:	Generatore codice a barre
DisplayName Spanish:	Generador de códigos de barras

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputBarcodeDescriptor: Barcode Descriptor

Output:

- outputCGImageForQRCodeDescriptor
- outputCGImageForAztecCodeDescriptor
- outputCGImageForPDF417CodeDescriptor
- outputCGImageForDataMatrixCodeDescriptor
- outputCGImage
- outputImage

Subclass of the CIFilterMBS class.

56.25.2 Videos

- Presentation from Munich conference about MBS Plugins.

56.25.3 Videos

- Presentation from Munich conference about MBS Plugins.

56.25.4 Methods

56.25.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.25.6 Properties

56.25.7 AttributeinputBarcodeDescriptor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Barcode Generator attribute.
Notes:

This attribute should have this content:

Name:	inputBarcodeDescriptor
Class:	CIBarcodeDescriptorMBS
DisplayName English:	Barcode Descriptor
DisplayName German:	Barcodebeschreibung
DisplayName French:	Descripteur du code-barres
DisplayName Italian:	Descrittore codice a barre
DisplayName Spanish:	Descriptor de código de barras

(Read only property)

56.25.8 inputBarcodeDescriptor as CIBarcodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Barcode Descriptor
Notes:

Name:	inputBarcodeDescriptor
Class:	CIBarcodeDescriptorMBS (CIBarcodeDescriptor)
DisplayName English:	Barcode Descriptor
DisplayName German:	Barcodebeschreibung
DisplayName French:	Descripteur du code-barres
DisplayName Italian:	Descrittore codice a barre
DisplayName Spanish:	Descriptor de código de barras
Type:	

See AttributeinputBarcodeDescriptor for more details.
(Read and Write property)

56.26 class CIFilterBarsSwipeTransitionMBS

56.26.1 class CIFilterBarsSwipeTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bars Swipe Transition filter.
Notes:

Details for this filter:

FilterName:	CIBarsSwipeTransition
DisplayName English:	Bars Swipe Transition
DisplayName German:	Balken-Swipe-Übergang
DisplayName French:	Transition de type balayage
DisplayName Italian:	Transizione colpi a barre
DisplayName Spanish:	Transición barras arañadas

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputAngle: Angle
- inputWidth: Width
- inputBarOffset: Bar Offset
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.26.2 Methods

56.26.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.26.4 Properties

56.26.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	3.141593
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	0

(Read only property)

56.26.6 AttributeinputBarOffset as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes:

This attribute should have this content:

Name:	inputBarOffset
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Bar Offset
DisplayName German:	Balkenversatz
DisplayName French:	Décalage de la barre
DisplayName Italian:	Scarto della barra
DisplayName Spanish:	Desviación barra
DefaultNumber:	10
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

(Read only property)

56.26.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.26.8 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes:

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.26.9 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes:

This attribute should have this content:

(Read only property)

56.26.10 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bars Swipe Transition attribute.
Notes:

This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	30
IdentityNumber:	0
MaxNumber:	0
MinNumber:	2
SliderMaxNumber:	300
SliderMinNumber:	2

(Read only property)

56.26.11 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

See AttributeinputAngle for more details.
(Read and Write property)

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

56.26.12 inputBarOffset as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bar Offset
Notes:

Name:	inputBarOffset
Class:	double (NSNumber)
DisplayName English:	Bar Offset
DisplayName German:	Balkenversatz
DisplayName French:	Décalage de la barre
DisplayName Italian:	Scarto della barra
DisplayName Spanish:	Desviación barra
Type:	CIAttributeTypeScalar

See AttributeinputBarOffset for more details.
(Read and Write property)

56.26.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.26.14 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

56.26.15 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

56.26.16 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

56.27 class CIFilterBicubicScaleTransformMBS

56.27.1 class CIFilterBicubicScaleTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bicubic Scale Transform filter.
Notes:

Details for this filter:

FilterName:	CIBicubicScaleTransform
DisplayName English:	Bicubic Scale Transform
DisplayName German:	Bikubische Skalierungstransformation
DisplayName French:	Transformation d'échelle bicubique
DisplayName Italian:	Trasforma scala bicubica
DisplayName Spanish:	Transformar mediante escala bicúbica

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputScale: Scale
- inputAspectRatio: Aspect Ratio
- inputB: B
- inputC: C

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.27.2 Methods

56.27.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.27.4 Properties

56.27.5 AttributeinputAspectRatio as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bicubic Scale Transform attribute.
Notes:

This attribute should have this content:

Name:	inputAspectRatio
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Aspect Ratio
DisplayName German:	Seitenverhältnis
DisplayName French:	Proportions
DisplayName Italian:	Proporzioni
DisplayName Spanish:	Proporciones
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	2
SliderMinNumber:	0.5

(Read only property)

56.27.6 AttributeinputB as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bicubic Scale Transform attribute.
Notes:

This attribute should have this content:

Name:	inputB
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	B
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.27.7 AttributeinputC as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bicubic Scale Transform attribute.
Notes:

This attribute should have this content:

Name:	inputC
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	C
DefaultNumber:	0.75
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.27.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bicubic Scale Transform attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.27.9 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bicubic Scale Transform attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	0.05

(Read only property)

56.27.10 inputAspectRatio as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Aspect Ratio
Notes:

Name:	inputAspectRatio
Class:	double (NSNumber)
DisplayName English:	Aspect Ratio
DisplayName German:	Seitenverhältnis
DisplayName French:	Proportions
DisplayName Italian:	Proporzioni
DisplayName Spanish:	Proporciones
Type:	CIAttributeTypeScalar

See AttributeinputAspectRatio for more details.
(Read and Write property)

56.27.11 inputB as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute B
Notes:

Name:	inputB
Class:	double (NSNumber)
DisplayName English:	B
DisplayName German:	B
DisplayName French:	B
DisplayName Italian:	B
DisplayName Spanish:	B
Type:	CIAttributeTypeScalar

See AttributeinputB for more details.
(Read and Write property)

56.27.12 inputC as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute C
Notes:

Name:	inputC
Class:	double (NSNumber)
DisplayName English:	C
DisplayName German:	C
DisplayName French:	C
DisplayName Italian:	C
DisplayName Spanish:	C
Type:	CIAttributeTypeScalar

See AttributeinputC for more details.
(Read and Write property)

56.27.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.27.14 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

See AttributeinputScale for more details.
(Read and Write property)

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

56.28 class CIFilterBlendWithAlphaMaskMBS

56.28.1 class CIFilterBlendWithAlphaMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Blend With Alpha Mask filter.
Notes:

Details for this filter:

FilterName:	CIBlendWithAlphaMask
DisplayName English:	Blend With Alpha Mask
DisplayName German:	Mit Alpha-Maske überblenden
DisplayName French:	Fusion avec masque Alpha
DisplayName Italian:	Sfumatura con maschera alfa
DisplayName Spanish:	Fusionar con la máscara alfa

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image
- inputMaskImage: Mask Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.28.2 Methods

56.28.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.28.4 Properties

56.28.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Alpha Mask attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.28.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Alpha Mask attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.28.7 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Alpha Mask attribute.
Notes:

This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.28.8 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.28.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.28.10 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

See AttributeinputMaskImage for more details.
(Read and Write property)

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
Type:	CIAttributeTypeImage

56.29 class CIFilterBlendWithBlueMaskMBS

56.29.1 class CIFilterBlendWithBlueMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Blend With Blue Mask filter.
Notes:

Details for this filter:

FilterName:	CIBlendWithBlueMask
DisplayName English:	Blend With Blue Mask
DisplayName German:	Mit blauer Maske
DisplayName French:	Fusion avec masque bleu
DisplayName Italian:	Sfumatura con maschera blu
DisplayName Spanish:	Fusionar con la máscara azul

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image
- inputMaskImage: Mask Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.29.2 Methods

56.29.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.29.4 Properties

56.29.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Blue Mask attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.29.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Blue Mask attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.29.7 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Blue Mask attribute.
Notes:

This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.29.8 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.29.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.29.10 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

See AttributeinputMaskImage for more details.
(Read and Write property)

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
Type:	CIAttributeTypeImage

56.30 class CIFilterBlendWithMaskMBS

56.30.1 class CIFilterBlendWithMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Blend With Mask filter.
Notes:

Details for this filter:

FilterName:	CIBlendWithMask
DisplayName English:	Blend With Mask
DisplayName German:	Mit Bild maskieren
DisplayName French:	Fusion avec masque
DisplayName Italian:	Sfumatura con maschera
DisplayName Spanish:	Fusionar con la máscara

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image
- inputMaskImage: Mask Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.30.2 Methods

56.30.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.30.4 Properties

56.30.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.30.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.30.7 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.30.8 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.30.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.30.10 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

See AttributeinputMaskImage for more details.
(Read and Write property)

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
Type:	CIAttributeTypeImage

56.31 class CIFilterBlendWithRedMaskMBS

56.31.1 class CIFilterBlendWithRedMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Blend With Red Mask filter.
Notes:

Details for this filter:

FilterName:	CIBlendWithRedMask
DisplayName English:	Blend With Red Mask
DisplayName German:	Mit roter Maske
DisplayName French:	Fusion avec masque rouge
DisplayName Italian:	Sfumatura con maschera rossa
DisplayName Spanish:	Fusionar con la máscara roja

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image
- inputMaskImage: Mask Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.31.2 Methods

56.31.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.31.4 Properties

56.31.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Red Mask attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.31.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Red Mask attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.31.7 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Blend With Red Mask attribute.
Notes:

This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.31.8 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.31.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.31.10 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

See AttributeinputMaskImage for more details.
(Read and Write property)

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
Type:	CIAttributeTypeImage

56.32 class CIFilterBloomMBS

56.32.1 class CIFilterBloomMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bloom filter.
Notes:

Details for this filter:

FilterName:	CIBloom
DisplayName English:	Bloom
DisplayName German:	Überstrahlen
DisplayName French:	Floraison
DisplayName Italian:	Velatura
DisplayName Spanish:	Veladura

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.32.2 Methods

56.32.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.32.4 Properties

56.32.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bloom attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.32.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bloom attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensität
DisplayName French:	Intensité
DisplayName Italian:	Intensità
DisplayName Spanish:	Intensidad
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.32.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bloom attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

(Read only property)

56.32.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.32.9 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensität
DisplayName French:	Intensité
DisplayName Italian:	Intensità
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

See AttributeinputIntensity for more details.
(Read and Write property)

56.32.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

56.33 class CIFilterBokehBlurMBS

56.33.1 class CIFilterBokehBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bokeh Blur filter.
Notes:

Details for this filter:

FilterName:	CIBokehBlur
DisplayName English:	Bokeh Blur
DisplayName German:	Bokeh unscharf
DisplayName French:	Bokeh (flou)
DisplayName Italian:	Sfocatura bokeh
DisplayName Spanish:	Desenfoque bokeh

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputRingAmount: Ring Amount
- inputRingSize: Ring Size
- inputSoftness: Softness

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.33.2 Methods

56.33.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.33.4 Properties

56.33.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bokeh Blur attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.33.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bokeh Blur attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	20
IdentityNumber:	0
MaxNumber:	500
MinNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

(Read only property)

56.33.7 AttributeinputRingAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bokeh Blur attribute.
Notes:

This attribute should have this content:

Name:	inputRingAmount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Ring Amount
DisplayName German:	Ringstärke
DisplayName French:	Intensité de l'anneau
DisplayName Italian:	Intensità anello
DisplayName Spanish:	Número de anillos
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.33.8 AttributeinputRingSize as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bokeh Blur attribute.
Notes:

This attribute should have this content:

Name:	inputRingSize
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Ring Size
DisplayName German:	Ringgröße
DisplayName French:	Taille de l'anneau
DisplayName Italian:	Dimensioni anello
DisplayName Spanish:	Tamaño del anillo
DefaultNumber:	0.1
IdentityNumber:	0
MaxNumber:	0.2
MinNumber:	0
SliderMaxNumber:	0.2
SliderMinNumber:	0

(Read only property)

56.33.9 AttributeinputSoftness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bokeh Blur attribute.
Notes:

This attribute should have this content:

(Read only property)

56.33.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputSoftness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Softness
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	10
MinNumber:	0
SliderMaxNumber:	0.4
SliderMinNumber:	0.25

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.33.11 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

56.33.12 inputRingAmount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Ring Amount
Notes:

Name:	inputRingAmount
Class:	double (NSNumber)
DisplayName English:	Ring Amount
DisplayName German:	Ringstärke
DisplayName French:	Intensité de l'anneau
DisplayName Italian:	Intensità anello
DisplayName Spanish:	Número de anillos
Type:	CIAttributeTypeScalar

See AttributeinputRingAmount for more details.
(Read and Write property)

56.33.13 inputRingSize as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Ring Size
Notes:

Name:	inputRingSize
Class:	double (NSNumber)
DisplayName English:	Ring Size
DisplayName German:	Ringgröße
DisplayName French:	Taille de l'anneau
DisplayName Italian:	Dimensioni anello
DisplayName Spanish:	Tamaño del anillo
Type:	CIAttributeTypeScalar

See AttributeinputRingSize for more details.
(Read and Write property)

56.33.14 inputSoftness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Softness
Notes:

Name:	inputSoftness
Class:	double (NSNumber)
DisplayName English:	Softness
DisplayName German:	Softness
DisplayName French:	Softness
DisplayName Italian:	Softness
DisplayName Spanish:	Softness
Type:	CIAttributeTypeScalar

See AttributeinputSoftness for more details.
(Read and Write property)

56.34 class CIFilterBoxBlurMBS

56.34.1 class CIFilterBoxBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Box Blur filter.
Notes:

Details for this filter:

FilterName:	CIBoxBlur
DisplayName English:	Box Blur
DisplayName German:	Quadratische Unschärfe
DisplayName French:	Flou (Box blur)
DisplayName Italian:	Sfocatura riquadro
DisplayName Spanish:	Caja difuminada

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.34.2 Methods

56.34.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.34.4 Properties

56.34.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Box Blur attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.34.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Box Blur attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

(Read only property)

56.34.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.34.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

56.35 class CIFilterBumpDistortionLinearMBS

56.35.1 class CIFilterBumpDistortionLinearMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bump Distortion Linear filter.
Notes:

Details for this filter:

FilterName:	CIBumpDistortionLinear
DisplayName English:	Bump Distortion Linear
DisplayName German:	Verzerrung „Bump“ (Linear)
DisplayName French:	Déformation Bosse linéaire
DisplayName Italian:	Lineare distorsione urto
DisplayName Spanish:	Distorsión linear suplementaria

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputAngle: Angle
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.35.2 Methods

56.35.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.35.4 Properties

56.35.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion Linear attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	0

(Read only property)

56.35.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion Linear attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.35.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion Linear attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.35.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion Linear attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	0
SliderMaxNumber:	600
SliderMinNumber:	0

(Read only property)

56.35.9 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion Linear attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	0.5
IdentityNumber:	1
MaxNumber:	0
MinNumber:	-1
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.35.10 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

56.35.11 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.35.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.35.13 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

56.35.14 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

See AttributeinputScale for more details.
(Read and Write property)

56.36 class CIFilterBumpDistortionMBS

56.36.1 class CIFilterBumpDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Bump Distortion filter.
Notes:

Details for this filter:

FilterName:	CIBumpDistortion
DisplayName English:	Bump Distortion
DisplayName German:	Verzerrung „Bump“
DisplayName French:	Déformation Bosse
DisplayName Italian:	Distorsione urto
DisplayName Spanish:	Distorsión suplementaria

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.36.2 Methods

56.36.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.36.4 Properties

56.36.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.36.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.36.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	0
SliderMaxNumber:	600
SliderMinNumber:	0

(Read only property)

56.36.8 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Bump Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	-1

(Read only property)

56.36.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.36.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.36.11 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

56.36.12 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

See AttributeinputScale for more details.
(Read and Write property)

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

56.37 class CIFilterCameraCalibrationLensCorrectionMBS

56.37.1 class CIFilterCameraCalibrationLensCorrectionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Lens Correction for AVC filter.
Notes:

Details for this filter:

FilterName:	CICameraCalibrationLensCorrection
DisplayName English:	Lens Correction for AVC
DisplayName German:	Objektivkorrektur: AVC
DisplayName French:	Correction d'objectif pour AVC
DisplayName Italian:	Correzione lente AVC
DisplayName Spanish:	Corrección de lente para AVC

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputAVCameraCalibrationData: Calibration Data object of type AVCameraCalibrationData
- inputUseInverseLookUpTable: Use Inverse Look Up Table

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.37.2 Methods

56.37.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.37.4 Properties

56.37.5 AttributeinputAVCameraCalibrationData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lens Correction for AVC attribute.
Notes:

This attribute should have this content:

Name:	inputAVCameraCalibrationData
Class:	Variant
DisplayName:	Calibration Data object of type AVCameraCalibrationData

(Read only property)

56.37.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lens Correction for AVC attribute.
Notes:

This attribute should have this content:

(Read only property)

56.37.7 AttributeinputUseInverseLookUpTable as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

Function: Details about the Lens Correction for AVC attribute.
Notes:

This attribute should have this content:

Name:	inputUseInverseLookUpTable
Class:	double
DisplayName:	Use Inverse Look Up Table
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.37.8 inputAVCameraCalibrationData as Variant

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Calibration Data object of type AVCameraCalibrationData
Notes:

Name:	inputAVCameraCalibrationData
Class:	Variant (AVCameraCalibrationData)
DisplayName English:	Calibration Data object of type AVCameraCalibrationData
DisplayName German:	Calibration Data object of type AVCameraCalibrationData
DisplayName French:	Calibration Data object of type AVCameraCalibrationData
DisplayName Italian:	Calibration Data object of type AVCameraCalibrationData
DisplayName Spanish:	Calibration Data object of type AVCameraCalibrationData
Type:	

See AttributeinputAVCameraCalibrationData for more details.
(Read and Write property)

56.37.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.37.10 inputUseInverseLookUpTable as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Use Inverse Look Up Table
Notes:

Name:	inputUseInverseLookUpTable
Class:	double (NSNumber)
DisplayName English:	Use Inverse Look Up Table
DisplayName German:	Use Inverse Look Up Table
DisplayName French:	Use Inverse Look Up Table
DisplayName Italian:	Use Inverse Look Up Table
DisplayName Spanish:	Use Inverse Look Up Table
Type:	

See AttributeinputUseInverseLookUpTable for more details.
(Read and Write property)

56.38 class CIFilterCheckerboardGeneratorMBS

56.38.1 class CIFilterCheckerboardGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Checkerboard filter.
Notes:

Details for this filter:

