

Image Zoom in Container

You remember my blog post [Interactive FileMaker Containers are Webviewers?](#)

Today we had more fun with images:

As you see we can zoom in for images in interactive containers using JavaScript and our [WebView.RunJavaScript](#) function. And of course we can center the zoomed image or scroll to any position.

Here the function call to switch width and height of the image to nature size:

```
MBS("WebView.RunJavaScript"; "ImageContainer";
```

```
// get image into variable  
"img = document.getElementsByTagName('img')[0];" &
```

```
// remove CSS  
"img.style = ";" &
```

```
// set width and height to 500px  
"img.width = img.naturalWidth;" &  
"img.height = img.naturalHeight;" )
```

And to scroll in the center position.

```
MBS("WebView.RunJavaScript"; "ImageContainer";
```

```
"document.body.scrollLeft = (document.body.scrollWidth - window.innerWidth)/2;" &  
"document.body.scrollTop = (document.body.scrollHeight - window.innerHeight)/2;")
```

This example is included with plugins.