FilterName:	CICheckerboardGenerator
DisplayName English:	Checkerboard
DisplayName German:	Schachbrettmuster
DisplayName French:	Damier
DisplayName Italian:	Scacchiera
DisplayName Spanish:	Tablero

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputCenter: Center
- inputColor0: Color 1
- inputColor1: Color 2
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.38.2 Methods

56.38.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.38.4 Properties

56.38.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Checkerboard attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.38.6 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Checkerboard attribute.
Notes:

This attribute should have this content:

Name:	inputColor0
Class:	CIColorMBS
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

56.38.7 AttributeinputColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Checkerboard attribute.
Notes:

This attribute should have this content:

Name:	inputColor1
Class:	CIColorMBS
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
DefaultColor:	Red = 0, Green = 0, Blue = 0, Alpha = 1
IdentityNumber:	0

(Read only property)

56.38.8 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Checkerboard attribute.
Notes:

This attribute should have this content:

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Sharpness
DisplayName German:	Schärfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.38.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Checkerboard attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	80
IdentityNumber:	0
SliderMaxNumber:	800
SliderMinNumber:	0

(Read only property)

56.38.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.38.11 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	

See AttributeinputColor0 for more details.
(Read and Write property)

56.38.12 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	

See AttributeinputColor1 for more details.
(Read and Write property)

56.38.13 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Schärfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

56.38.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

56.39 class CIFilterCircleSplashDistortionMBS

56.39.1 class CIFilterCircleSplashDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Circle Splash Distortion filter.
Notes:

Details for this filter:

FilterName:	CICircleSplashDistortion
DisplayName English:	Circle Splash Distortion
DisplayName German:	Verzerrung „Kreisförmiger Platscher“
DisplayName French:	Déformation Éclaboussure circulaire
DisplayName Italian:	Distorsione spruzzo circolare
DisplayName Spanish:	Distorsión a modo de salpicadura en círculo

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.39.2 Methods

56.39.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.39.4 Properties

56.39.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circle Splash Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.39.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circle Splash Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.39.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circle Splash Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	150
IdentityNumber:	0
SliderMaxNumber:	1000
SliderMinNumber:	0

(Read only property)

56.39.8 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.39.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.39.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

56.40 class CIFilterCircularScreenMBS

56.40.1 class CIFilterCircularScreenMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Circular Screen filter.
Notes:

Details for this filter:

FilterName:	CICircularScreen
DisplayName English:	Circular Screen
DisplayName German:	Konzentrisches Halbtonraster
DisplayName French:	Écran circulaire
DisplayName Italian:	Schermo circolare
DisplayName Spanish:	Pantalla circular

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.40.2 Methods

56.40.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.40.4 Properties

56.40.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Screen attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.40.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Screen attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.40.7 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Screen attribute.
Notes:

This attribute should have this content:

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Sharpness
DisplayName German:	Schärfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.7
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.40.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Screen attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	6
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	50
SliderMinNumber:	2

(Read only property)

56.40.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.40.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.40.11 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Schärfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

56.40.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

56.41 class CIFilterCircularWrapMBS

56.41.1 class CIFilterCircularWrapMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Circular Wrap Distortion filter.
Example:

```
dim p as Picture = LogoMBS(500)
dim data as string = PictureToPNGStringMBS(p,80)
dim i as new CIImageMBS(data)

dim c as new CIFilterCircularWrapMBS
c.inputImage = i

dim o as CIImageMBS = c.outputImage
Backdrop = o.RenderPicture
```

Notes:

Details for this filter:

FilterName:	CICircularWrap
DisplayName English:	Circular Wrap Distortion
DisplayName German:	Kreisförmig krümmen
DisplayName French:	Déformation Bouclage circulaire
DisplayName Italian:	Distorsione involucro circolare
DisplayName Spanish:	Distorsión a modo de envoltura circular

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

- inputCenter: Center
- inputRadius: Radius
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.41.2 Methods

56.41.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.41.4 Properties

56.41.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Wrap Distortion attribute.
Notes:

This attribute should have this content:

(Read only property)

56.41.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Wrap Distortion attribute.
Notes:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

This attribute should have this content:

(Read only property)

56.41.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Wrap Distortion attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

56.41.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Circular Wrap Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	150
IdentityNumber:	0
SliderMaxNumber:	600
SliderMinNumber:	0

(Read only property)

56.41.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Example:

```
dim p as Picture = LogoMBS(500)
dim data as string = PictureToPNGStringMBS(p,80)
```

```
dim i as new CIImageMBS(data)

dim c as new CIFilterCircularWrapMBS
c.inputImage = i
c.inputAngle = 0.1

dim o as CIImageMBS = c.outputImage
Backdrop = o.RenderPicture
```

Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

56.41.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.41.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Example:

```
dim p as Picture = LogoMBS(500)
dim data as string = PictureToPNGStringMBS(p,80)
dim i as new CIImageMBS(data)

dim c as new CIFilterCircularWrapMBS
c.inputImage = i

dim o as CIImageMBS = c.outputImage
Backdrop = o.RenderPicture
```

Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.41.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

56.42 class CIFilterClampMBS

56.42.1 class CIFilterClampMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Clamp filter.
Notes:

Details for this filter:

FilterName:	CIClamp
DisplayName English:	Clamp
DisplayName German:	Arretieren
DisplayName French:	Attacher
DisplayName Italian:	Morsetto
DisplayName Spanish:	Fijar

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.42.2 Methods

56.42.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.42.4 Properties

56.42.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Clamp attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

56.42.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Clamp attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.42.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.42.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.43 class CIFilterCMYKHalftoneMBS

56.43.1 class CIFilterCMYKHalftoneMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage CMYK Halftone filter.
Notes:

Details for this filter:

FilterName:	CICMYKHalftone
DisplayName English:	CMYK Halftone
DisplayName German:	CMYK-Halbton
DisplayName French:	Demi-teinte CMJN
DisplayName Italian:	Mezzitoni CMYK
DisplayName Spanish:	Semitono CMYK

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputWidth: Width
- inputAngle: Angle
- inputSharpness: Sharpness
- inputGCR: Gray Component Replacement
- inputUCR: Under Color Removal

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.43.2 Methods

56.43.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.43.4 Properties

56.43.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

56.43.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.43.7 AttributeinputGCR as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes:

This attribute should have this content:

Name:	inputGCR
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Gray Component Replacement
DisplayName German:	Graukomponente ersetzen
DisplayName French:	Remplacement de la composante grise
DisplayName Italian:	Sostituzione componente grigio
DisplayName Spanish:	Sustitución de componente gris
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.43.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.43.9 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes:

This attribute should have this content:

(Read only property)

56.43.10 AttributeinputUCR as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes:

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Sharpness
DisplayName German:	Schärfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.7
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

This attribute should have this content:

Name:	inputUCR
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Under Color Removal
DisplayName German:	Unterfarben-Korrektur
DisplayName French:	Élimination des sous-couleurs
DisplayName Italian:	Rimozione colore inferiore
DisplayName Spanish:	Bajo supresión de color
DefaultNumber:	0.5
IdentityNumber:	0.5
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.43.11 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the CMYK Halftone attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	6
IdentityNumber:	6
MaxNumber:	0
MinNumber:	-2
SliderMaxNumber:	100
SliderMinNumber:	2

56.43.12 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

56.43.13 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

See AttributeinputCenter for more details.
(Read and Write property)

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

56.43.14 inputGCR as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Gray Component Replacement
Notes:

Name:	inputGCR
Class:	double (NSNumber)
DisplayName English:	Gray Component Replacement
DisplayName German:	Graukomponente ersetzen
DisplayName French:	Remplacement de la composante grise
DisplayName Italian:	Sostituzione componente grigio
DisplayName Spanish:	Sustitución de componente gris
Type:	CIAttributeTypeScalar

See AttributeinputGCR for more details.
(Read and Write property)

56.43.15 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.43.16 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Schärfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeDistance

See AttributeinputSharpness for more details.
(Read and Write property)

56.43.17 inputUCR as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Under Color Removal
Notes:

Name:	inputUCR
Class:	double (NSNumber)
DisplayName English:	Under Color Removal
DisplayName German:	Unterfarben-Korrektur
DisplayName French:	Élimination des sous-couleurs
DisplayName Italian:	Rimozione colore inferiore
DisplayName Spanish:	Bajo supresión de color
Type:	CIAttributeTypeScalar

See AttributeinputUCR for more details.
(Read and Write property)

56.43.18 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

56.44 class CIFilterCode128BarcodeGeneratorMBS

56.44.1 class CIFilterCode128BarcodeGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Code 128 Barcode Generator filter.
Notes:

Details for this filter:

FilterName:	CICode128BarcodeGenerator
DisplayName English:	Code 128 Barcode Generator
DisplayName German:	Code 128 Barcode-Generator
DisplayName French:	Générateur de code-barres Code 128
DisplayName Italian:	Generatore codice a barre Code128
DisplayName Spanish:	Generador de códigos de barras Code128

Categories:

- CICategoryGenerator: Generator
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputMessage: Message
- inputQuietSpace: Quiet Space
- inputBarcodeHeight: Barcode Height

Output:

- outputImage
- outputCGImage

Subclass of the CIFilterMBS class.

56.44.2 Videos

- Presentation from Munich conference about MBS Plugins.

56.44.3 Videos

- Presentation from Munich conference about MBS Plugins.

56.44.4 Methods

56.44.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.44.6 Properties

56.44.7 AttributeinputBarcodeHeight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Code 128 Barcode Generator attribute.
Notes:

This attribute should have this content:

Name:	inputBarcodeHeight
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Barcode Height
DisplayName German:	Barcodehöhe
DisplayName French:	Hauteur du code-barres
DisplayName Italian:	Altezza codice a barre
DisplayName Spanish:	Altura del código de barras
DefaultNumber:	32
IdentityNumber:	0
MaxNumber:	500
MinNumber:	1
SliderMaxNumber:	50
SliderMinNumber:	1

(Read only property)

56.44.8 AttributeinputMessage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Code 128 Barcode Generator attribute.
Notes:

This attribute should have this content:

Name:	inputMessage
Class:	Memoryblock
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.44.9 AttributeinputQuietSpace as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Code 128 Barcode Generator attribute.
Notes:

This attribute should have this content:

(Read only property)

56.44.10 inputBarcodeHeight as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Barcode Height
Notes:

Name:	inputQuietSpace
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Quiet Space
DisplayName German:	Ruheraum
DisplayName French:	Marge
DisplayName Italian:	Area non interattiva
DisplayName Spanish:	Espacio sin modificaciones
DefaultNumber:	7
IdentityNumber:	0
MaxNumber:	100
MinNumber:	0
SliderMaxNumber:	20
SliderMinNumber:	0

Name:	inputBarcodeHeight
Class:	double (NSNumber)
DisplayName English:	Barcode Height
DisplayName German:	Barcodehöhe
DisplayName French:	Hauteur du code-barres
DisplayName Italian:	Altezza codice a barre
DisplayName Spanish:	Altura del código de barras
Type:	CIAttributeTypeScalar

See AttributeinputBarcodeHeight for more details.
(Read and Write property)

56.44.11 inputMessage as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Message
Notes:

Name:	inputMessage
Class:	Memoryblock (NSData)
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje
Type:	

See AttributeinputMessage for more details.
(Read and Write property)

56.44.12 inputQuietSpace as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Quiet Space
Notes:

Name:	inputQuietSpace
Class:	double (NSNumber)
DisplayName English:	Quiet Space
DisplayName German:	Ruheraum
DisplayName French:	Marge
DisplayName Italian:	Area non interattiva
DisplayName Spanish:	Espacio sin modificaciones
Type:	CIAttributeTypeScalar

See AttributeinputQuietSpace for more details.
(Read and Write property)

56.45 class CIFilterColorBlendModeMBS

56.45.1 class CIFilterColorBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIColorBlendMode
DisplayName English:	Color Blend Mode
DisplayName German:	Mischmethode „Farbe“
DisplayName French:	Mode de fusion des couleurs
DisplayName Italian:	Modalità sfumatura colore
DisplayName Spanish:	Modo de mezcla de color

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.45.2 Methods

56.45.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.45.4 Properties

56.45.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.45.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.45.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.45.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.46 class CIFilterColorBurnBlendModeMBS

56.46.1 class CIFilterColorBurnBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Burn Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIColorBurnBlendMode
DisplayName English:	Color Burn Blend Mode
DisplayName German:	Mischmethode „Farbig nachbelichten“
DisplayName French:	Mode de fusion Densité couleur
DisplayName Italian:	Modalità sfumatura colore bruciato
DisplayName Spanish:	Modo de mezcla por sobreexposición de color

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.46.2 Methods

56.46.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.46.4 Properties

56.46.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Burn Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.46.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Burn Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.46.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.46.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.47 class CIFilterColorClampMBS

56.47.1 class CIFilterColorClampMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Clamp filter.
Notes:

Details for this filter:

FilterName:	CIColorClamp
DisplayName English:	Color Clamp
DisplayName German:	Color Clamp
DisplayName French:	Limitation de la couleur
DisplayName Italian:	Fissaggio colore
DisplayName Spanish:	Fijación del color

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputMinComponents: Min Components
- inputMaxComponents: Max Components

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.47.2 Methods

56.47.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.47.4 Properties

56.47.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Clamp attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.47.6 AttributeinputMaxComponents as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Clamp attribute.
Notes:

This attribute should have this content:

Name:	inputMaxComponents
Class:	CIVectorMBS
DisplayName English:	Max Components
DisplayName German:	Max. Komponenten
DisplayName French:	Composantes max.
DisplayName Italian:	Componenti Max
DisplayName Spanish:	Máx. de componentes
DefaultVector:	[1 1 1 1]
IdentityVector:	n/a

(Read only property)

56.47.7 AttributeinputMinComponents as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Clamp attribute.
Notes:

This attribute should have this content:

Name:	inputMinComponents
Class:	CIVectorMBS
DisplayName English:	Min Components
DisplayName German:	Min. Komponenten
DisplayName French:	Composantes min.
DisplayName Italian:	Componenti Min
DisplayName Spanish:	Mín. de componentes
DefaultVector:	[0 0 0 0]
IdentityVector:	n/a

(Read only property)

56.47.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.47.9 inputMaxComponents as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Max Components
Notes:

Name:	inputMaxComponents
Class:	CIVectorMBS (CIVector)
DisplayName English:	Max Components
DisplayName German:	Max. Komponenten
DisplayName French:	Composantes max.
DisplayName Italian:	Componenti Max
DisplayName Spanish:	Máx. de componentes
Type:	

See AttributeinputMaxComponents for more details.
(Read and Write property)

56.47.10 inputMinComponents as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Min Components
Notes:

See AttributeinputMinComponents for more details.
(Read and Write property)

Name:	inputMinComponents
Class:	CIVectorMBS (CIVector)
DisplayName English:	Min Components
DisplayName German:	Min. Komponenten
DisplayName French:	Composantes min.
DisplayName Italian:	Componenti Min
DisplayName Spanish:	Mín. de componentes
Type:	

56.48 class CIFilterColorControlsMBS

56.48.1 class CIFilterColorControlsMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Controls filter.
Notes:

Details for this filter:

FilterName:	CIColorControls
DisplayName English:	Color Controls
DisplayName German:	Farbsteuerung
DisplayName French:	Contrôle des couleurs
DisplayName Italian:	Controlli colore
DisplayName Spanish:	Controles de color

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputSaturation: Saturation
- inputBrightness: Brightness
- inputContrast: Contrast

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.48.2 Methods

56.48.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.48.4 Properties

56.48.5 AttributeinputBrightness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Controls attribute.
Notes:

This attribute should have this content:

Name:	inputBrightness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Brightness
DisplayName German:	Helligkeit
DisplayName French:	Luminosité
DisplayName Italian:	Luminosità
DisplayName Spanish:	Brillo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	0
MinNumber:	-1
SliderMaxNumber:	1
SliderMinNumber:	-1

(Read only property)

56.48.6 AttributeinputContrast as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Controls attribute.
Notes:

This attribute should have this content:

Name:	inputContrast
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Contrast
DisplayName German:	Kontrast
DisplayName French:	Contraste
DisplayName Italian:	Contrasto
DisplayName Spanish:	Contraste
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	4
SliderMinNumber:	0.25

(Read only property)

56.48.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Controls attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.48.8 AttributeinputSaturation as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Controls attribute.
Notes:

This attribute should have this content:

Name:	inputSaturation
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Saturation
DisplayName German:	Sättigung
DisplayName French:	Saturation
DisplayName Italian:	Saturazione
DisplayName Spanish:	Saturación
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	2
SliderMinNumber:	0

(Read only property)

56.48.9 inputBrightness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Brightness
Notes:

Name:	inputBrightness
Class:	double (NSNumber)
DisplayName English:	Brightness
DisplayName German:	Helligkeit
DisplayName French:	Luminosité
DisplayName Italian:	Luminosità
DisplayName Spanish:	Brillo
Type:	CIAttributeTypeScalar

See AttributeinputBrightness for more details.
(Read and Write property)

56.48.10 inputContrast as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Contrast
Notes:

Name:	inputContrast
Class:	double (NSNumber)
DisplayName English:	Contrast
DisplayName German:	Kontrast
DisplayName French:	Contraste
DisplayName Italian:	Contrasto
DisplayName Spanish:	Contraste
Type:	CIAttributeTypeScalar

See AttributeinputContrast for more details.
(Read and Write property)

56.48.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.48.12 inputSaturation as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Saturation
Notes:

Name:	inputSaturation
Class:	double (NSNumber)
DisplayName English:	Saturation
DisplayName German:	Sättigung
DisplayName French:	Saturation
DisplayName Italian:	Saturazione
DisplayName Spanish:	Saturación
Type:	CIAttributeTypeScalar

See AttributeinputSaturation for more details.
(Read and Write property)

56.49 class CIFilterColorCrossPolynomialMBS

56.49.1 class CIFilterColorCrossPolynomialMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Cross Polynomial filter.
Notes:

Details for this filter:

FilterName:	CIColorCrossPolynomial
DisplayName English:	Color Cross Polynomial
DisplayName German:	Farbüberblend-Polynom
DisplayName French:	Fonction polynomiale croisée de couleur
DisplayName Italian:	Polinomio cromatico incrociato
DisplayName Spanish:	Polinomio cruzado cromático

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRedCoefficients: Red Coefficients
- inputGreenCoefficients: Green Coefficients
- inputBlueCoefficients: Blue Coefficients

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.49.2 Methods

56.49.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.49.4 Properties

56.49.5 AttributeinputBlueCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cross Polynomial attribute.
Notes:

This attribute should have this content:

Name:	inputBlueCoefficients
Class:	CIVectorMBS
DisplayName English:	Blue Coefficients
DisplayName German:	Blau-Koeffizienten
DisplayName French:	Coefficients Bleu
DisplayName Italian:	Coefficienti colore blu
DisplayName Spanish:	Coeficientes de azul
DefaultVector:	[0 0 1 0 0 0 0 0 0 0]
IdentityVector:	[0 0 1 0 0 0 0 0 0 0]

(Read only property)

56.49.6 AttributeinputGreenCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cross Polynomial attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputGreenCoefficients
Class:	CIVectorMBS
DisplayName English:	Green Coefficients
DisplayName German:	Grün-Koeffizienten
DisplayName French:	Coefficients Vert
DisplayName Italian:	Coefficienti colore verde
DisplayName Spanish:	Coeficientes de verde
DefaultVector:	[0 1 0 0 0 0 0 0 0 0]
IdentityVector:	[0 1 0 0 0 0 0 0 0 0]

56.49.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cross Polynomial attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.49.8 AttributeinputRedCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cross Polynomial attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputRedCoefficients
Class:	CIVectorMBS
DisplayName English:	Red Coefficients
DisplayName German:	Rot-Koeffizienten
DisplayName French:	Coefficients Rouge
DisplayName Italian:	Coefficienti colore rosso
DisplayName Spanish:	Coeficientes de rojo
DefaultVector:	[1 0 0 0 0 0 0 0 0 0]
IdentityVector:	[1 0 0 0 0 0 0 0 0 0]

56.49.9 inputBlueCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Blue Coefficients
Notes:

Name:	inputBlueCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Blue Coefficients
DisplayName German:	Blau-Koeffizienten
DisplayName French:	Coefficients Bleu
DisplayName Italian:	Coefficienti colore blu
DisplayName Spanish:	Coeficientes de azul
Type:	

See AttributeinputBlueCoefficients for more details.
(Read and Write property)

56.49.10 inputGreenCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Green Coefficients
Notes:

See AttributeinputGreenCoefficients for more details.
(Read and Write property)

56.49.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputGreenCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Green Coefficients
DisplayName German:	Grün-Koeffizienten
DisplayName French:	Coefficients Vert
DisplayName Italian:	Coefficienti colore verde
DisplayName Spanish:	Coeficientes de verde
Type:	

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.49.12 inputRedCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Red Coefficients
Notes:

Name:	inputRedCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Red Coefficients
DisplayName German:	Rot-Koeffizienten
DisplayName French:	Coefficients Rouge
DisplayName Italian:	Coefficienti colore rosso
DisplayName Spanish:	Coeficientes de rojo
Type:	

See AttributeinputRedCoefficients for more details.
(Read and Write property)

56.50 class CIFilterColorCubeMBS

56.50.1 class CIFilterColorCubeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Cube filter.
Notes:

Details for this filter:

FilterName:	CIColorCube
DisplayName English:	Color Cube
DisplayName German:	Farbwürfel
DisplayName French:	Cube de couleur
DisplayName Italian:	Cubo colore
DisplayName Spanish:	Cubo de color

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCubeDimension: Cube Dimension
- inputCubeData: Cube Data

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.50.2 Methods

56.50.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.50.4 Properties

56.50.5 AttributeinputCubeData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube attribute.
Notes:

This attribute should have this content:

Name:	inputCubeData
Class:	Memoryblock
DisplayName English:	Cube Data
DisplayName German:	Würfeldaten
DisplayName French:	Données du cube
DisplayName Italian:	Dati cubo
DisplayName Spanish:	Datos del cubo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.50.6 AttributeinputCubeDimension as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputCubeDimension
Class:	double
Type:	CIAttributeTypeCount
DisplayName English:	Cube Dimension
DisplayName German:	Würfelmaße
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensión del cubo
DefaultNumber:	2
IdentityNumber:	2
MaxNumber:	128
MinNumber:	2

56.50.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.50.8 inputCubeData as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube Data
Notes:

See AttributeinputCubeData for more details.
(Read and Write property)

Name:	inputCubeData
Class:	Memoryblock (NSData)
DisplayName English:	Cube Data
DisplayName German:	Würfeldaten
DisplayName French:	Données du cube
DisplayName Italian:	Dati cubo
DisplayName Spanish:	Datos del cubo
Type:	

56.50.9 inputCubeDimension as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube Dimension
Notes:

Name:	inputCubeDimension
Class:	double (NSNumber)
DisplayName English:	Cube Dimension
DisplayName German:	Würfelmaße
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensión del cubo
Type:	CIAttributeTypeCount

See AttributeinputCubeDimension for more details.
(Read and Write property)

56.50.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.51 class CIFilterColorCubesMixedWithMaskMBS

56.51.1 class CIFilterColorCubesMixedWithMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Cubes Mixed With Mask filter.
Notes:

Details for this filter:

FilterName:	CIColorCubesMixedWithMask
DisplayName English:	Color Cubes Mixed With Mask
DisplayName German:	Mit Maske gemischte Farbwürfel
DisplayName French:	Cubes de couleur mélangés avec masque
DisplayName Italian:	Cubi di colori misti con maschera
DisplayName Spanish:	Cubos de color mezclados con la máscara

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputMaskImage: Mask Image
- inputCubeDimension: Cube Dimension
- inputCube0Data: Cube 0 Data
- inputCube1Data: Cube 1 Data
- inputColorSpace: Color Space

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.51.2 Methods

56.51.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.51.4 Properties

56.51.5 AttributeinputColorSpace as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputColorSpace
Class:	CGColorSpaceMBS
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorimétrique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.51.6 AttributeinputCube0Data as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputCube0Data
Class:	Memoryblock
DisplayName English:	Cube 0 Data
DisplayName German:	Daten Würfel 0
DisplayName French:	Données du cube 0
DisplayName Italian:	Dati 0 cubo
DisplayName Spanish:	Datos del cubo 0
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.51.7 AttributeinputCube1Data as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputCube1Data
Class:	Memoryblock
DisplayName English:	Cube 1 Data
DisplayName German:	Daten Würfel 1
DisplayName French:	Données du cube 1
DisplayName Italian:	Dati 1 cubo
DisplayName Spanish:	Datos del cubo 1
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.51.8 AttributeinputCubeDimension as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputCubeDimension
Class:	double
Type:	CIAttributeTypeCount
DisplayName English:	Cube Dimension
DisplayName German:	Würfelmaße
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensión del cubo
DefaultNumber:	2
IdentityNumber:	2
MaxNumber:	128
MinNumber:	2

(Read only property)

56.51.9 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.51.10 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cubes Mixed With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.51.11 inputColorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color Space
Notes:

Name:	inputColorSpace
Class:	CGColorSpaceMBS (NSObject)
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorimétrique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
Type:	

See AttributeinputColorSpace for more details.
(Read and Write property)

56.51.12 inputCube0Data as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube 0 Data
Notes:

Name:	inputCube0Data
Class:	Memoryblock (NSData)
DisplayName English:	Cube 0 Data
DisplayName German:	Daten Würfel 0
DisplayName French:	Données du cube 0
DisplayName Italian:	Dati 0 cubo
DisplayName Spanish:	Datos del cubo 0
Type:	

See AttributeinputCube0Data for more details.
(Read and Write property)

56.51.13 inputCube1Data as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube 1 Data
Notes:

Name:	inputCube1Data
Class:	Memoryblock (NSData)
DisplayName English:	Cube 1 Data
DisplayName German:	Daten Würfel 1
DisplayName French:	Données du cube 1
DisplayName Italian:	Dati 1 cubo
DisplayName Spanish:	Datos del cubo 1
Type:	

See AttributeinputCube1Data for more details.
(Read and Write property)

56.51.14 inputCubeDimension as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube Dimension
Notes:

Name:	inputCubeDimension
Class:	double (NSNumber)
DisplayName English:	Cube Dimension
DisplayName German:	Würfelmaße
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensión del cubo
Type:	CIAttributeTypeCount

See AttributeinputCubeDimension for more details.
(Read and Write property)

56.51.15 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.51.16 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

See AttributeinputMaskImage for more details.
(Read and Write property)

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
Type:	CIAttributeTypeImage

56.52 class CIFilterColorCubeWithColorSpaceMBS

56.52.1 class CIFilterColorCubeWithColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Cube with ColorSpace filter.
Notes:

Details for this filter:

FilterName:	CIColorCubeWithColorSpace
DisplayName English:	Color Cube with ColorSpace
DisplayName German:	Farbwürfel mit ColorSpace
DisplayName French:	Cube de couleur avec ColorSpace
DisplayName Italian:	Cubo colore con spazio colore
DisplayName Spanish:	Cubo de color con espacio de color

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCubeDimension: Cube Dimension
- inputCubeData: Cube Data
- inputColorSpace: Color Space

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.52.2 Methods

56.52.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.52.4 Properties

56.52.5 AttributeinputColorSpace as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube with ColorSpace attribute.
Notes:

This attribute should have this content:

Name:	inputColorSpace
Class:	CGColorSpaceMBS
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorimétrique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.52.6 AttributeinputCubeData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube with ColorSpace attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputCubeData
Class:	Memoryblock
DisplayName English:	Cube Data
DisplayName German:	Würfeldaten
DisplayName French:	Données du cube
DisplayName Italian:	Dati cubo
DisplayName Spanish:	Datos del cubo
DefaultNumber:	0
IdentityNumber:	0

56.52.7 AttributeinputCubeDimension as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube with ColorSpace attribute.
Notes:

This attribute should have this content:

Name:	inputCubeDimension
Class:	double
Type:	CIAttributeTypeCount
DisplayName English:	Cube Dimension
DisplayName German:	Würfelmaße
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensión del cubo
DefaultNumber:	2
IdentityNumber:	2
MaxNumber:	128
MinNumber:	2

(Read only property)

56.52.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Cube with ColorSpace attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.52.9 inputColorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color Space
Notes:

Name:	inputColorSpace
Class:	CGColorSpaceMBS (NSObject)
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorimétrique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
Type:	

See AttributeinputColorSpace for more details.
(Read and Write property)

56.52.10 inputCubeData as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube Data
Notes:

See AttributeinputCubeData for more details.
(Read and Write property)

Name:	inputCubeData
Class:	Memoryblock (NSData)
DisplayName English:	Cube Data
DisplayName German:	Würfeldaten
DisplayName French:	Données du cube
DisplayName Italian:	Dati cubo
DisplayName Spanish:	Datos del cubo
Type:	

56.52.11 inputCubeDimension as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cube Dimension
Notes:

Name:	inputCubeDimension
Class:	double (NSNumber)
DisplayName English:	Cube Dimension
DisplayName German:	Würfelmaße
DisplayName French:	Dimension du cube
DisplayName Italian:	Dimensione cubo
DisplayName Spanish:	Dimensión del cubo
Type:	CIAttributeTypeCount

See AttributeinputCubeDimension for more details.
(Read and Write property)

56.52.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.53 class CIFilterColorCurvesMBS

56.53.1 class CIFilterColorCurvesMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Curves filter.
Notes:

Details for this filter:

FilterName:	CIColorCurves
DisplayName English:	Color Curves
DisplayName German:	Farbkurven
DisplayName French:	Courbes de couleur
DisplayName Italian:	Curve colore
DisplayName Spanish:	Curvas de colores

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCurvesData: Curves Data
- inputCurvesDomain: Curves Domain
- inputColorSpace: Color Space

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.53.2 Methods

56.53.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.53.4 Properties

56.53.5 AttributeinputColorSpace as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Curves attribute.
Notes:

This attribute should have this content:

Name:	inputColorSpace
Class:	CGColorSpaceMBS
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorimétrique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.53.6 AttributeinputCurvesData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Curves attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputCurvesData
Class:	Memoryblock
DisplayName English:	Curves Data
DisplayName German:	Kurvendaten
DisplayName French:	Données des courbes
DisplayName Italian:	Dati curve
DisplayName Spanish:	Datos de las curvas
DefaultNumber:	0
IdentityNumber:	0

56.53.7 AttributeinputCurvesDomain as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Curves attribute.
Notes:

This attribute should have this content:

Name:	inputCurvesDomain
Class:	CIVectorMBS
DisplayName English:	Curves Domain
DisplayName German:	Kurven-Domain
DisplayName French:	Domaine des courbes
DisplayName Italian:	Dominio curve
DisplayName Spanish:	Dominio de curvas
DefaultVector:	[0 1]
IdentityVector:	n/a

(Read only property)

56.53.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Curves attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

56.53.9 inputColorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color Space
Notes:

Name:	inputColorSpace
Class:	CGColorSpaceMBS (NSObject)
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorimétrique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
Type:	

See AttributeinputColorSpace for more details.
(Read and Write property)

56.53.10 inputCurvesData as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Curves Data
Notes:

See AttributeinputCurvesData for more details.
(Read and Write property)

Name:	inputCurvesData
Class:	Memoryblock (NSData)
DisplayName English:	Curves Data
DisplayName German:	Kurvendaten
DisplayName French:	Données des courbes
DisplayName Italian:	Dati curve
DisplayName Spanish:	Datos de las curvas
Type:	

56.53.11 inputCurvesDomain as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Curves Domain
Notes:

Name:	inputCurvesDomain
Class:	CIVectorMBS (CIVector)
DisplayName English:	Curves Domain
DisplayName German:	Kurven-Domain
DisplayName French:	Domaine des courbes
DisplayName Italian:	Dominio curve
DisplayName Spanish:	Dominio de curvas
Type:	

See AttributeinputCurvesDomain for more details.
(Read and Write property)

56.53.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.54 class CIFilterColorDodgeBlendModeMBS

56.54.1 class CIFilterColorDodgeBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Dodge Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIColorDodgeBlendMode
DisplayName English:	Color Dodge Blend Mode
DisplayName German:	Mischmethode „Farbig abwedeln“
DisplayName French:	Mode de fusion Densité couleur négative
DisplayName Italian:	Modalità sfumatura colore schermato
DisplayName Spanish:	Modo de mezcla por evasión de color

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.54.2 Methods

56.54.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.54.4 Properties

56.54.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Dodge Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.54.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Dodge Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.54.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.54.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.55 class CIFilterColorInvertMBS

56.55.1 class CIFilterColorInvertMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Invert filter.
Notes:

Details for this filter:

FilterName:	CIColorInvert
DisplayName English:	Color Invert
DisplayName German:	Farbe umkehren
DisplayName French:	Inversion de couleur
DisplayName Italian:	Inversione colore
DisplayName Spanish:	Inversión de color

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.55.2 Methods

56.55.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.55.4 Properties

56.55.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Invert attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.55.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.56 class CIFilterColorMapMBS

56.56.1 class CIFilterColorMapMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Map filter.
Notes:

Details for this filter:

FilterName:	CIColorMap
DisplayName English:	Color Map
DisplayName German:	Farbkarte
DisplayName French:	Carte de couleurs
DisplayName Italian:	Mappa colore
DisplayName Spanish:	Mapa de color

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputGradientImage: Gradient Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.56.2 Methods

56.56.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.56.4 Properties

56.56.5 AttributeinputGradientImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Map attribute.
Notes:

This attribute should have this content:

Name:	inputGradientImage
Class:	CIImageMBS
Type:	CIAttributeTypeGradient
DisplayName English:	Gradient Image
DisplayName German:	Bild für Verlauf
DisplayName French:	Image du dégradé
DisplayName Italian:	Immagine gradiente
DisplayName Spanish:	Imagen degradada
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.56.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Map attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.56.7 inputGradientImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Gradient Image
Notes:

Name:	inputGradientImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Gradient Image
DisplayName German:	Bild für Verlauf
DisplayName French:	Image du dégradé
DisplayName Italian:	Immagine gradiente
DisplayName Spanish:	Imagen degradada
Type:	CIAttributeTypeGradient

See AttributeinputGradientImage for more details.
(Read and Write property)

56.56.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.57 class CIFilterColorMatrixMBS

56.57.1 class CIFilterColorMatrixMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Matrix filter.
Notes:

Details for this filter:

FilterName:	CIColorMatrix
DisplayName English:	Color Matrix
DisplayName German:	Farbmatrix
DisplayName French:	Matrice de couleurs
DisplayName Italian:	Matrice colore
DisplayName Spanish:	Matriz de color

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRVector: Red Vector
- inputGVector: Green Vector
- inputBVector: Blue Vector
- inputAVector: Alpha Vector
- inputBiasVector: Bias Vector

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.57.2 Methods

56.57.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.57.4 Properties

56.57.5 AttributeinputAVector as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes:

This attribute should have this content:

Name:	inputAVector
Class:	CIVectorMBS
DisplayName English:	Alpha Vector
DisplayName German:	Alpha-Vektor
DisplayName French:	Vecteur alpha
DisplayName Italian:	Vettore alfa
DisplayName Spanish:	Vector alfa
DefaultVector:	[0 0 0 1]
IdentityVector:	[0 0 0 1]

(Read only property)

56.57.6 AttributeinputBiasVector as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes:

This attribute should have this content:

Name:	inputBiasVector
Class:	CIVectorMBS
DisplayName English:	Bias Vector
DisplayName German:	Bias-Vektor
DisplayName French:	Vecteur de biais
DisplayName Italian:	Vettore BIAS
DisplayName Spanish:	Vector oblicuo
DefaultVector:	[0 0 0 0]
IdentityVector:	[0 0 0 0]

(Read only property)

56.57.7 AttributeinputBVector as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes:

This attribute should have this content:

Name:	inputBVector
Class:	CIVectorMBS
DisplayName English:	Blue Vector
DisplayName German:	Blau-Vektor
DisplayName French:	Vecteur bleu
DisplayName Italian:	Vettore blu
DisplayName Spanish:	Vector azul
DefaultVector:	[0 0 1 0]
IdentityVector:	[0 0 1 0]

(Read only property)

56.57.8 AttributeinputGVector as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes:

This attribute should have this content:

Name:	inputGVector
Class:	CIVectorMBS
DisplayName English:	Green Vector
DisplayName German:	Grün-Vektor
DisplayName French:	Vecteur vert
DisplayName Italian:	Vettore verde
DisplayName Spanish:	Vector verde
DefaultVector:	[0 1 0 0]
IdentityVector:	[0 1 0 0]

(Read only property)

56.57.9 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.57.10 AttributeinputRVector as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Matrix attribute.
Notes:

This attribute should have this content:

Name:	inputRVector
Class:	CIVectorMBS
DisplayName English:	Red Vector
DisplayName German:	Rot-Vektor
DisplayName French:	Vecteur rouge
DisplayName Italian:	Vettore rosso
DisplayName Spanish:	Vector rojo
DefaultVector:	[1 0 0 0]
IdentityVector:	[1 0 0 0]

(Read only property)

56.57.11 inputAVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Alpha Vector
Notes:

Name:	inputAVector
Class:	CIVectorMBS (CIVector)
DisplayName English:	Alpha Vector
DisplayName German:	Alpha-Vektor
DisplayName French:	Vecteur alpha
DisplayName Italian:	Vettore alfa
DisplayName Spanish:	Vector alfa
Type:	

See AttributeinputAVector for more details.
(Read and Write property)

56.57.12 inputBiasVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias Vector
Notes:

Name:	inputBiasVector
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bias Vector
DisplayName German:	Bias-Vektor
DisplayName French:	Vecteur de biais
DisplayName Italian:	Vettore BIAS
DisplayName Spanish:	Vector oblicuo
Type:	

See AttributeinputBiasVector for more details.
(Read and Write property)

56.57.13 inputBVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Blue Vector
Notes:

Name:	inputBVector
Class:	CIVectorMBS (CIVector)
DisplayName English:	Blue Vector
DisplayName German:	Blau-Vektor
DisplayName French:	Vecteur bleu
DisplayName Italian:	Vettore blu
DisplayName Spanish:	Vector azul
Type:	

See AttributeinputBVector for more details.
(Read and Write property)

56.57.14 inputGVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Green Vector
Notes:

See AttributeinputGVector for more details.
(Read and Write property)

Name:	inputGVector
Class:	CIVectorMBS (CIVector)
DisplayName English:	Green Vector
DisplayName German:	Grün-Vektor
DisplayName French:	Vecteur vert
DisplayName Italian:	Vettore verde
DisplayName Spanish:	Vector verde
Type:	

56.57.15 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.57.16 inputRVector as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Red Vector
Notes:

Name:	inputRVector
Class:	CIVectorMBS (CIVector)
DisplayName English:	Red Vector
DisplayName German:	Rot-Vektor
DisplayName French:	Vecteur rouge
DisplayName Italian:	Vettore rosso
DisplayName Spanish:	Vector rojo
Type:	

See AttributeinputRVector for more details.
(Read and Write property)

56.58 class CIFilterColorMonochromeMBS

56.58.1 class CIFilterColorMonochromeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Monochrome filter.
Notes:

Details for this filter:

FilterName:	CIColorMonochrome
DisplayName English:	Color Monochrome
DisplayName German:	Einfarbig
DisplayName French:	Couleur monochrome
DisplayName Italian:	Colore monocromo
DisplayName Spanish:	Color monocromo

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputColor: Color
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.58.2 Methods

56.58.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.58.4 Properties

56.58.5 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Monochrome attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeOpaqueColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 0.6, Green = 0.45, Blue = 0.3, Alpha = 1
IdentityNumber:	0

(Read only property)

56.58.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Monochrome attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.58.7 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Monochrome attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensität
DisplayName French:	Intensité
DisplayName Italian:	Intensità
DisplayName Spanish:	Intensidad
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.58.8 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeOpaqueColor

See AttributeinputColor for more details.
(Read and Write property)

56.58.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.58.10 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

See AttributeinputIntensity for more details.
(Read and Write property)

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensität
DisplayName French:	Intensité
DisplayName Italian:	Intensità
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

56.59 class CIFilterColorPolynomialMBS

56.59.1 class CIFilterColorPolynomialMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Polynomial filter.
Notes:

Details for this filter:

FilterName:	CIColorPolynomial
DisplayName English:	Color Polynomial
DisplayName German:	Farb-Polynom
DisplayName French:	Fonction polynomiale de la couleur
DisplayName Italian:	Polinomio cromatico
DisplayName Spanish:	Polinomio cromático

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRedCoefficients: Red Coefficients
- inputGreenCoefficients: Green Coefficients
- inputBlueCoefficients: Blue Coefficients
- inputAlphaCoefficients: Alpha Coefficients

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.59.2 Methods

56.59.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.59.4 Properties

56.59.5 AttributeinputAlphaCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Polynomial attribute.
Notes:

This attribute should have this content:

Name:	inputAlphaCoefficients
Class:	CIVectorMBS
DisplayName English:	Alpha Coefficients
DisplayName German:	Alpha-Koeffizienten
DisplayName French:	Coefficients Alpha
DisplayName Italian:	Coefficienti alfa
DisplayName Spanish:	Coeficientes alfa
DefaultVector:	[0 1 0 0]
IdentityVector:	[0 1 0 0]

(Read only property)

56.59.6 AttributeinputBlueCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Polynomial attribute.
Notes:

This attribute should have this content:

Name:	inputBlueCoefficients
Class:	CIVectorMBS
DisplayName English:	Blue Coefficients
DisplayName German:	Blau-Koeffizienten
DisplayName French:	Coefficients Bleu
DisplayName Italian:	Coefficienti colore blu
DisplayName Spanish:	Coeficientes de azul
DefaultVector:	[0 1 0 0]
IdentityVector:	[0 1 0 0]

(Read only property)

56.59.7 AttributeinputGreenCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Polynomial attribute.
Notes:

This attribute should have this content:

Name:	inputGreenCoefficients
Class:	CIVectorMBS
DisplayName English:	Green Coefficients
DisplayName German:	Grün-Koeffizienten
DisplayName French:	Coefficients Vert
DisplayName Italian:	Coefficienti colore verde
DisplayName Spanish:	Coeficientes de verde
DefaultVector:	[0 1 0 0]
IdentityVector:	[0 1 0 0]

(Read only property)

56.59.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Polynomial attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.59.9 AttributeinputRedCoefficients as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Polynomial attribute.
Notes:

This attribute should have this content:

Name:	inputRedCoefficients
Class:	CIVectorMBS
DisplayName English:	Red Coefficients
DisplayName German:	Rot-Koeffizienten
DisplayName French:	Coefficients Rouge
DisplayName Italian:	Coefficienti colore rosso
DisplayName Spanish:	Coeficientes de rojo
DefaultVector:	[0 1 0 0]
IdentityVector:	[0 1 0 0]

(Read only property)

56.59.10 inputAlphaCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Alpha Coefficients
Notes:

Name:	inputAlphaCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Alpha Coefficients
DisplayName German:	Alpha-Koeffizienten
DisplayName French:	Coefficients Alpha
DisplayName Italian:	Coefficienti alfa
DisplayName Spanish:	Coeficientes alfa
Type:	

See AttributeinputAlphaCoefficients for more details.
(Read and Write property)

56.59.11 inputBlueCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Blue Coefficients
Notes:

Name:	inputBlueCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Blue Coefficients
DisplayName German:	Blau-Koeffizienten
DisplayName French:	Coefficients Bleu
DisplayName Italian:	Coefficienti colore blu
DisplayName Spanish:	Coeficientes de azul
Type:	

See AttributeinputBlueCoefficients for more details.
(Read and Write property)

56.59.12 inputGreenCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Green Coefficients
Notes:

See AttributeinputGreenCoefficients for more details.
(Read and Write property)

Name:	inputGreenCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Green Coefficients
DisplayName German:	Grün-Koeffizienten
DisplayName French:	Coefficients Vert
DisplayName Italian:	Coefficienti colore verde
DisplayName Spanish:	Coeficientes de verde
Type:	

56.59.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.59.14 inputRedCoefficients as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Red Coefficients
Notes:

Name:	inputRedCoefficients
Class:	CIVectorMBS (CIVector)
DisplayName English:	Red Coefficients
DisplayName German:	Rot-Koeffizienten
DisplayName French:	Coefficients Rouge
DisplayName Italian:	Coefficienti colore rosso
DisplayName Spanish:	Coeficientes de rojo
Type:	

See AttributeinputRedCoefficients for more details.
(Read and Write property)

56.60 class CIFilterColorPosterizeMBS

56.60.1 class CIFilterColorPosterizeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Color Posterize filter.
Notes:

Details for this filter:

FilterName:	CIColorPosterize
DisplayName English:	Color Posterize
DisplayName German:	Farbe auflösen
DisplayName French:	Postériser la couleur
DisplayName Italian:	Posterizzazione colore
DisplayName Spanish:	Posterización de color

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputLevels: Levels

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.60.2 Methods

56.60.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.60.4 Properties

56.60.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Posterize attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.60.6 AttributeinputLevels as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Color Posterize attribute.
Notes:

This attribute should have this content:

Name:	inputLevels
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Levels
DisplayName German:	Werte
DisplayName French:	Niveaux
DisplayName Italian:	Livelli
DisplayName Spanish:	Niveles
DefaultNumber:	6
IdentityNumber:	300
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	30
SliderMinNumber:	2

(Read only property)

56.60.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.60.8 inputLevels as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Levels
Notes:

Name:	inputLevels
Class:	double (NSNumber)
DisplayName English:	Levels
DisplayName German:	Werte
DisplayName French:	Niveaux
DisplayName Italian:	Livelli
DisplayName Spanish:	Niveles
Type:	CIAttributeTypeScalar

See AttributeinputLevels for more details.
(Read and Write property)

56.61 class CIFilterColumnAverageMBS

56.61.1 class CIFilterColumnAverageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Column Average filter.
Notes:

Details for this filter:

FilterName:	CIColumnAverage
DisplayName English:	Column Average
DisplayName German:	Spaltendurchschnitt
DisplayName French:	Moyenne des colonnes
DisplayName Italian:	Media colonna
DisplayName Spanish:	Media de la columna

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.61.2 Methods

56.61.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.61.4 Properties

56.61.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Column Average attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 640 80]
IdentityVector:	n/a

(Read only property)

56.61.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Column Average attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.61.7 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.61.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.62 class CIFilterComicEffectMBS

56.62.1 class CIFilterComicEffectMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Comic Effect filter.
Notes:

Details for this filter:

FilterName:	CIComicEffect
DisplayName English:	Comic Effect
DisplayName German:	Comic-Effekt
DisplayName French:	Effet comique
DisplayName Italian:	Effetto fumetto
DisplayName Spanish:	Efecto cómico

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.62.2 Methods

56.62.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.62.4 Properties

56.62.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Comic Effect attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.62.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.63 class CIFilterConstantColorGeneratorMBS

56.63.1 class CIFilterConstantColorGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Constant Color filter.
Notes:

Details for this filter:

FilterName:	CIConstantColorGenerator
DisplayName English:	Constant Color
DisplayName German:	Farbfläche
DisplayName French:	Couleur constante
DisplayName Italian:	Colore costante
DisplayName Spanish:	Color constante

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputColor: Color

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.63.2 Methods

56.63.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.63.4 Properties

56.63.5 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Constant Color attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 0, Blue = 0, Alpha = 1
IdentityNumber:	0

(Read only property)

56.63.6 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

See AttributeinputColor for more details.
(Read and Write property)

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

56.64 class CIFilterConvolution3X3MBS

56.64.1 class CIFilterConvolution3X3MBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage 3 by 3 convolution filter.
Notes:

Details for this filter:

FilterName:	CIConvolution3X3
DisplayName English:	3 by 3 convolution
DisplayName German:	3 x 3-Faltung
DisplayName French:	Convolution 3 par 3
DisplayName Italian:	Convoluzione 3 per 3
DisplayName Spanish:	Convolución de 3x3

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputWeights: Weights
- inputBias: Bias

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.64.2 Methods

56.64.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.64.4 Properties

56.64.5 AttributeinputBias as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 3 by 3 convolution attribute.
Notes:

This attribute should have this content:

Name:	inputBias
Class:	double
DisplayName:	Bias
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.64.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 3 by 3 convolution attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

56.64.7 AttributeinputWeights as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 3 by 3 convolution attribute.
Notes:

This attribute should have this content:

Name:	inputWeights
Class:	CIVectorMBS
DisplayName:	Weights
DefaultVector:	[0 0 0 0 1 0 0 0 0]
IdentityVector:	[0 0 0 0 1 0 0 0 0]

(Read only property)

56.64.8 inputBias as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

See AttributeinputBias for more details.
(Read and Write property)

56.64.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.64.10 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights
Type:	

See AttributeinputWeights for more details.
(Read and Write property)

56.65 class CIFilterConvolution5X5MBS

56.65.1 class CIFilterConvolution5X5MBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage 5 by 5 convolution filter.
Notes:

Details for this filter:

FilterName:	CIConvolution5X5
DisplayName English:	5 by 5 convolution
DisplayName German:	5 x 5-Faltung
DisplayName French:	Convolution 5 par 5
DisplayName Italian:	Convoluzione 5 per 5
DisplayName Spanish:	Convolución de 5x5

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputWeights: Weights
- inputBias: Bias

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.65.2 Methods

56.65.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.65.4 Properties

56.65.5 AttributeinputBias as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 5 by 5 convolution attribute.
Notes:

This attribute should have this content:

Name:	inputBias
Class:	double
DisplayName:	Bias
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.65.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 5 by 5 convolution attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

56.65.7 AttributeinputWeights as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 5 by 5 convolution attribute.
Notes:

This attribute should have this content:

Name:	inputWeights
Class:	CIVectorMBS
DisplayName:	Weights
DefaultVector:	[0 0 0 0 0 0 0 0 0 0 0 0 1 0 0 0 0 0 0 0 0 0 0 0 0]
IdentityVector:	[0 0 0 0 0 0 0 0 0 0 0 0 1 0 0 0 0 0 0 0 0 0 0 0 0]

(Read only property)

56.65.8 inputBias as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

See AttributeinputBias for more details.
(Read and Write property)

56.65.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.65.10 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights
Type:	

See AttributeinputWeights for more details.
(Read and Write property)

56.66 class CIFilterConvolution7X7MBS

56.66.1 class CIFilterConvolution7X7MBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage 7 by 7 convolution filter.
Notes:

Details for this filter:

FilterName:	CIConvolution7X7
DisplayName English:	7 by 7 convolution
DisplayName German:	7 x 7-Faltung
DisplayName French:	Convolution 7 par 7
DisplayName Italian:	Convoluzione 7 per 7
DisplayName Spanish:	Convolución de 7x7

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputWeights: Weights
- inputBias: Bias

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.66.2 Methods

56.66.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.66.4 Properties

56.66.5 AttributeinputBias as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 7 by 7 convolution attribute.
Notes:

This attribute should have this content:

Name:	inputBias
Class:	double
DisplayName:	Bias
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.66.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 7 by 7 convolution attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

56.66.7 AttributeinputWeights as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the 7 by 7 convolution attribute.
Notes:

This attribute should have this content:

Name:	inputWeights
Class:	CIVectorMBS
DisplayName:	Weights
DefaultVector:	[0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0]
IdentityVector:	[0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0]

(Read only property)

56.66.8 inputBias as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

See AttributeinputBias for more details.
(Read and Write property)

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	

56.66.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.66.10 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights
Type:	

See AttributeinputWeights for more details.
(Read and Write property)

56.67 class CIFilterConvolution9HorizontalMBS

56.67.1 class CIFilterConvolution9HorizontalMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Horizontal 9 Convolution filter.
Notes:

Details for this filter:

FilterName:	CIConvolution9Horizontal
DisplayName English:	Horizontal 9 Convolution
DisplayName German:	Horizontale 9-Faltung
DisplayName French:	Convolution 9 horizontale
DisplayName Italian:	Convoluzione orizzontale 9
DisplayName Spanish:	Convolución horizontal con 9 valores

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputWeights: Weights
- inputBias: Bias

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.67.2 Methods

56.67.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.67.4 Properties

56.67.5 AttributeinputBias as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Horizontal 9 Convolution attribute.
Notes:

This attribute should have this content:

Name:	inputBias
Class:	double
DisplayName:	Bias
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.67.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Horizontal 9 Convolution attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

56.67.7 AttributeinputWeights as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Horizontal 9 Convolution attribute.
Notes:

This attribute should have this content:

Name:	inputWeights
Class:	CIVectorMBS
DisplayName:	Weights
DefaultVector:	[0 0 0 0 1 0 0 0 0]
IdentityVector:	[0 0 0 0 1 0 0 0 0]

(Read only property)

56.67.8 inputBias as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

See AttributeinputBias for more details.
(Read and Write property)

56.67.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.67.10 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights
Type:	

See AttributeinputWeights for more details.
(Read and Write property)

56.68 class CIFilterConvolution9VerticalMBS

56.68.1 class CIFilterConvolution9VerticalMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Vertical 9 Convolution filter.
Notes:

Details for this filter:

FilterName:	CIConvolution9Vertical
DisplayName English:	Vertical 9 Convolution
DisplayName German:	Vertikale 9-Faltung
DisplayName French:	Convolution 9 verticale
DisplayName Italian:	Convoluzione verticale 9
DisplayName Spanish:	Convolución vertical con 9 valores

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputWeights: Weights
- inputBias: Bias

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.68.2 Methods

56.68.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.68.4 Properties

56.68.5 AttributeinputBias as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vertical 9 Convolution attribute.
Notes:

This attribute should have this content:

Name:	inputBias
Class:	double
DisplayName:	Bias
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.68.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vertical 9 Convolution attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

56.68.7 AttributeinputWeights as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vertical 9 Convolution attribute.
Notes:

This attribute should have this content:

Name:	inputWeights
Class:	CIVectorMBS
DisplayName:	Weights
DefaultVector:	[0 0 0 0 1 0 0 0 0]
IdentityVector:	[0 0 0 0 1 0 0 0 0]

(Read only property)

56.68.8 inputBias as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

See AttributeinputBias for more details.
(Read and Write property)

56.68.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.68.10 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights
Type:	

See AttributeinputWeights for more details.
(Read and Write property)

56.69 class CIFilterCopyMachineTransitionMBS

56.69.1 class CIFilterCopyMachineTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Copy Machine filter.
Notes:

Details for this filter:

FilterName:	CICopyMachineTransition
DisplayName English:	Copy Machine
DisplayName German:	Kopieren
DisplayName French:	Photocopieur
DisplayName Italian:	Fotocopiatrice
DisplayName Spanish:	Copiar máquina

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputExtent: Extent
- inputColor: Color
- inputTime: Time
- inputAngle: Angle
- inputWidth: Width
- inputOpacity: Opacity

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.69.2 Methods

56.69.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.69.4 Properties

56.69.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	0

(Read only property)

56.69.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeOpaqueColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 0.6, Green = 1, Blue = 0.8, Alpha = 1
IdentityNumber:	0

(Read only property)

56.69.7 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 300 300]
IdentityVector:	n/a

(Read only property)

56.69.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.69.9 AttributeinputOpacity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes:

This attribute should have this content:

Name:	inputOpacity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Opacity
DisplayName German:	Deckkraft
DisplayName French:	Opacité
DisplayName Italian:	Opacità
DisplayName Spanish:	Opacidad
DefaultNumber:	1.3
IdentityNumber:	1.3
SliderMaxNumber:	3
SliderMinNumber:	0

(Read only property)

56.69.10 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes:

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.69.11 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes:

This attribute should have this content:

(Read only property)

56.69.12 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Copy Machine attribute.
Notes:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	200
IdentityNumber:	200
MaxNumber:	0
MinNumber:	0.1
SliderMaxNumber:	500
SliderMinNumber:	0.1

(Read only property)

56.69.13 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

See AttributeinputAngle for more details.
(Read and Write property)

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

56.69.14 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeOpaqueColor

See AttributeinputColor for more details.
(Read and Write property)

56.69.15 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

See AttributeinputExtent for more details.
(Read and Write property)

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

56.69.16 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.69.17 inputOpacity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Opacity
Notes:

Name:	inputOpacity
Class:	double (NSNumber)
DisplayName English:	Opacity
DisplayName German:	Deckkraft
DisplayName French:	Opacité
DisplayName Italian:	Opacità
DisplayName Spanish:	Opacidad
Type:	CIAttributeTypeScalar

See AttributeinputOpacity for more details.
(Read and Write property)

56.69.18 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

56.69.19 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

56.69.20 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

56.70 class CIFilterCropMBS

56.70.1 class CIFilterCropMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Crop filter.
Notes:

Details for this filter:

FilterName:	CICrop
DisplayName English:	Crop
DisplayName German:	Freistellen
DisplayName French:	Recadrer
DisplayName Italian:	Ritaglia
DisplayName Spanish:	Recortar

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRectangle: Rectangle

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.70.2 Methods

56.70.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.70.4 Properties

56.70.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Crop attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.70.6 AttributeinputRectangle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Crop attribute.
Notes:

This attribute should have this content:

Name:	inputRectangle
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Rectangle
DisplayName German:	Rechteck
DisplayName French:	Rectangle
DisplayName Italian:	Rettangolo
DisplayName Spanish:	Rectángulo
DefaultVector:	[0 0 300 300]
IdentityVector:	[-1.70141e+38 -1.70141e+38 3.40282e+38 3.40282e+38]

(Read only property)

56.70.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.70.8 inputRectangle as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Rectangle
Notes:

See AttributeinputRectangle for more details.
(Read and Write property)

Name:	inputRectangle
Class:	CIVectorMBS (CIVector)
DisplayName English:	Rectangle
DisplayName German:	Rechteck
DisplayName French:	Rectangle
DisplayName Italian:	Rettangolo
DisplayName Spanish:	Rectángulo
Type:	CIAttributeTypeRectangle

56.71 class CIFilterCrystallizeMBS

56.71.1 class CIFilterCrystallizeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Crystallize filter.
Notes:

Details for this filter:

FilterName:	CICrystallize
DisplayName English:	Crystallize
DisplayName German:	Kristallisieren
DisplayName French:	Cristalliser
DisplayName Italian:	Cristallizzazione
DisplayName Spanish:	Cristalización

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputCenter: Center

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.71.2 Methods

56.71.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.71.4 Properties

56.71.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Crystallize attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.71.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Crystallize attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.71.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Crystallize attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	20
IdentityNumber:	1
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

(Read only property)

56.71.8 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.71.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.71.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

56.72 class CIFilterDarkenBlendModeMBS

56.72.1 class CIFilterDarkenBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Darken Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIDarkenBlendMode
DisplayName English:	Darken Blend Mode
DisplayName German:	Mischmethode „Abdunkeln“
DisplayName French:	Mode de fusion Assombrir
DisplayName Italian:	Modalità sfumatura scura
DisplayName Spanish:	Oscurecer modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.72.2 Methods

56.72.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.72.4 Properties

56.72.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Darken Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.72.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Darken Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.72.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.72.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.73 class CIFilterDepthBlurEffectMBS

56.73.1 class CIFilterDepthBlurEffectMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Depth Blur Effect filter.
Notes:

Details for this filter:

FilterName:	CIDepthBlurEffect
DisplayName English:	Depth Blur Effect
DisplayName German:	Tiefenweichzeichneneffekt
DisplayName French:	Effet de flou de profondeur
DisplayName Italian:	Effetto sfocatura profondità
DisplayName Spanish:	Efecto de profundidad desenfocado

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputDisparityImage: Disparity Image
- inputMatteImage: Matte Image
- inputAperture: Aperture
- inputLeftEyePositions: Left Eye Positions
- inputRightEyePositions: Right Eye Positions
- inputChinPositions: Chin Positions
- inputNosePositions: Nose Positions
- inputFocusRect: Focus Rectangle

- inputLumaNoiseScale: Luma Noise Scale
- inputScaleFactor: Scale Factor
- inputCalibrationData: Calibration Data
- inputAuxDataMetadata: Aux Data Metadata
- inputShape: Shape

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.73.2 Methods

56.73.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.73.4 Properties

56.73.5 AttributeinputAperture as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

(Read only property)

56.73.6 AttributeinputAuxDataMetadata as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputAperture
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Aperture
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	22
MinNumber:	0
SliderMaxNumber:	22
SliderMinNumber:	1

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputAuxDataMetadata
Class:	
DisplayName English:	Aux Data Metadata
DisplayName German:	Hilfsdaten – Metadaten
DisplayName French:	Métadonnées des données auxiliaires
DisplayName Italian:	Metadati dati canale
DisplayName Spanish:	Metadatos auxiliares
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.73.7 AttributeinputCalibrationData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputCalibrationData
Class:	Variant
DisplayName English:	Calibration Data
DisplayName German:	Kalibrierungsdaten
DisplayName French:	Données d'étalonnage
DisplayName Italian:	Dati di calibrazione
DisplayName Spanish:	Datos de calibración

56.73.8 AttributeinputChinPositions as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputChinPositions
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Chin Positions
DisplayName German:	Kinnpositionen
DisplayName French:	Positions du menton
DisplayName Italian:	Posizioni mento
DisplayName Spanish:	Posiciones de barbilla
DefaultVector:	[-1 -1]
IdentityVector:	n/a

(Read only property)

56.73.9 AttributeinputDisparityImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputDisparityImage
Class:	CIImageMBS
DisplayName English:	Disparity Image
DisplayName German:	Abweichungsbild
DisplayName French:	Image de disparité
DisplayName Italian:	Immagine di disparità
DisplayName Spanish:	Imagen de disparidad
DefaultNumber:	0
IdentityNumber:	0

56.73.10 AttributeinputFocusRect as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputFocusRect
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Focus Rectangle
DisplayName German:	Fokusrechteck
DisplayName French:	Rectangle de mise au point
DisplayName Italian:	Rettangolo di messa a fuoco
DisplayName Spanish:	Rectángulo focal
DefaultVector:	n/a
IdentityVector:	[-1.70141e+38 -1.70141e+38 3.40282e+38 3.40282e+38]

(Read only property)

56.73.11 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

56.73.12 AttributeinputLeftEyePositions as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputLeftEyePositions
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Left Eye Positions
DisplayName German:	Positionen der linken Augen
DisplayName French:	Positions de l'œil gauche
DisplayName Italian:	Posizioni occhio sinistro
DisplayName Spanish:	Posiciones de ojo izquierdo
DefaultVector:	[-1 -1]
IdentityVector:	n/a

(Read only property)

56.73.13 AttributeinputLumaNoiseScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputLumaNoiseScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Luma Noise Scale
DisplayName German:	Luma-Rauschen-Skalierung
DisplayName French:	Échelle de bruit de luminance
DisplayName Italian:	Scala rumore di luminanza
DisplayName Spanish:	Escala de ruido de luminancia
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	0.1
MinNumber:	0
SliderMaxNumber:	0.1
SliderMinNumber:	0

56.73.14 AttributeinputMatteImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputMatteImage
Class:	CIImageMBS
DisplayName English:	Matte Image
DisplayName German:	Bild mit Maske
DisplayName French:	Image de cache
DisplayName Italian:	Immagine opaca
DisplayName Spanish:	Imagen mate
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.73.15 AttributeinputNosePositions as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputNosePositions
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Nose Positions
DisplayName German:	Nasenpositionen
DisplayName French:	Positions du nez
DisplayName Italian:	Posizioni naso
DisplayName Spanish:	Posiciones de nariz
DefaultVector:	[-1 -1]
IdentityVector:	n/a

(Read only property)

56.73.16 AttributeinputRightEyePositions as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputRightEyePositions
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Right Eye Positions
DisplayName German:	Positionen der rechten Augen
DisplayName French:	Positions de l'œil droit
DisplayName Italian:	Posizioni occhio destro
DisplayName Spanish:	Posiciones de ojo derecho
DefaultVector:	[-1 -1]
IdentityVector:	n/a

(Read only property)

56.73.17 AttributeinputScaleFactor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputScaleFactor
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d'échelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.73.18 AttributeinputShape as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputShape
Class:	String
DisplayName:	Shape
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.73.19 inputAperture as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Aperture
Notes:

Name:	inputAperture
Class:	double (NSNumber)
DisplayName English:	Aperture
DisplayName German:	Aperture
DisplayName French:	Aperture
DisplayName Italian:	Aperture
DisplayName Spanish:	Aperture
Type:	CIAttributeTypeScalar

See AttributeinputAperture for more details.
(Read and Write property)

56.73.20 inputAuxDataMetadata as CGImageMetadataMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Aux Data Metadata
Notes:

Name:	inputAuxDataMetadata
Class:	(CGImageMetadataRef)
DisplayName English:	Aux Data Metadata
DisplayName German:	Hilfsdaten – Metadaten
DisplayName French:	Métadonnées des données auxiliaires
DisplayName Italian:	Metadati dati canale
DisplayName Spanish:	Metadatos auxiliares
Type:	

See AttributeinputAuxDataMetadata for more details.
(Read and Write property)

56.73.21 inputCalibrationData as Variant

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Calibration Data
Notes:

Name:	inputCalibrationData
Class:	Variant (AVCameraCalibrationData)
DisplayName English:	Calibration Data
DisplayName German:	Kalibrierungsdaten
DisplayName French:	Données d'étalonnage
DisplayName Italian:	Dati di calibrazione
DisplayName Spanish:	Datos de calibración
Type:	

See AttributeinputCalibrationData for more details.
(Read and Write property)

56.73.22 inputChinPositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Chin Positions
Notes:

Name:	inputChinPositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Chin Positions
DisplayName German:	Kinnpositionen
DisplayName French:	Positions du menton
DisplayName Italian:	Posizioni mento
DisplayName Spanish:	Posiciones de barbilla
Type:	CIAttributeTypePosition

See AttributeinputChinPositions for more details.
(Read and Write property)

56.73.23 inputDisparityImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Disparity Image
Notes:

See AttributeinputDisparityImage for more details.
(Read and Write property)

Name:	inputDisparityImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Disparity Image
DisplayName German:	Abweichungsbild
DisplayName French:	Image de disparité
DisplayName Italian:	Immagine di disparità
DisplayName Spanish:	Imagen de disparidad
Type:	

56.73.24 inputFocusRect as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Focus Rectangle
Notes:

Name:	inputFocusRect
Class:	CIVectorMBS (CIVector)
DisplayName English:	Focus Rectangle
DisplayName German:	Fokusrechteck
DisplayName French:	Rectangle de mise au point
DisplayName Italian:	Rettangolo di messa a fuoco
DisplayName Spanish:	Rectángulo focal
Type:	CIAttributeTypeRectangle

See AttributeinputFocusRect for more details.
(Read and Write property)

56.73.25 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.73.26 inputLeftEyePositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Left Eye Positions
Notes:

Name:	inputLeftEyePositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Left Eye Positions
DisplayName German:	Positionen der linken Augen
DisplayName French:	Positions de l'œil gauche
DisplayName Italian:	Posizioni occhio sinistro
DisplayName Spanish:	Posiciones de ojo izquierdo
Type:	CIAttributeTypePosition

See AttributeinputLeftEyePositions for more details.
(Read and Write property)

56.73.27 inputLumaNoiseScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Luma Noise Scale
Notes:

Name:	inputLumaNoiseScale
Class:	double (NSNumber)
DisplayName English:	Luma Noise Scale
DisplayName German:	Luma-Rauschen-Skalierung
DisplayName French:	Échelle de bruit de luminance
DisplayName Italian:	Scala rumore di luminanza
DisplayName Spanish:	Escala de ruido de luminancia
Type:	CIAttributeTypeScalar

See AttributeinputLumaNoiseScale for more details.
(Read and Write property)

56.73.28 inputMatteImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Matte Image
Notes:

Name:	inputMatteImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Matte Image
DisplayName German:	Bild mit Maske
DisplayName French:	Image de cache
DisplayName Italian:	Immagine opaca
DisplayName Spanish:	Imagen mate
Type:	

See AttributeinputMatteImage for more details.
(Read and Write property)

56.73.29 inputNosePositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Nose Positions
Notes:

Name:	inputNosePositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Nose Positions
DisplayName German:	Nasenpositionen
DisplayName French:	Positions du nez
DisplayName Italian:	Posizioni naso
DisplayName Spanish:	Posiciones de nariz
Type:	CIAttributeTypePosition

See AttributeinputNosePositions for more details.
(Read and Write property)

56.73.30 inputRightEyePositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Right Eye Positions
Notes:

Name:	inputRightEyePositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Right Eye Positions
DisplayName German:	Positionen der rechten Augen
DisplayName French:	Positions de l'œil droit
DisplayName Italian:	Posizioni occhio destro
DisplayName Spanish:	Posiciones de ojo derecho
Type:	CIAttributeTypePosition

See AttributeinputRightEyePositions for more details.
(Read and Write property)

56.73.31 inputScaleFactor as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale Factor
Notes:

Name:	inputScaleFactor
Class:	double (NSNumber)
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d'échelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
Type:	CIAttributeTypeScalar

See AttributeinputScaleFactor for more details.
(Read and Write property)

56.73.32 inputShape as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shape
Notes:

See AttributeinputShape for more details.
(Read and Write property)

Name:	inputShape
Class:	String (NSString)
DisplayName English:	Shape
DisplayName German:	Shape
DisplayName French:	Shape
DisplayName Italian:	Shape
DisplayName Spanish:	Shape
Type:	

56.74 class CIFilterDepthOfFieldMBS

56.74.1 class CIFilterDepthOfFieldMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Depth of Field filter.
Notes:

Details for this filter:

FilterName:	CIDepthOfField
DisplayName English:	Depth of Field
DisplayName German:	Schärfentiefe
DisplayName French:	Profondeur de champ
DisplayName Italian:	Profondità di campo
DisplayName Spanish:	Profundidad de campo

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputPoint0: Point 0
- inputPoint1: Point 1
- inputSaturation: Saturation
- inputUnsharpMaskRadius: Unsharp Mask Radius
- inputUnsharpMaskIntensity: Unsharp Mask Intensity
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.74.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

56.74.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

56.74.4 Methods

56.74.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.74.6 Properties

56.74.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

(Read only property)

56.74.8 AttributeinputPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

This attribute should have this content:

Name:	inputPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point 0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
DefaultVector:	[0 300]
IdentityVector:	n/a

(Read only property)

56.74.9 AttributeinputPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

(Read only property)

56.74.10 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
DefaultVector:	[300 300]
IdentityVector:	n/a

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	6
IdentityNumber:	0
SliderMaxNumber:	30
SliderMinNumber:	0

(Read only property)

56.74.11 AttributeinputSaturation as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputSaturation
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Saturation
DisplayName German:	Sättigung
DisplayName French:	Saturation
DisplayName Italian:	Saturazione
DisplayName Spanish:	Saturación
DefaultNumber:	1.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

56.74.12 AttributeinputUnsharpMaskIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

Name:	inputUnsharpMaskIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Unsharp Mask Intensity
DisplayName German:	Intensität von „Unscharf maskieren“
DisplayName French:	Intensité du masque flou
DisplayName Italian:	Intensità maschera di contrasto
DisplayName Spanish:	Intensidad de la máscara de desenfoque
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

56.74.13 AttributeinputUnsharpMaskRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

Name:	inputUnsharpMaskRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Unsharp Mask Radius
DisplayName German:	Radius von „Unscharf maskieren“
DisplayName French:	Rayon du masque flou
DisplayName Italian:	Raggio maschera di contrasto
DisplayName Spanish:	Radio de la máscara de desenfoque
DefaultNumber:	2.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

56.74.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.74.15 inputPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 0
Notes:

Name:	inputPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point 0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
Type:	CIAttributeTypePosition

See AttributeinputPoint0 for more details.
(Read and Write property)

56.74.16 inputPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 1
Notes:

Name:	inputPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
Type:	CIAttributeTypePosition

See AttributeinputPoint1 for more details.
(Read and Write property)

56.74.17 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

56.74.18 inputSaturation as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Saturation
Notes:

Name:	inputSaturation
Class:	double (NSNumber)
DisplayName English:	Saturation
DisplayName German:	Sättigung
DisplayName French:	Saturation
DisplayName Italian:	Saturazione
DisplayName Spanish:	Saturación
Type:	CIAttributeTypeScalar

See AttributeinputSaturation for more details.
(Read and Write property)

56.74.19 inputUnsharpMaskIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Unsharp Mask Intensity
Notes:

Name:	inputUnsharpMaskIntensity
Class:	double (NSNumber)
DisplayName English:	Unsharp Mask Intensity
DisplayName German:	Intensität von „Unscharf maskieren“
DisplayName French:	Intensité du masque flou
DisplayName Italian:	Intensità maschera di contrasto
DisplayName Spanish:	Intensidad de la máscara de desenfoque
Type:	CIAttributeTypeScalar

See AttributeinputUnsharpMaskIntensity for more details.
(Read and Write property)

56.74.20 inputUnsharpMaskRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Unsharp Mask Radius
Notes:

Name:	inputUnsharpMaskRadius
Class:	double (NSNumber)
DisplayName English:	Unsharp Mask Radius
DisplayName German:	Radius von „Unscharf maskieren“
DisplayName French:	Rayon du masque flou
DisplayName Italian:	Raggio maschera di contrasto
DisplayName Spanish:	Radio de la máscara de desenfoque
Type:	CIAttributeTypeScalar

See AttributeinputUnsharpMaskRadius for more details.
(Read and Write property)

56.75 class CIFilterDepthToDisparityMBS

56.75.1 class CIFilterDepthToDisparityMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Depth To Disparity filter.
Notes:

Details for this filter:

FilterName:	CIDepthToDisparity
DisplayName English:	Depth To Disparity
DisplayName German:	Tiefe zu Abweichung
DisplayName French:	Profondeur en disparité
DisplayName Italian:	Da profondità a disparità
DisplayName Spanish:	De profundidad a disparidad

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.75.2 Methods

56.75.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.75.4 Properties

56.75.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth To Disparity attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.75.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.76 class CIFilterDifferenceBlendModeMBS

56.76.1 class CIFilterDifferenceBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Difference Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIDifferenceBlendMode
DisplayName English:	Difference Blend Mode
DisplayName German:	Mischmethode „Differenz“
DisplayName French:	Mode de fusion Différence
DisplayName Italian:	Modalità sfumatura differenza
DisplayName Spanish:	Diferenciar modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.76.2 Methods

56.76.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.76.4 Properties

56.76.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Difference Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.76.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Difference Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.76.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.76.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.77 class CIFilterDiscBlurMBS

56.77.1 class CIFilterDiscBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Disc Blur filter.
Notes:

Details for this filter:

FilterName:	CIDiscBlur
DisplayName English:	Disc Blur
DisplayName German:	Kreisförmige Unschärfe
DisplayName French:	Flou (Disc Blur)
DisplayName Italian:	Effetto disco
DisplayName Spanish:	Disco difuminado

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.77.2 Methods

56.77.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.77.4 Properties

56.77.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disc Blur attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.77.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disc Blur attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	8
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

(Read only property)

56.77.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.77.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

(Read and Write property)

56.78 class CIFilterDisintegrateWithMaskTransitionMBS

56.78.1 class CIFilterDisintegrateWithMaskTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Disintegrate With Mask filter.
Notes:

Details for this filter:

FilterName:	CIDisintegrateWithMaskTransition
DisplayName English:	Disintegrate With Mask
DisplayName German:	Übergang mit Maske
DisplayName French:	Désintégrer avec masque
DisplayName Italian:	Disintegra con maschera
DisplayName Spanish:	Desintegrar con máscara

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputMaskImage: Mask Image
- inputTime: Time
- inputShadowRadius: Shadow Radius
- inputShadowDensity: Shadow Density
- inputShadowOffset: Shadow Offset

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.78.2 Methods

56.78.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.78.4 Properties

56.78.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.78.6 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.78.7 AttributeinputShadowDensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputShadowDensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Shadow Density
DisplayName German:	Schattendichte
DisplayName French:	Densité de l'ombre
DisplayName Italian:	Densità ombra
DisplayName Spanish:	Densidad del sombreado

SliderMinNumber:	0

(Read only property)

56.78.8 AttributeinputShadowOffset as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputShadowOffset
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Shadow Offset
DisplayName German:	Schattenabstand
DisplayName French:	Décalage de l'ombre
DisplayName Italian:	Offset ombra
DisplayName Spanish:	Proyección del sombreado
DefaultVector:	[0 -10]
IdentityVector:	[0 0]

(Read only property)

56.78.9 AttributeinputShadowRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputShadowRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Shadow Radius
DisplayName German:	Schattenradius
DisplayName French:	Rayon de l'ombre
DisplayName Italian:	Raggio dell'ombra
DisplayName Spanish:	Radio del sombreado
DefaultNumber:	8
IdentityNumber:	0
SliderMaxNumber:	50
SliderMinNumber:	0

(Read only property)

56.78.10 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.78.11 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

(Read only property)

56.78.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0

DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.78.13 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de máscara
Type:	CIAttributeTypeImage

See AttributeinputMaskImage for more details.
(Read and Write property)

56.78.14 inputShadowDensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Density
Notes:

Name:	inputShadowDensity
Class:	double (NSNumber)
DisplayName English:	Shadow Density
DisplayName German:	Schattendichte
DisplayName French:	Densité de l'ombre
DisplayName Italian:	Densità ombra
DisplayName Spanish:	Densidad del sombreado
Type:	CIAttributeTypeScalar

See AttributeinputShadowDensity for more details.
(Read and Write property)

56.78.15 inputShadowOffset as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Offset
Notes:

Name:	inputShadowOffset
Class:	CIVectorMBS (CIVector)
DisplayName English:	Shadow Offset
DisplayName German:	Schattenabstand
DisplayName French:	Décalage de l'ombre
DisplayName Italian:	Offset ombra
DisplayName Spanish:	Proyección del sombreado
Type:	CIAttributeTypeOffset

See AttributeinputShadowOffset for more details.
(Read and Write property)

56.78.16 inputShadowRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Radius
Notes:

Name:	inputShadowRadius
Class:	double (NSNumber)
DisplayName English:	Shadow Radius
DisplayName German:	Schattenradius
DisplayName French:	Rayon de l'ombre
DisplayName Italian:	Raggio dell'ombra
DisplayName Spanish:	Radio del sombreado
Type:	CIAttributeTypeDistance

See AttributeinputShadowRadius for more details.
(Read and Write property)

56.78.17 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

56.78.18 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

56.79 class CIFilterDisparityToDepthMBS

56.79.1 class CIFilterDisparityToDepthMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Disparity To Depth filter.
Notes:

Details for this filter:

FilterName:	CIDisparityToDepth
DisplayName English:	Disparity To Depth
DisplayName German:	Abweichung zu Tiefe
DisplayName French:	Disparité en profondeur
DisplayName Italian:	Da disparità a profondità
DisplayName Spanish:	De disparidad a profundidad

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.79.2 Methods

56.79.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.79.4 Properties

56.79.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disparity To Depth attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.79.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.80 class CIFilterDisplacementDistortionMBS

56.80.1 class CIFilterDisplacementDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Displacement Distortion filter.
Notes:

Details for this filter:

FilterName:	CIDisplacementDistortion
DisplayName English:	Displacement Distortion
DisplayName German:	Verzerrung „Verdrängung“
DisplayName French:	Déformation Déplacement
DisplayName Italian:	Distorsione spostamento
DisplayName Spanish:	Distorsión de desplazamiento

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputDisplacementImage: Displacement Image
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.80.2 Methods

56.80.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.80.4 Properties

56.80.5 AttributeinputDisplacementImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Displacement Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputDisplacementImage
Class:	CIImageMBS
DisplayName English:	Displacement Image
DisplayName German:	Bildverschiebung
DisplayName French:	Image du déplacement
DisplayName Italian:	Immagine spostamento
DisplayName Spanish:	Imagen de desplazamiento
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.80.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Displacement Distortion attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

56.80.7 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Displacement Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	50
IdentityNumber:	0
SliderMaxNumber:	200
SliderMinNumber:	0

(Read only property)

56.80.8 inputDisplacementImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Displacement Image
Notes:

See AttributeinputDisplacementImage for more details.
(Read and Write property)

Name:	inputDisplacementImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Displacement Image
DisplayName German:	Bildverschiebung
DisplayName French:	Image du déplacement
DisplayName Italian:	Immagine spostamento
DisplayName Spanish:	Imagen de desplazamiento
Type:	

56.80.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.80.10 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

See AttributeinputScale for more details.
(Read and Write property)

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeDistance

56.81 class CIFilterDissolveTransitionMBS

56.81.1 class CIFilterDissolveTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Dissolve filter.
Notes:

Details for this filter:

FilterName:	CIDissolveTransition
DisplayName English:	Dissolve
DisplayName German:	Überblenden
DisplayName French:	Dissoudre
DisplayName Italian:	Dissolvenza
DisplayName Spanish:	Disolución

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.81.2 Methods

56.81.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.81.4 Properties

56.81.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dissolve attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.81.6 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dissolve attribute.
Notes:

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.81.7 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dissolve attribute.
Notes:

This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.81.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.81.9 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

56.81.10 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

56.82 class CIFilterDitherMBS

56.82.1 class CIFilterDitherMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Dither filter.
Notes:

Details for this filter:

FilterName:	CIDither
DisplayName English:	Dither
DisplayName German:	Dither
DisplayName French:	Tramage
DisplayName Italian:	Dithering
DisplayName Spanish:	Tramar

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.82.2 Methods

56.82.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.82.4 Properties

56.82.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dither attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.82.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dither attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensität
DisplayName French:	Intensité
DisplayName Italian:	Intensità
DisplayName Spanish:	Intensidad
DefaultNumber:	0.1
IdentityNumber:	0
MaxNumber:	5
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.82.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.82.8 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensität
DisplayName French:	Intensité
DisplayName Italian:	Intensità
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

See AttributeinputIntensity for more details.
(Read and Write property)

56.83 class CIFilterDivideBlendModeMBS

56.83.1 class CIFilterDivideBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Divide Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIDivideBlendMode
DisplayName English:	Divide Blend Mode
DisplayName German:	Mischmethode „Teilen“
DisplayName French:	Mode de fusion Diviser
DisplayName Italian:	Modalità sfumatura dissolvenza
DisplayName Spanish:	Dividir modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.83.2 Methods

56.83.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.83.4 Properties

56.83.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Divide Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.83.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Divide Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.83.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.83.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.84 class CIFilterDotScreenMBS

56.84.1 class CIFilterDotScreenMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Dot Screen filter.
Notes:

Details for this filter:

FilterName:	CIDotScreen
DisplayName English:	Dot Screen
DisplayName German:	Punktförmiges Halbtonraster
DisplayName French:	Écran en pointillé
DisplayName Italian:	Schermo a punti
DisplayName Spanish:	Pantalla punteada

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.84.2 Methods

56.84.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.84.4 Properties

56.84.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dot Screen attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

56.84.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dot Screen attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.84.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dot Screen attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.84.8 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dot Screen attribute.
Notes:

This attribute should have this content:

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Sharpness
DisplayName German:	Schärfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.7
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0

SliderMinNumber:	0

(Read only property)

56.84.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dot Screen attribute.
Notes:

This attribute should have this content:

(Read only property)

56.84.10 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

See AttributeinputAngle for more details.
(Read and Write property)

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	6
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	50
SliderMinNumber:	2

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

56.84.11 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.84.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.84.13 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Schärfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

56.84.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

56.85 class CIFilterDrosteMBS

56.85.1 class CIFilterDrosteMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Droste filter.
Notes:

Details for this filter:

FilterName:	CIDroste
DisplayName English:	Droste
DisplayName German:	Droste
DisplayName French:	Droste
DisplayName Italian:	Droste
DisplayName Spanish:	Droste

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputInsetPoint0: Inset Point 0
- inputInsetPoint1: Inset Point 1
- inputStrands: Strands
- inputPeriodicity: Periodicity
- inputRotation: Rotation
- inputZoom: Zoom

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.85.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

56.85.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

56.85.4 Methods

56.85.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.85.6 Properties

56.85.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

(Read only property)

56.85.8 AttributeinputInsetPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

This attribute should have this content:

Name:	inputInsetPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Inset Point 0
DisplayName German:	Abstandspunkt 0
DisplayName French:	Point d'insertion 0
DisplayName Italian:	Punto di inserimento 0
DisplayName Spanish:	Insertar punto 0
DefaultVector:	[200 200]
IdentityVector:	n/a

(Read only property)

56.85.9 AttributeinputInsetPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

(Read only property)

56.85.10 AttributeinputPeriodicity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputInsetPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Inset Point 1
DisplayName German:	Abstandspunkt 1
DisplayName French:	Point d'insertion 1
DisplayName Italian:	Punto di inserimento 1
DisplayName Spanish:	Insertar punto 1
DefaultVector:	[400 400]
IdentityVector:	n/a

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

Name:	inputPeriodicity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Periodicity
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	5
SliderMinNumber:	1

(Read only property)

56.85.11 AttributeinputRotation as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputRotation
Class:	double
Type:	CIAttributeTypeAngle
DisplayName:	Rotation
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	0

56.85.12 AttributeinputStrands as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

Name:	inputStrands
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Strands
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	10
MinNumber:	-10
SliderMaxNumber:	2
SliderMinNumber:	-2

(Read only property)

56.85.13 AttributeinputZoom as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputZoom
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Zoom
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	0
MinNumber:	0.01
SliderMaxNumber:	5
SliderMinNumber:	0.01

56.85.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.85.15 inputInsetPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Inset Point 0
Notes:

See AttributeinputInsetPoint0 for more details.
(Read and Write property)

Name:	inputInsetPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Inset Point 0
DisplayName German:	Abstandspunkt 0
DisplayName French:	Point d'insertion 0
DisplayName Italian:	Punto di inserimento 0
DisplayName Spanish:	Insertar punto 0
Type:	CIAttributeTypePosition

56.85.16 inputInsetPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Inset Point 1
Notes:

Name:	inputInsetPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Inset Point 1
DisplayName German:	Abstandspunkt 1
DisplayName French:	Point d'insertion 1
DisplayName Italian:	Punto di inserimento 1
DisplayName Spanish:	Insertar punto 1
Type:	CIAttributeTypePosition

See AttributeinputInsetPoint1 for more details.
(Read and Write property)

56.85.17 inputPeriodicity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Periodicity
Notes:

Name:	inputPeriodicity
Class:	double (NSNumber)
DisplayName English:	Periodicity
DisplayName German:	Periodicity
DisplayName French:	Periodicity
DisplayName Italian:	Periodicity
DisplayName Spanish:	Periodicity
Type:	CIAttributeTypeScalar

See AttributeinputPeriodicity for more details.
(Read and Write property)

56.85.18 inputRotation as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Rotation
Notes:

Name:	inputRotation
Class:	double (NSNumber)
DisplayName English:	Rotation
DisplayName German:	Rotation
DisplayName French:	Rotation
DisplayName Italian:	Rotation
DisplayName Spanish:	Rotation
Type:	CIAttributeTypeAngle

See AttributeinputRotation for more details.
(Read and Write property)

56.85.19 inputStrands as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Strands
Notes:

Name:	inputStrands
Class:	double (NSNumber)
DisplayName English:	Strands
DisplayName German:	Strands
DisplayName French:	Strands
DisplayName Italian:	Strands
DisplayName Spanish:	Strands
Type:	CIAttributeTypeScalar

See AttributeinputStrands for more details.
(Read and Write property)

56.85.20 inputZoom as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Zoom
Notes:

Name:	inputZoom
Class:	double (NSNumber)
DisplayName English:	Zoom
DisplayName German:	Zoom
DisplayName French:	Zoom
DisplayName Italian:	Zoom
DisplayName Spanish:	Zoom
Type:	CIAttributeTypeScalar

See AttributeinputZoom for more details.
(Read and Write property)

56.86 class CIFilterEdgePreserveUpsampleFilterMBS

56.86.1 class CIFilterEdgePreserveUpsampleFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Edge Preserve Upsample Filter filter.
Notes:

Details for this filter:

FilterName:	CIEdgePreserveUpsampleFilter
DisplayName English:	Edge Preserve Upsample Filter
DisplayName German:	Kantenerhaltender Upsample-Filter
DisplayName French:	Filtre de suréchantillonnage pour la préservation des contours
DisplayName Italian:	Filtro di ricampionamento per la conservazione dei bordi
DisplayName Spanish:	Filtro de interpolación con preservación de bordes

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputSmallImage: Small Image
- inputSpatialSigma: Spatial Sigma
- inputLumaSigma: Luma Sigma

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.86.2 Methods

56.86.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.86.4 Properties

56.86.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Preserve Upsample Filter attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.86.6 AttributeinputLumaSigma as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Preserve Upsample Filter attribute.
Notes:

This attribute should have this content:

Name:	inputLumaSigma
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Luma Sigma
DisplayName German:	Luma-Sigma
DisplayName French:	Sigma de la luminance
DisplayName Italian:	Sigma luminanza
DisplayName Spanish:	Desviación estándar sigma de luminancia
DefaultNumber:	0.15
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0

(Read only property)

56.86.7 AttributeinputSmallImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Preserve Upsample Filter attribute.
Notes:

This attribute should have this content:

Name:	inputSmallImage
Class:	CIImageMBS
DisplayName English:	Small Image
DisplayName German:	Kleines Bild
DisplayName French:	Petite image
DisplayName Italian:	Immagine di dimensioni ridotte
DisplayName Spanish:	Imagen pequeña
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.86.8 AttributeinputSpatialSigma as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Preserve Upsample Filter attribute.
Notes:

This attribute should have this content:

Name:	inputSpatialSigma
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Spatial Sigma
DisplayName German:	Räumliches Sigma
DisplayName French:	Sigma spatial
DisplayName Italian:	Sigma spaziale
DisplayName Spanish:	Desviación estándar sigma espacial
DefaultNumber:	3
IdentityNumber:	0
MaxNumber:	5
MinNumber:	0

(Read only property)

56.86.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.86.10 inputLumaSigma as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Luma Sigma
Notes:

Name:	inputLumaSigma
Class:	double (NSNumber)
DisplayName English:	Luma Sigma
DisplayName German:	Luma-Sigma
DisplayName French:	Sigma de la luminance
DisplayName Italian:	Sigma luminanza
DisplayName Spanish:	Desviación estándar sigma de luminancia
Type:	CIAttributeTypeScalar

See AttributeinputLumaSigma for more details.
(Read and Write property)

56.86.11 inputSmallImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Small Image
Notes:

Name:	inputSmallImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Small Image
DisplayName German:	Kleines Bild
DisplayName French:	Petite image
DisplayName Italian:	Immagine di dimensioni ridotte
DisplayName Spanish:	Imagen pequeña
Type:	

See AttributeinputSmallImage for more details.
(Read and Write property)

56.86.12 inputSpatialSigma as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Spatial Sigma
Notes:

See AttributeinputSpatialSigma for more details.
(Read and Write property)

Name:	inputSpatialSigma
Class:	double (NSNumber)
DisplayName English:	Spatial Sigma
DisplayName German:	Räumliches Sigma
DisplayName French:	Sigma spatial
DisplayName Italian:	Sigma spaziale
DisplayName Spanish:	Desviación estándar sigma espacial
Type:	CIAttributeTypeScalar

56.87 class CIFilterEdgesMBS

56.87.1 class CIFilterEdgesMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Edges filter.
Notes:

Details for this filter:

FilterName:	CIEdges
DisplayName English:	Edges
DisplayName German:	Kanten
DisplayName French:	Contours
DisplayName Italian:	Estremità
DisplayName Spanish:	Bordes

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.87.2 Methods

56.87.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.87.4 Properties

56.87.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edges attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.87.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edges attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensität
DisplayName French:	Intensité
DisplayName Italian:	Intensità
DisplayName Spanish:	Intensidad
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

56.87.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.87.8 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

See AttributeinputIntensity for more details.

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensität
DisplayName French:	Intensité
DisplayName Italian:	Intensità
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

(Read and Write property)

56.88 class CIFilterEdgeWorkMBS

56.88.1 class CIFilterEdgeWorkMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Edge Work filter.
Notes:

Details for this filter:

FilterName:	CIEdgeWork
DisplayName English:	Edge Work
DisplayName German:	Kontur finden
DisplayName French:	Contourage
DisplayName Italian:	Lavoro sull'estremità
DisplayName Spanish:	Trabajo en bordes

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.88.2 Methods

56.88.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.88.4 Properties

56.88.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Work attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.88.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Work attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	3
IdentityNumber:	0
SliderMaxNumber:	20
SliderMinNumber:	0

(Read only property)

56.88.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.88.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

(Read and Write property)

56.89 class CIFilterEightfoldReflectedTileMBS

56.89.1 class CIFilterEightfoldReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Eightfold Reflected Tile filter.
Notes:

Details for this filter:

FilterName:	CIEightfoldReflectedTile
DisplayName English:	Eightfold Reflected Tile
DisplayName German:	8-fach reflektierte Kachel
DisplayName French:	Mosaïque réfléchie 8 fois
DisplayName Italian:	Mosaico riflesso in otto direzioni
DisplayName Spanish:	Mosaico reflejado ocho veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.89.2 Methods

56.89.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.89.4 Properties

56.89.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Eightfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

56.89.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Eightfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.89.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Eightfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.89.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Eightfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

56.89.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

56.89.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.89.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.89.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

56.90 class CIFilterExclusionBlendModeMBS

56.90.1 class CIFilterExclusionBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Exclusion Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIExclusionBlendMode
DisplayName English:	Exclusion Blend Mode
DisplayName German:	Mischmethode „Ausschluss“
DisplayName French:	Mode de fusion Exclusion
DisplayName Italian:	Modalità sfumatura esclusione
DisplayName Spanish:	Modo de mezcla por exclusión

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.90.2 Methods

56.90.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.90.4 Properties

56.90.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exclusion Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.90.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exclusion Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.90.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.90.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.91 class CIFilterExposureAdjustMBS

56.91.1 class CIFilterExposureAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Exposure Adjust filter.
Notes:

Details for this filter:

FilterName:	CIExposureAdjust
DisplayName English:	Exposure Adjust
DisplayName German:	Belichtung anpassen
DisplayName French:	Ajustement d'exposition
DisplayName Italian:	Regolazione esposizione
DisplayName Spanish:	Ajuste de exposición

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In
- CICategoryXMPSerializable: CICategoryXMPSerializable

Input:

- inputImage: Image
- inputEV: EV

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.91.2 Methods

56.91.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.91.4 Properties

56.91.5 AttributeinputEV as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exposure Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputEV
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	EV
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	-10

(Read only property)

56.91.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exposure Adjust attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

56.91.7 inputEV as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute EV
Notes:

Name:	inputEV
Class:	double (NSNumber)
DisplayName English:	EV
DisplayName German:	EV
DisplayName French:	EV
DisplayName Italian:	EV
DisplayName Spanish:	EV
Type:	CIAttributeTypeScalar

See AttributeinputEV for more details.
(Read and Write property)

56.91.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.92 class CIFilterFalseColorMBS

56.92.1 class CIFilterFalseColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage False Color filter.
Notes:

Details for this filter:

FilterName:	CIFalseColor
DisplayName English:	False Color
DisplayName German:	Falschfarbendarstellung
DisplayName French:	Fausse couleur
DisplayName Italian:	Colore falso
DisplayName Spanish:	Color falso

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputColor0: Color 1
- inputColor1: Color 2

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.92.2 Methods

56.92.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.92.4 Properties

56.92.5 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the False Color attribute.
Notes:

This attribute should have this content:

Name:	inputColor0
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 0.3, Green = 0, Blue = 0, Alpha = 1
IdentityNumber:	0

(Read only property)

56.92.6 AttributeinputColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the False Color attribute.
Notes:

This attribute should have this content:

Name:	inputColor1
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
DefaultColor:	Red = 1, Green = 0.9, Blue = 0.8, Alpha = 1
IdentityNumber:	0

(Read only property)

56.92.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the False Color attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.92.8 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	CIAttributeTypeColor

See AttributeinputColor0 for more details.
(Read and Write property)

56.92.9 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	CIAttributeTypeColor

See AttributeinputColor1 for more details.
(Read and Write property)

56.92.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.93 class CIFilterFlashTransitionMBS

56.93.1 class CIFilterFlashTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Flash filter.
Notes:

Details for this filter:

FilterName:	CIFlashTransition
DisplayName English:	Flash
DisplayName German:	Blinken
DisplayName French:	Flash
DisplayName Italian:	Flash
DisplayName Spanish:	Flash

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputCenter: Center
- inputExtent: Extent
- inputColor: Color
- inputTime: Time
- inputMaxStriationRadius: Maximum Striation Radius
- inputStriationStrength: Striation Strength
- inputStriationContrast: Striation Contrast

- inputFadeThreshold: Fade Threshold

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.93.2 Methods

56.93.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.93.4 Properties

56.93.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.93.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 0.8, Blue = 0.6, Alpha = 1
IdentityNumber:	0

(Read only property)

56.93.7 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 300 300]
IdentityVector:	n/a

(Read only property)

56.93.8 AttributeinputFadeThreshold as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputFadeThreshold
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Fade Threshold
DisplayName German:	Schwellenwert für Überblenden
DisplayName French:	Seuil de décoloration
DisplayName Italian:	Soglia dissolvenza
DisplayName Spanish:	Umbral de desvanecimiento
DefaultNumber:	0.85
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.93.9 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

(Read only property)

56.93.10 AttributeinputMaxStriationRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

This attribute should have this content:

Name:	inputMaxStriationRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Maximum Striation Radius
DisplayName German:	Maximaler Radius für Riffelung
DisplayName French:	Rayon maximum des stries
DisplayName Italian:	Raggio di massima striatura
DisplayName Spanish:	Radio de estriación máximo
DefaultNumber:	2.58
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

56.93.11 AttributeinputStriationContrast as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputStriationContrast
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast für Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriación
DefaultNumber:	1.375
IdentityNumber:	0
SliderMaxNumber:	5
SliderMinNumber:	0

56.93.12 AttributeinputStriationStrength as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputStriationStrength
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Strength
DisplayName German:	Stärke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriación
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	3
SliderMinNumber:	0

(Read only property)

56.93.13 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.93.14 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.93.15 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.93.16 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

See AttributeinputColor for more details.
(Read and Write property)

56.93.17 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	Étendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

56.93.18 inputFadeThreshold as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Fade Threshold
Notes:

Name:	inputFadeThreshold
Class:	double (NSNumber)
DisplayName English:	Fade Threshold
DisplayName German:	Schwellenwert für Überblenden
DisplayName French:	Seuil de décoloration
DisplayName Italian:	Soglia dissolvenza
DisplayName Spanish:	Umbral de desvanecimiento
Type:	CIAttributeTypeScalar

See AttributeinputFadeThreshold for more details.
(Read and Write property)

56.93.19 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.93.20 inputMaxStriationRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Maximum Striation Radius
Notes:

Name:	inputMaxStriationRadius
Class:	double (NSNumber)
DisplayName English:	Maximum Striation Radius
DisplayName German:	Maximaler Radius für Riffelung
DisplayName French:	Rayon maximum des stries
DisplayName Italian:	Raggio di massima striatura
DisplayName Spanish:	Radio de estriación máximo
Type:	CIAttributeTypeScalar

See AttributeinputMaxStriationRadius for more details.
(Read and Write property)

56.93.21 inputStriationContrast as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Contrast
Notes:

Name:	inputStriationContrast
Class:	double (NSNumber)
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast für Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriación
Type:	CIAttributeTypeScalar

See AttributeinputStriationContrast for more details.
(Read and Write property)

56.93.22 inputStriationStrength as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Strength
Notes:

Name:	inputStriationStrength
Class:	double (NSNumber)
DisplayName English:	Striation Strength
DisplayName German:	Stärke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriación
Type:	CIAttributeTypeScalar

See AttributeinputStriationStrength for more details.
(Read and Write property)

56.93.23 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

56.93.24 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Durée
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

56.94 class CIFilterFourfoldReflectedTileMBS

56.94.1 class CIFilterFourfoldReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Fourfold Reflected Tile filter.
Notes:

Details for this filter:

FilterName:	CIFourfoldReflectedTile
DisplayName English:	Fourfold Reflected Tile
DisplayName German:	4-fach reflektierte Kachel
DisplayName French:	Mosaïque réfléchie 4 fois
DisplayName Italian:	Mosaico riflesso in quattro direzioni
DisplayName Spanish:	Mosaico reflejado cuatro veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputAcuteAngle: Acute Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.94.2 Methods

56.94.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.94.4 Properties

56.94.5 AttributeinputAcuteAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAcuteAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	Ángulo agudo
DefaultNumber:	1.570796
IdentityNumber:	1.570796
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

56.94.6 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

56.94.7 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.94.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.94.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

56.94.10 inputAcuteAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Acute Angle
Notes:

Name:	inputAcuteAngle
Class:	double (NSNumber)
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	Ángulo agudo
Type:	CIAttributeTypeAngle

See AttributeinputAcuteAngle for more details.
(Read and Write property)

56.94.11 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

56.94.12 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.94.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.94.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

56.95 class CIFilterFourfoldRotatedTileMBS

56.95.1 class CIFilterFourfoldRotatedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Fourfold Rotated Tile filter.
Notes:

Details for this filter:

FilterName:	CIFourfoldRotatedTile
DisplayName English:	Fourfold Rotated Tile
DisplayName German:	4-fach gedrehte Kachel
DisplayName French:	Mosaïque pivotée 4 fois
DisplayName Italian:	Mosaico ruotato in quattro direzioni
DisplayName Spanish:	Mosaico rotado cuatro veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.95.2 Methods

56.95.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.95.4 Properties

56.95.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

56.95.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.95.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.95.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

56.95.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

56.95.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.95.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.95.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

56.96 class CIFilterFourfoldTranslatedTileMBS

56.96.1 class CIFilterFourfoldTranslatedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Fourfold Translated Tile filter.
Notes:

Details for this filter:

FilterName:	CIFourfoldTranslatedTile
DisplayName English:	Fourfold Translated Tile
DisplayName German:	4-fach übersetzte Kachel
DisplayName French:	Mosaïque déplacée 4 fois
DisplayName Italian:	Mosaico traslato in quattro direzioni
DisplayName Spanish:	Mosaico desplazado cuatro veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputAcuteAngle: Acute Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.96.2 Methods

56.96.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.96.4 Properties

56.96.5 AttributeinputAcuteAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Translated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAcuteAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	Ángulo agudo
DefaultNumber:	1.570796
IdentityNumber:	1.570796
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

56.96.6 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Translated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

56.96.7 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Translated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.96.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Translated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.96.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Translated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

56.96.10 inputAcuteAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Acute Angle
Notes:

Name:	inputAcuteAngle
Class:	double (NSNumber)
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	Ángulo agudo
Type:	CIAttributeTypeAngle

See AttributeinputAcuteAngle for more details.
(Read and Write property)

56.96.11 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

56.96.12 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.96.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.96.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

56.97 class CIFilterGammaAdjustMBS

56.97.1 class CIFilterGammaAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gamma Adjust filter.
Notes:

Details for this filter:

FilterName:	CIGammaAdjust
DisplayName English:	Gamma Adjust
DisplayName German:	Gamma anpassen
DisplayName French:	Ajustement gamma
DisplayName Italian:	Regolazione gamma
DisplayName Spanish:	Ajuste de gama

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputPower: Power

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.97.2 Methods

56.97.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.97.4 Properties

56.97.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gamma Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.97.6 AttributeinputPower as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gamma Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputPower
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Power
DisplayName German:	Stärke
DisplayName French:	Puissance
DisplayName Italian:	Energia
DisplayName Spanish:	Alimentación
DefaultNumber:	0.75
IdentityNumber:	1
SliderMaxNumber:	4
SliderMinNumber:	0.25

(Read only property)

56.97.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.97.8 inputPower as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Power
Notes:

See AttributeinputPower for more details.

Name:	inputPower
Class:	double (NSNumber)
DisplayName English:	Power
DisplayName German:	Stärke
DisplayName French:	Puissance
DisplayName Italian:	Energia
DisplayName Spanish:	Alimentación
Type:	CIAttributeTypeScalar

(Read and Write property)

56.98 class CIFilterGaussianBlurMBS

56.98.1 class CIFilterGaussianBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gaussian Blur filter.
Example:

```
dim CIFilter as new CIFilterGaussianBlurMBS
dim ROIpic as Picture = LogoMBS(500)
dim CGImage as CGImageMBS = CGCreateImageMBS(ROIpic)
dim ciimage as CIImageMBS = NewCIImagewithCGImageMBS(CGImage)

CIFilter.inputImage = CIImage
cifilter.inputRadius = 10 //the property which holds the blur radius

dim result as CIImageMBS = cifilter.outputImage

dim r as Picture = result.RenderPicture

window1.Backdrop = r
```

Notes:

Details for this filter:

FilterName:	CIGaussianBlur
DisplayName English:	Gaussian Blur
DisplayName German:	Gauß'sche Unschärfe
DisplayName French:	Flou gaussien
DisplayName Italian:	Sfumatura gaussiana
DisplayName Spanish:	Difuminado gaussiano

Categories:

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Warning: Due to the blur, the output image may be bigger, so you need to crop space on the border to get back to old size.
Subclass of the CIFilterMBS class.

56.98.2 Methods

56.98.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.98.4 Properties

56.98.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Blur attribute.
Notes:

This attribute should have this content:

(Read only property)

56.98.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Blur attribute.
Notes:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

(Read only property)

56.98.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

56.98.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

See AttributeinputRadius for more details.
(Read and Write property)

56.99 class CIFilterGaussianGradientMBS

56.99.1 class CIFilterGaussianGradientMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gaussian Gradient filter.
Notes:

Details for this filter:

FilterName:	CIGaussianGradient
DisplayName English:	Gaussian Gradient
DisplayName German:	Gauß'scher Verlauf
DisplayName French:	Dégradé gaussien
DisplayName Italian:	Gradiente gaussiano
DisplayName Spanish:	Degradado gaussiano

Categories:

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputCenter: Center
- inputColor0: Color 1
- inputColor1: Color 2
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.99.14 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

56.100 class CIFilterGeneratorMBS

56.100.1 class CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: An object that creates and configures chains of individual image filters.
Notes:

The CIFilterGenerator class provides methods for creating a CIFilter object by chaining together existing CIFilter objects to create complex effects. (A filter chain refers to the CIFilter objects that are connected in the CIFilterGenerator object.) The complex effect can be encapsulated as a CIFilterGenerator object and saved as a file so that it can be used again. The filter generator file contains an archived instance of all the CIFilter objects that are chained together.

Any filter generator files that you copy to /Library/Graphics/Image Units/ are loaded when any of the loading methods provided by the CIPlugIn class are invoked. A CIFilterGenerator object is registered by its filename or, if present, by a class attribute that you supply in its description.

You can create a CIFilterGenerator object programmatically, using the methods provided by the CIFilterGenerator class, or by using the editor view provided by Core Image (see CIFilter Image Kit Additions).

56.100.4 Methods

56.100.5 connectObject(sourceObject as Variant, sourceKey as string, targetObject as Variant, targetKey as String)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds an object to the filter chain.
Notes:

sourceObject: A CIFilterMBS object, a CIImageMBS object, or a the path (an string or folderitem object) to an image.
sourceKey: The key that specifies the source object. For example, if the source is the output image of a

filter, pass the outputImage key. Pass nil if the source object is used directly.
targetObject: The object that to link the source object to.
targetKey: The key that specifies the target for the source. For example, if you are connecting the source to the input image of a CIFilterMBS object, you would pass the inputImage key.

56.100.6 Constructor

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns an empty filter generator object.
Notes: You use the returned object to connect two or more CIFilter objects and input images. It is also valid to have only one CIFilter object in a filter generator.
See also:

- 56.100.7 Constructor(File as folderItem) 11224
- 56.100.8 Constructor(Handle as Integer) 11224
- 56.100.9 Constructor(URL as string) 11225

56.100.7 Constructor(File as folderItem)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Raises exception on failure.
See also:

- 56.100.6 Constructor 11224
- 56.100.8 Constructor(Handle as Integer) 11224
- 56.100.9 Constructor(URL as string) 11225

56.100.8 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes Xojo object with given handle to CIFilterGenerator object.
See also:

- 56.100.6 Constructor 11224
- 56.100.7 Constructor(File as folderItem) 11224
- 56.100.9 Constructor(URL as string) 11225

56.100.9 Constructor(URL as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Raises exception on failure.
See also:

- 56.100.6 Constructor 11224
- 56.100.7 Constructor(File as folderItem) 11224
- 56.100.8 Constructor(Handle as Integer) 11224

56.100.10 copy as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the object.

56.100.11 disconnectObject(sourceObject as Variant, sourceKey as string, targetObject as Variant, targetKey as String)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes the connection between two objects in the filter chain.
Notes:

sourceObject: A CIFilterMBS object, a CIImageMBS object, or a the path (an string or folderitem object) to an image.
sourceKey: The key that specifies the source object. Pass nil if the source object is used directly.
targetObject: The object that you want to disconnect the source object from.
targetKey: The key that specifies the target that the source object is currently connected to.

56.100.12 exportKey(key as string, targetObject as Variant, exportedKeyName as String)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Exports an input or output key of an object in the filter chain.
Notes:

key: The key to export from the target object (for example, inputImage).
targetObject: The object associated with the key (for example, the filter).

exportedKeyName: A unique name to use for the exported key. Pass "" to use the original key name.

When you create a CIFilterMBS object from a CIFilterGeneratorMBS object, you might want the filter client to be able to set some of the parameters associated with the filter chain. You can make a parameter settable by exporting the key associated with the parameter. If the exported key represents an input parameter of the filter, the key is exported as an input key. If the key represents an output parameter, it is exported as an output key.

56.100.13 filterGenerator as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns an empty filter generator object.
Notes: You use the returned object to connect two or more CIFilter objects and input images. It is also valid to have only one CIFilter object in a filter generator.

56.100.14 filterGeneratorWithContentsOfFile(File as folderItem) as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Returns a CIFilterGeneratorMBS object; returns nil if the file can't be read.

56.100.15 filterGeneratorWithContentsOfURL(URL as string) as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Returns a CIFilterGeneratorMBS object; returns nil if the file can't be read.

56.100.16 filterWithName(name as String) as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries filter based on it's name.
Notes: Returns nil in case of error.

56.100.17 kCIFilterGeneratorExportedKey as String

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the dictionary keys describing exports.
Notes: The key (CIFilterGeneratorExportedKey) for the exported parameter. The associated value is the key name of the parameter you are exporting, such as inputRadius.

56.100.18 kCIFilterGeneratorExportedKeyName as String

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the dictionary keys describing exports.
Notes: The key (CIFilterGeneratorExportedKey) for the exported parameter. The associated value is the key name of the parameter you are exporting, such as inputRadius.

56.100.19 kCIFilterGeneratorExportedKeyTargetObject as String

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the dictionary keys describing exports.
Notes: The target object (CIFilterGeneratorExportedKeyTargetObject) for the exported key. The associated value is the name of the object, such as CIMotionBlur.

56.100.20 registerFilterName(name as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Registers the name associated with a filter chain.
Notes:

name: A unique name for the filter chain you want to register.

This method allows you to register the filter chain as a named filter in the Core Image filter repository. You can then create a CIFilterMBS object from it using the the filterWithName method of the CIFilterMBS class.

56.100.21 removeExportedKey(exportedKeyName as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes a key that was previously exported.

56.100.22 setAttributes(attributes as dictionary, ExportedKey as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a dictionary of attributes for an exported key.
Notes:

attributes: A dictionary that describes the attributes associated with the specified key.
key: The exported key whose attributes you want to set.

By default, the exported key inherits the attributes from its original key and target object. You can use this method to change one or more of the existing attributes for the key, such as the default value or maximum value. For more information on attributes, see CIFilterMBS and Core Image Programming Guide.

56.100.23 writeToFile(File as FolderItem, atomically as Boolean = true) as Boolean

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Archives a filter generator object to a filter generator file.
Notes:

File: A location for the file generator file.
atomically: Pass true to specify that Core Image should create an interim file to avoid overwriting an existing file.

Returns true if the the object is successfully archived to the file.
Use this method to save your filter chain to a file for later use.

56.100.24 writeToURL(URL as String, atomically as Boolean = true) as Boolean

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Archives a filter generator object to a filter generator file.
Notes:

URL: A location for the file generator file.

atomically: Pass true to specify that Core Image should create an interim file to avoid overwriting an existing file.

Returns true if the the object is successfully archived to the file.
Use this method to save your filter chain to a file for later use.

56.100.25 Properties

56.100.26 classAttributes as Dictionary

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class attributes associated with the filter.
Notes:

For more information about class attributes for a filter, see Core Image Programming Guide and the filter attributes key constants defined in CIFilterMBS.
(Read and Write property)

56.100.27 exportedKeys as Dictionary

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of the exported keys.
Notes:

An array of dictionaries that describe the exported key and target object. See kCIFilterGeneratorExportedKey, kCIFilterGeneratorExportedKeyTargetObject, and kCIFilterGeneratorExportedKey for keys used in the dictionary.

This method returns the keys that you exported using the exportKey method or that were exported before being written to the file from which you read the filter chain.
(Read only property)

56.100.28 filter as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a filter object based on the filter chain.
Notes:

The topology of the filter chain is immutable, meaning that any changes you make to the filter chain are not reflected in the filter. The returned filer has the input an output keys that are exported.

(Read only property)

56.100.29 Handle as Integer

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read only property)

56.101 class CIFilterGlassDistortionMBS

56.101.1 class CIFilterGlassDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Glass Distortion filter.
Notes:

Details for this filter:

FilterName:	CIGlassDistortion
DisplayName English:	Glass Distortion
DisplayName German:	Verzerrung „Glas“
DisplayName French:	Déformation Verre
DisplayName Italian:	Distorsione vetro
DisplayName Spanish:	Distorsión vidriosa

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTexture: Texture
- inputCenter: Center
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.101.2 Methods

56.101.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.101.4 Properties

56.101.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.101.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.101.7 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	200
IdentityNumber:	0
SliderMaxNumber:	500
SliderMinNumber:	0.01

(Read only property)

56.101.8 AttributeinputTexture as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputTexture
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Texture
DisplayName German:	Struktur
DisplayName French:	Texture
DisplayName Italian:	Trama
DisplayName Spanish:	Textura
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.101.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.101.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.101.11 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeDistance

See AttributeinputScale for more details.
(Read and Write property)

56.101.12 inputTexture as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Texture
Notes:

See AttributeinputTexture for more details.
(Read and Write property)

Name:	inputTexture
Class:	CIImageMBS (CIImage)
DisplayName English:	Texture
DisplayName German:	Struktur
DisplayName French:	Texture
DisplayName Italian:	Trama
DisplayName Spanish:	Textura
Type:	CIAttributeTypeImage

56.102 class CIFilterGlassLozengeMBS

56.102.1 class CIFilterGlassLozengeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Glass Lozenge filter.
Notes:

Details for this filter:

FilterName:	CIGlassLozenge
DisplayName English:	Glass Lozenge
DisplayName German:	Glasrhombus
DisplayName French:	Losange de verre
DisplayName Italian:	Losanga vetro
DisplayName Spanish:	Romboedro vidrioso

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputPoint0: Point 0
- inputPoint1: Point 1
- inputRadius: Radius
- inputRefraction: Refraction

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.102.2 Methods

56.102.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.102.4 Properties

56.102.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.102.6 AttributeinputPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes:

This attribute should have this content:

Name:	inputPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point 0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.102.7 AttributeinputPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes:

This attribute should have this content:

Name:	inputPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
DefaultVector:	[350 150]
IdentityVector:	n/a

(Read only property)

56.102.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	1000
SliderMinNumber:	0

(Read only property)

56.102.9 AttributeinputRefraction as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes:

This attribute should have this content:

Name:	inputRefraction
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Refraction
DisplayName German:	Lichtbrechung
DisplayName French:	Réfraction
DisplayName Italian:	Rifrazione
DisplayName Spanish:	Refracción
DefaultNumber:	1.7
IdentityNumber:	1
SliderMaxNumber:	5
SliderMinNumber:	0

(Read only property)

56.102.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.102.11 inputPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 0
Notes:

Name:	inputPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point 0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
Type:	CIAttributeTypePosition

See AttributeinputPoint0 for more details.
(Read and Write property)

56.102.12 inputPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 1
Notes:

Name:	inputPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
Type:	CIAttributeTypePosition

See AttributeinputPoint1 for more details.
(Read and Write property)

56.102.13 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

56.102.14 inputRefraction as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Refraction
Notes:

See AttributeinputRefraction for more details.
(Read and Write property)

Name:	inputRefraction
Class:	double (NSNumber)
DisplayName English:	Refraction
DisplayName German:	Lichtbrechung
DisplayName French:	Réfraction
DisplayName Italian:	Rifrazione
DisplayName Spanish:	Refracción
Type:	CIAttributeTypeScalar

56.103 class CIFilterGlideReflectedTileMBS

56.103.1 class CIFilterGlideReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Glide Reflected Tile filter.
Notes:

Details for this filter:

FilterName:	CIGlideReflectedTile
DisplayName English:	Glide Reflected Tile
DisplayName German:	Gleitende reflektierte Kachel
DisplayName French:	Mosaïque réfléchie « Glide »
DisplayName Italian:	Mosaico riflesso di scivolamento
DisplayName Spanish:	Mosaico de deslizamiento reflejado

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.103.2 Methods

56.103.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.103.4 Properties

56.103.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

56.103.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.103.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.103.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

56.103.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

56.103.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.103.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.103.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

56.104 class CIFilterGloomMBS

56.104.1 class CIFilterGloomMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gloom filter.
Notes:

Details for this filter:

FilterName:	CIGloom
DisplayName English:	Gloom
DisplayName German:	Düster
DisplayName French:	Ténèbres
DisplayName Italian:	Oscurità
DisplayName Spanish:	Oscurecer

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.104.2 Methods

56.104.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.104.4 Properties

56.104.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gloom attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.104.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gloom attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensität
DisplayName French:	Intensité
DisplayName Italian:	Intensità
DisplayName Spanish:	Intensidad
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.104.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gloom attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

(Read only property)

56.104.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.104.9 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensität
DisplayName French:	Intensité
DisplayName Italian:	Intensità
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

See AttributeinputIntensity for more details.
(Read and Write property)

56.104.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

56.105 class CIFilterGuidedFilterMBS

56.105.1 class CIFilterGuidedFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Guided Filter filter.
Notes:

Details for this filter:

FilterName:	CIGuidedFilter
DisplayName English:	Guided Filter
DisplayName German:	Geführter Filter
DisplayName French:	Filtre guidé
DisplayName Italian:	Filtro guidato
DisplayName Spanish:	Filtro guiado

Categories:

- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputGuideImage: A larger image to use as a guide.
- inputRadius: Radius
- inputEpsilon: Epsilon

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.105.2 Methods

56.105.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.105.4 Properties

56.105.5 AttributeinputEpsilon as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes:

This attribute should have this content:

Name:	inputEpsilon
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Epsilon
DisplayName German:	Epsilon
DisplayName French:	Epsilon
DisplayName Italian:	Ipsilon
DisplayName Spanish:	Épsilon
DefaultNumber:	0.0001
IdentityNumber:	0
SliderMaxNumber:	0.1
SliderMinNumber:	1.000000e-9

(Read only property)

56.105.6 AttributeinputGuideImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes:

This attribute should have this content:

Name:	inputGuideImage
Class:	CIImageMBS
DisplayName English:	A larger image to use as a guide.
DisplayName German:	Größeres Bild, das als Richtwert verwendet wird.
DisplayName French:	Une image plus grande à utiliser comme guide.
DisplayName Italian:	Immagine più grande da utilizzare come guida.
DisplayName Spanish:	Una imagen mayor para usar como guía.
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.105.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.105.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	1

(Read only property)

56.105.9 inputEpsilon as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Epsilon
Notes:

Name:	inputEpsilon
Class:	double (NSNumber)
DisplayName English:	Epsilon
DisplayName German:	Epsilon
DisplayName French:	Epsilon
DisplayName Italian:	Ipsilon
DisplayName Spanish:	Épsilon
Type:	CIAttributeTypeScalar

See AttributeinputEpsilon for more details.
(Read and Write property)

56.105.10 inputGuideImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute A larger image to use as a guide.
Notes:

Name:	inputGuideImage
Class:	CIImageMBS (CIImage)
DisplayName English:	A larger image to use as a guide.
DisplayName German:	Größeres Bild, das als Richtwert verwendet wird.
DisplayName French:	Une image plus grande à utiliser comme guide.
DisplayName Italian:	Immagine più grande da utilizzare come guida.
DisplayName Spanish:	Una imagen mayor para usar como guía.
Type:	

See AttributeinputGuideImage for more details.
(Read and Write property)

56.105.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.105.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

56.106 class CIFilterHardLightBlendModeMBS

56.106.1 class CIFilterHardLightBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hard Light Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIHardLightBlendMode
DisplayName English:	Hard Light Blend Mode
DisplayName German:	Mischmethode „Hartes Licht“
DisplayName French:	Mode de fusion Lumière crue
DisplayName Italian:	Modalità sfumatura luce intensa
DisplayName Spanish:	Modo de mezcla por luz directa

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.106.2 Methods

56.106.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.106.4 Properties

56.106.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hard Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.106.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hard Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.106.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d'arrière-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

56.106.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

56.107 class CIFilterHatchedScreenMBS

56.107.1 class CIFilterHatchedScreenMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hatched Screen filter.
Notes:

Details for this filter:

FilterName:	CIHatchedScreen
DisplayName English:	Hatched Screen
DisplayName German:	Schraffierter Bereich
DisplayName French:	Écran à traits parallèles
DisplayName Italian:	Schermo ombreggiato
DisplayName Spanish:	Pantalla tramada

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.107.2 Methods

56.107.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.107.4 Properties

56.107.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

56.107.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.107.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.107.8 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes:

This attribute should have this content:

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Sharpness
DisplayName German:	Schärfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.7
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.107.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes:

This attribute should have this content:

(Read only property)

56.107.10 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

See AttributeinputAngle for more details.
(Read and Write property)

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	6
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	50
SliderMinNumber:	2

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	Ángulo
Type:	CIAttributeTypeAngle

56.107.11 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.107.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.107.13 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Schärfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

56.107.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

56.108 class CIFilterHeightFieldFromMaskMBS

56.108.1 class CIFilterHeightFieldFromMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Height Field From Mask filter.
Notes:

Details for this filter:

FilterName:	CIHeightFieldFromMask
DisplayName English:	Height Field From Mask
DisplayName German:	Höhenwerte von Maske
DisplayName French:	Champ de hauteur du masque
DisplayName Italian:	Altezza campo dalla maschera
DisplayName Spanish:	Campo de altura a partir de máscara

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.108.2 Methods

56.108.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.108.4 Properties

56.108.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Height Field From Mask attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.108.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Height Field From Mask attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	10
SliderMaxNumber:	300
SliderMinNumber:	0

(Read only property)

56.108.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.108.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

(Read and Write property)

56.109 class CIFilterHexagonalPixellateMBS

56.109.1 class CIFilterHexagonalPixellateMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hexagonal Pixelate filter.
Notes:

Details for this filter:

FilterName:	CIHexagonalPixellate
DisplayName English:	Hexagonal Pixelate
DisplayName German:	Hexagonales Verpixeln
DisplayName French:	Pixellisation hexagonale
DisplayName Italian:	Effetto pixel esagonale
DisplayName Spanish:	Pixelado hexagonal

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.109.2 Methods

56.109.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.109.4 Properties

56.109.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hexagonal Pixelate attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

56.109.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hexagonal Pixelate attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

56.109.7 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hexagonal Pixelate attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	8
IdentityNumber:	1
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

(Read only property)

56.109.8 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

56.109.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.109.10 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	Échelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeDistance

See AttributeinputScale for more details.
(Read and Write property)

56.110 class CIFilterHighlightShadowAdjustMBS

56.110.1 class CIFilterHighlightShadowAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Highlight and Shadow Adjust filter.
Notes:

Details for this filter:

FilterName:	CIHighlightShadowAdjust
DisplayName English:	Highlight and Shadow Adjust
DisplayName German:	Helle und dunkle Bereiche anpassen
DisplayName French:	Ajuster les lumières et les ombres
DisplayName Italian:	Regolazione luce e ombre
DisplayName Spanish:	Ajuste de resaltados y sombras

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputShadowAmount: Shadow Amount
- inputHighlightAmount: Highlight Amount

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.110.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

56.110.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

56.110.4 Methods

56.110.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.110.6 Properties

56.110.7 AttributeinputHighlightAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Highlight and Shadow Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputHighlightAmount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Highlight Amount
DisplayName German:	Stärke der Hervorhebung
DisplayName French:	Quantité de surbrillance
DisplayName Italian:	Quantità luci
DisplayName Spanish:	Cantidad de resaltados

56.110.13 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

See AttributeinputRadius for more details.
(Read and Write property)

56.110.14 inputShadowAmount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Amount
Notes:

Name:	inputShadowAmount
Class:	double (NSNumber)
DisplayName English:	Shadow Amount
DisplayName German:	Schattenumfang
DisplayName French:	Quantité d'ombre
DisplayName Italian:	Quantità ombreggiatura
DisplayName Spanish:	Cantidad de sombreado
Type:	CIAttributeTypeScalar

See AttributeinputShadowAmount for more details.
(Read and Write property)

56.111 class CIFilterHistogramDisplayFilterMBS

56.111.1 class CIFilterHistogramDisplayFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Histogram Display filter.
Notes:

Details for this filter:

FilterName:	CIHistogramDisplayFilter
DisplayName English:	Histogram Display
DisplayName German:	Histogrammanzeige
DisplayName French:	Affichage de l'histogramme
DisplayName Italian:	Visualizzazione istogramma
DisplayName Spanish:	Visualización de histograma

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputHeight: Height
- inputHighLimit: High Limit
- inputLowLimit: Low Limit

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.111.4 Methods

56.111.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.111.6 Properties

56.111.7 AttributeinputHeight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Histogram Display attribute.
Notes:

This attribute should have this content:

Name:	inputHeight
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Height
DefaultNumber:	100
IdentityNumber:	0
MaxNumber:	200
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

(Read only property)

56.111.8 AttributeinputHighLimit as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Histogram Display attribute.
Notes:

This attribute should have this content:

Name:	inputHighLimit
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	High Limit
DisplayName German:	Höchstgrenze
DisplayName French:	Limite supérieure
DisplayName Italian:	Limite superiore
DisplayName Spanish:	Límite Alto
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.111.9 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Histogram Display attribute.
Notes:

This attribute should have this content:

(Read only property)

56.111.10 AttributeinputLowLimit as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Histogram Display attribute.
Notes:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

This attribute should have this content:

Name:	inputLowLimit
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Low Limit
DisplayName German:	Niedrigste Grenze
DisplayName French:	Limite inférieure
DisplayName Italian:	Limite inferiore
DisplayName Spanish:	Límite Bajo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

56.111.11 inputHeight as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Height
Notes:

See AttributeinputHeight for more details.
(Read and Write property)

Name:	inputHeight
Class:	double (NSNumber)
DisplayName English:	Height
DisplayName German:	Height
DisplayName French:	Height
DisplayName Italian:	Height
DisplayName Spanish:	Height
Type:	CIAttributeTypeScalar

56.111.12 inputHighLimit as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute High Limit
Notes:

Name:	inputHighLimit
Class:	double (NSNumber)
DisplayName English:	High Limit
DisplayName German:	Höchstgrenze
DisplayName French:	Limite supérieure
DisplayName Italian:	Limite superiore
DisplayName Spanish:	Límite Alto
Type:	CIAttributeTypeScalar

See AttributeinputHighLimit for more details.
(Read and Write property)

56.111.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

56.111.14 inputLowLimit as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Low Limit
Notes:

Name:	inputLowLimit
Class:	double (NSNumber)
DisplayName English:	Low Limit
DisplayName German:	Niedrigste Grenze
DisplayName French:	Limite inférieure
DisplayName Italian:	Limite inferiore
DisplayName Spanish:	Límite Bajo
Type:	CIAttributeTypeScalar

See AttributeinputLowLimit for more details.
(Read and Write property)

56.112 class CIFilterHoleDistortionMBS

56.112.1 class CIFilterHoleDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hole Distortion filter.
Notes:

Details for this filter:

FilterName:	CIHoleDistortion
DisplayName English:	Hole Distortion
DisplayName German:	Verzerrung „Loch“
DisplayName French:	Déformation Orifice
DisplayName Italian:	Distorsione foro
DisplayName Spanish:	Distorsión de orificios

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

56.112.2 Methods

56.112.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

56.112.4 Properties

56.112.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hole Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a
